education and ways in which science is made more accessible. This will include the future potential of such current developments as access to practical work delivered on the web. The Reader is divided into three sections: What are the current issues in using ICT to teach and learn in science; Designing and evaluating ICT to teach and learn science; Extending access to science learning. This is a companion book to *Reconsidering Science Education*, also published by RoutledgeFalmer. *Mediating Science Learning Through ICT* is a valuable resource for teachers on Masters courses in science education and academics in science education.

*Online Science Learning: Best Practices and Technologies* Downing, Kevin, Holtz, Jennifer, 2008-05-31. The continued growth in general studies and liberal arts and science programs online has led to a rise in the number of students whose science learning experiences are web based. However, little is known about what is actually going on in web based science courses at the level of the disciplines within liberal arts and sciences or the corresponding course design features. *Online Science Learning: Best Practices and Technologies* reviews trends and efforts in web based science instruction and evaluates contemporary philosophies and pedagogies of online science instruction. This title on an emergent and vital area of education clearly demonstrates how to enrich the academic character and quality of web based science instruction.

**Rethinking Science Education** Roland M. Schulz, 2014-08-01. This book presents a philosophy of science education as a research field as well as its value for curriculum instruction and teacher pedagogy. It seeks to re-think science education as an educational endeavour by examining why past reform efforts have been only partially successful, including why the fundamental goal of achieving scientific literacy after several reform waves has proven to be so elusive. The identity of such a philosophy is first defined in relation to the fields of philosophy, philosophy of science, and philosophy of education. It argues that educational theory can support teacher's pedagogical content knowledge and that history, philosophy, and sociology of science should inform and influence pedagogy. Some case studies are provided which examine the nature of science and the nature of language to illustrate why and how a philosophy of science education contributes to science education reform. It seeks to contribute in general to the improvement of curriculum design and science teacher education. The perspective to be taken on board is that to teach science is to have a philosophical frame of mind about the subject about education about one's personal teacher identity.

*Investigative Science Learning Environment* Eugenia Etkina, David T. Brookes, Gorazd Planinšič, 2019-11-15. The goal of this book is to introduce a reader to a new philosophy of teaching and learning physics. *Investigative Science Learning Environment* or ISLE pronounced as a small island. ISLE is an example of an intentional approach to curriculum design and learning activities. MacMillan and Garrison 1988. *A Logical Theory of Teaching*. Erotetics and Intentionality. Intentionality means that the process through which the learning occurs is as crucial for learning as the final outcome or learned content. In ISLE, the process through which students learn mirrors the practice of physics.

Reconsidering Historical Epistemology Matteo Vagelli, 2024-06-27. This book explores the key conceptual stakes underpinning historical epistemology. The strong Anglophone interest in historical epistemology since at least the 1990s is

typically attributed to its simultaneously philosophical and historical synthetic approach to the study of science Yet this account considered by critics to be an unreflective assumption has prevented historical epistemology from developing a clear understanding and definition especially regarding how precisely historical and philosophical reflections on the sciences should be combined Thus this book uniquely analyses how the problems and tensions inherent to the contemporary phase of historical epistemology can be clarified by reference to the classical French phase The archaeological method of Michel Foucault which draws on and transforms fundamental insights by Gaston Bachelard and Georges Canguilhem is used to exert an enduring influence on the field especially through the work of Ian Hacking and his philosophical cum historical analyses of styles of scientific reasoning Though this book is of great value to academic specialists and graduate students the fact it addresses questions broad in scope ensures it is also relevant to a range of scholars in many disciplines and will provoke discussion among those interested in foundational issues in history and philosophy of science Vagelli's book provides a both unique and uniquely important window into historical epistemology and its relation to contemporary philosophy of science Unique because nowhere else can one find a single work that treats the range of topics that he covers Uniquely important because Vagelli's clear concise and comprehensive survey details key interrelationships among a range of American British and European views currently in play regarding historical epistemology and philosophy of science as well as the institutional and intellectual vectors driving their associated epistemological positions Paul Roth UC Santa Cruz USA Uneasily the history and philosophy of science have bolstered and undermined each other for all too long Would history offer nothing but potted episodes to confirm or contradict transhistorical claims about science Would philosophy dismantle uncritical historicist accounts of scientific discoveries Historical epistemology offers a more integrated path at once a history of the present and a philosophy of the past Matteo Vagelli draws together the insights of the Francophone Anglophone and Germanophone traditions to give us a sparkling lucid account of seeing our standards of scientific understanding as developing across time always asking how did we come to our standards of demonstration and argument Peter Galison Harvard University USA

**Reconsidering Canadian Curriculum Studies** Nicholas Ng-A-Fook, Jennifer Rottmann, 2012-09-24 Comprised of chapters written by established Canadian curriculum scholars as well as junior scholars and graduate students this collection of essays provoke readers to imagine the different ways in which educational researchers can engage the narrative inquiry within the broader field of curriculum studies

*Technology and Knowledge Flow* Guglielmo Trentin, 2011-08-05 This book outlines how network technology can support foster and enhance the Knowledge Management Sharing and Development KMSD processes in professional environments through the activation of both formal and informal knowledge flows Understanding how ICT can be made available to such flows in the knowledge society is a factor that cannot be disregarded and is confirmed by the increasing interest of companies in new forms of software mediated social interaction The latter factor is in relation both to the possibility of accelerating internal communication and problem solving processes and or in

relation to dynamics of endogenous knowledge growth of human resources The book will focus specifically on knowledge flow KF processes occurring within networked communities of professionals NCP and the associated virtual community environments VCE that foster horizontal dynamics in the management sharing and development of fresh knowledge Along this line a further key issue will concern the analysis and evaluation techniques of the impact of Network Technology use on both community KF and NCP performance The proposal of a taxonomy of Network Technology uses to support formal and informal knowledge flows Analyses how Web 2 0 and Web 3 0 technology is deeply modifying the dynamics connected to KF and KM Discusses dynamics underlying horizontal KF sharing processes within NCP
