Recombinant Dna And Cell Proliferation:

Recombinant DNA And Cell Proliferation Gary Stein, 2012-12-02 Recombinant DNA and Cell Proliferation focuses on the use of recombinant DNA technology in investigating the regulation of cell proliferation Topics include gene transfer for assessing the role of defined DNA sequences in triggering DNA replication nucleic acid hybridization probes for analyzing the regulation of specific genes during the cell cycle and cloned DNAs for studying genes expressed with proliferation and differentiation This book is organized into three sections encompassing 13 chapters and begins with a discussion on the expression of specific genes during the cell cycle This text also deals with topics such as the use of cloned SV40 DNA fragments to examine signals for cell proliferation expression of dihydrofolate reductase and thymidylate synthase genes in mammalian cells and gene expression during the cell cycle of *Chlamydomonas reinhardtii* The following chapters explore the expression of histone genes during the cell cycle in human cells organization and expression of eukaryotic ribosomal protein genes and expression of the alpha fetoprotein gene during development regeneration and carcinogenesis This book also introduces the reader to the role of the cell division cycle in induced differentiation gene regulation in muscle cells regulation of nonmuscle actin gene expression during early development and sequences at ends of cellular DNA molecules in relation to telomere replication and function An overview of the biochemical aspects of cell proliferation and the genes and gene products that are necessary and specific for cell proliferation concludes the book This book will be of value both to advanced students and to research scientists

Growth Control During Cell Aging Eugenia Wang, Huber R. Warner, 2020-08-11 The purpose of this book is to provide information on senescent cells and why they are prevented from multiplying via cell division It includes main sections on the nature of G₀ 1 transition factors promoting the cell cycle traverse and avoiding the G₀ 1 arrest and negative factors arresting the cell cycle traverse and promoting the stay in the G₀ 1 stage Filled with illustrations and explanations it collectively presents the mechanisms that control the cellular aging process This reference is a must for anyone with special interests in the biological community and specifically the field of gerontology

Current Catalog National Library of Medicine (U.S.), 1985 First multi year cumulation covers six years 1965 70 **Animal Cell**

Technology: Basic & Applied Aspects H. Murakami, Sanetaka Shirahata, H. Tachibana, 2012-12-06 New data on animal cell technology are brought together in this volume with emphasis given to the basic characterization of cell lines The merits of different cell culture systems are examined and investigations into the factors influencing cell growth and productivity are presented A special section deals with the biological properties of proteins produced by engineered animal cells All those involved in the culture of animal cells will find this volume invaluable

Genetic Expression in the Cell Cycle G.M. Padilla, 2012-12-02 Genetic Expression in the Cell Cycle provides an understanding of the molecular mechanisms that govern the expression of genetic information during the cell cycle The initial five chapters describe the intimate relationships between the supramolecular complexes that form the basic structure of chromatin Emphasis is placed on the dynamics of

cycle dependent changes in the structural organization of some of these components Subsequent chapters demonstrate that small nuclear RNAs SnRNA are actively involved in gene regulation in eukaryotic cells discuss the relationship between cell cycle regulation in the yeast *Saccharomyces cerevisiae* and transcription of ribosomal RNA genes and describe the use of conditional lethal mutants to study the regulation of the cell cycle of eukaryotic cells The remaining chapters discuss the concepts and methodologies employed to isolate and study specific cell cycle mutants of *S. cerevisiae* the antiproliferative effect of interferon on cultured human fibroblasts and the role of cell membrane and related subcellular elements in the control of proliferation differentiation and cell cycle kinetics

Cell Cycle - Materials and Methods Michele

Pagano,2012-12-06 During their lifetime especially when growing and dividing cells go through various steps of the cell cycle Knowledge of the individual steps of the cell cycle will help us understand the development of a variety of diseases better including cancer and also to design new drugs against it New techniques for studying the molecular basis of these processes have recently been developed and are described in detail in this manual A glossary helps the reader to cope with the complex cell cycle terminology

Molecular Biology of B-Cell and T-Cell Development John G. Monroe, Ellen

Rothenberg,2013-03-14 Despite the tremendous diversity of the cells of the hematopoietic system they are all derived from common precursor cells that are generated in the fetus and persist into adult life In this regard B and T lymphocytes which comprise the two arms of the antigen specific and inducible immune system though functionally very different are descendants of the same stem cell precursor In the past several years we have witnessed an explosion of information regarding the process by which differentiation of B and T cells from stem cells occurs This information like the answers to most important biological questions has come from multiple and diverse directions Because all hematopoietic cells arise from common precursors complex regulatory processes must be involved in determining commitment to various lineages Understanding commitment to the B or T cell lineage remains incomplete however identification of transcription factors necessary for progression along specific B and T cell pathways suggests that we are on the verge of understanding the molecules involved in the initial fate determining steps Studies of this type previously could be accomplished only in nonmammalian systems that are more amenable to genetic approaches However new technologies allow increasingly elegant and informative studies in mammalian systems particularly for cells of the hematopoietic system

Route Maps in Gene Technology Mark

Walker,Ralph Rapley,2009-07-17 Route Maps in Gene Technology is an exciting new introductory textbook for first year undergraduates in molecular biology and molecular genetics The subject is broken down into 140 to 150 key concepts or topics each of which is dealt with in one doublepaged spread These range from basic introductory principles to applied topics at the cutting edge of research A control strip along the top of the page shows the student which pages need to have been read beforehand and which topics may be followed afterward In addition at the front of the book are a selection of routes

which the student or teacher may choose in order to study a particular topic Because courses have become more modular and many students arrive at college with little or no biology background this approach enables teachers and students to structure a course of study to best suit their disparate exposure to biology An exciting new concept in textbook design allowing unparalleled flexibility on the part of the student and the teacher Covers the full range of modern molecular biology from basic principles to the latest applications Attractive clear and simple presentation with copious two colour illustrations

Genetic Engineering Idah Sithole-Niang, 2013-05-22 The book while having only five chapters covers a wide range of topics in genetic engineering of microorganisms plants and animals Specifically it covers both the natural and social sciences In the natural sciences topics ranging from the genetic engineering of microorganisms to produce antibiotics the gene targeting and transformation in plants the generation of marker free plants in response to biosafety concerns as well as the generation of transgenic animals and those derived through cloning are covered In the social sciences the issue of ethics in biotechnology and the role of the media in reporting around the cloned sheep Dolly are discussed
