Numerical Modelling For Electromagnetic Non Destructive Evaluation:

Numerical Modeling for Electromagnetic Non-Destructive Evaluation N. Ida, 1994-12-31 This text on numerical methods applied to the analysis of electromagnetic nondestructive testing NOT phenomena is the first in a series devoted to all aspects of engineering nondestructive evaluation The timing of this series is most appropriate as many university engineering physics faculties around the world recognizing the industrial significance of the subject are organizing new courses and programs with engineering NOE as a theme Additional texts in the series will cover electromagnetics for engineering NOE microwave NOT methods ultrasonic testing radiographic methods and signal processing for NOE It is the intended purpose of the series to provide senior graduate level coverage of the material suitable for university curricula and to be generally useful to those in industry with engineering degrees who wish to upgrade their NOE skills beyond those needed for certification This dual purpose for the series reflects the very applied nature of NOE and the need to develop suitable texts capable of bridging the gap between research laboratory studies of NOE phenomena and the real world of certification and industrial applications The reader might be tempted to question these assertions in light of the rather mathematical nature of this first text However the subject of numerical modeling is of critical importance to a thorough understanding of the field defect interactions at the heart of all electromagnetic NOT phenomena Electromagnetic
