Nuclear Summer Louise Krasniewicz, 2018-03-15 No detailed description available for Nuclear Summer *Ethics for a Brave New World, Second Edition (Updated and Expanded)* John S. Feinberg, Paul D. Feinberg, 2010-11-04 Aldous Huxley's 1932 book *Brave New World* foresees a world in which technological advances have obliterated morality and freedom John Feinberg and Paul Feinberg in the first edition of *Ethics for a Brave New World* noted how Huxley landed frighteningly close to the truth Their book responded to ethical crises such as abortion euthanasia capital punishment and genetic engineering by looking to Scripture for principles to guide us through the moral quagmires of our time Now dramatically updated and expanded this edition of *Ethics for a Brave New World* seeks to maintain the relevance rigorous scholarship and biblical faithfulness of the first edition While many of the topics covered in the book remain the same John Feinberg has revised each chapter to keep it current with contemporary trends and to respond to the most recent scholarship There is a new chapter on stem cell research and greatly expanded material on issues such as homosexuality and genetic engineering This important resource will be a valuable guide for students and those seeking answers to ethical dilemmas **Monthly Energy Review**

, 1989 **Apocalyptic Ecology in the Graphic Novel** Clint Jones, 2020-03-16 As awareness of climate change grows so do the number of cultural depictions of environmental disaster Graphic novels have reliably produced dramatizations of such disasters Many use themes of dystopian hopefulness or the enjoyment readers experience from seeing society prevail in times of apocalypse This book argues that these generally inspirational narratives contribute to a societal apathy for real life environmental degradation By examining the narratives and art of the environmental apocalypse in contemporary graphic novels the author stands against dystopian hope arguing that the ways in which we experience depictions of apocalypse shape how we respond to real crises *American Anti-Nuclear Activism, 1975-1990* K. Harvey, 2014-10-28 Looking at national peace organizations alongside lesser known protest collectives this book argues that anti nuclear activists encountered familiar challenges common to other social movements of the late twentieth century Environmental Pollution S. V. S. Rana, 2006 *Environmental Pollution Health and Toxicology* offers a comprehensive account of environmental pollution environmental health and environmental toxicology While introducing different types of pollution it simultaneously describes their effects on ecosystems ecotoxicology man animals and plants Due emphasis has been given to recently emerging problems viz indoor air pollution ground water pollution and solid waste pollution It incorporates separate chapters on environmental toxicology of heavy metals pesticides insecticides and organic solvents The book is an invaluable resource for those studying environmental pollution ecology ecotoxicology epidemiology occupational health public health environmental chemistry medicine environmental engineering and other related disciplines Structure of the global catastrophe. The World's Worst Problems Walter

Dodds, 2019-12-02 This book addresses the worst problems currently facing humanity and those that may pose future threats The problems are explained and approached through a scientific lens and categorized based on data involving global mortality vulnerability and threat level The book presents indices of problem severity to compare relative intensity of current and potential crises The approach avoids emotional argument using mainly empirical evidence to support the classification of relative problem severity The author discusses multiple global problems and ranks them He also explores specific solutions to each problem links problems to human behavior from a social science perspective considers international cooperation and finally pathways to solutions The book discusses confirmation bias and why this necessitates a scientific approach to tackle problems The moral assumption that each person has the same rights to life and minimal suffering and that the natural world has a right to exist forms the basis of ranking problems based on death suffering and harm to the natural world A focus is given to potential disasters such as asteroid collisions and super volcanic eruptions which are then presented in chapters that address specific contemporary global issues including disease hunger nuclear weapons and climate change Furthermore the author then ranks the problems based on an index of problem severity considering what other people think the worst problems are The relative economic costs to solve each of these problems individual behavior in the face of these problems how people could work together internationally to combat them and a general pathway toward solutions form the basis of the final chapters This work will appeal to a wide range of readers students considering how they can help the world and scientists and policy makers interested in global problem solving

Peace Advocacy in the Shadow of War Francis Shor, 2024-01-05. For peace advocates, a corollary to Clausewitz's dictum that war is politics by other means might be that other politics could prevent war. By highlighting both individual peace advocates and antiwar peace organizations from World War I through the wars of the 21st century, the chapters will provide insights into how these individuals and organizations articulated their opposition to and mobilized against specific wars and international regional conflicts. Organized roughly in chronological order, each chapter will illuminate the socio-historical conditions under which such peace advocacy contested state aggression and armed combat at the national and/or transnational levels. Beyond understanding the specific socio-historical circumstances within which these antiwar and peace advocates and organizations operated and their resultant achievements and failures, the book as a whole will examine the kind of politics that perpetuate war and those that offer a challenge to that perpetuation. Scholars, students, and the general public interested in the history of modern and contemporary wars, peace, and conflict studies and ethical-political perspectives in the 20th and 21st centuries should find much to reflect upon in this book. **Engineering Education** American Society for Engineering Education, 1961.
