Report prepared by

National Institute of Standards and Technology,
Gaithersburg, MD 20899

The National Computer Systems Laboratory (NCSL) of the National Institute of Standards and Technology (NIST) and the National Computer Security Center (NCSC) of the Department of Defense (DoD) co-sponsored the Twelfth National Computer Security Conference held in Baltimore, Maryland on October 10-13, 1989. The theme of the conference, "Information Systems Security: Solutions for Today—Concepts for Tomorrow," highlighted the broader focus of information systems security which now challenges the user community, vendors, system developers, and administrators. Major areas addressed included advanced research developments and emerging technologies, network security architectures, risk management, management and administration issues in computer security, and an expanded focus on education and ethics. More than 2,000 attendees from government, industry, and academia participated in the 4-day conference, which was co-chaired by NCSL's Irene Gilbert and NCSC's George Mitchell.

1. History of the Conference

The National Computer Systems Laboratory has played a vital role in protecting the security and integrity of information in government computer systems through its Computer Security Program since the passage of the Brooks Act in 1965. Since 1972, the Laboratory has issued standards and guidelines on the cost-effective protection of unclassified information in computer systems. NCSL works with organizations from government, industry, academia, and voluntary standards groups to develop standards and guidance, produce tests to evaluate conformance to standards, transfer technology to users, and provide technical assistance to government and industry in computer security applications. The Computer Security Act of 1987 strengthened NCSL's role in protecting unclassified sensitive information in federal computer systems.

The Department of Defense also has pursued an active computer security program over many years. In 1978, the Assistant Secretary of Defense for Communications, Command, Control and Intelligence established a Computer Security Initiative to ensure the widespread availability of trusted ADP systems within the DoD community. In 1981, the National Computer Security Center was created to administer the activities of the initiative. NCSC advances the development of trusted computer systems and publishes guidelines on computer security. In response to the increased emphasis on computer security in recent years, NCSC expanded its efforts to support basic research for the development of additional trusted systems. NCSC's technology transfer program ensures that other federal agencies and industry benefit from technological advances in computer security.

Felix Wu, 2003-06-26 Since 1998 RAID has established its reputation as the main event in research on intrusion detection both in Europe and the United States Every year RAID gathers researchers security vendors and security practitioners to listen to the most recent research results in the area as well as experiments and deployment issues This year RAID has grown one step further to establish itself as a well known event in the security community with the publication of hardcopy proceedings RAID 2000 received 26 paper submissions from 10 countries and 3 continents The program committee selected 14 papers for publication and examined 6 of them for presentation In addition RAID 2000 received 30 extended abstracts proposals 15 of these extended abstracts were accepted for presentation tended abstracts are available on the website of the RAID symposium series <http://www.raid-symposium.org> We would like to thank the technical program committee for the help we received in reviewing the papers as well as all the authors for their participation and submissions even for those rejected As in previous RAID symposiums the program alternates between fundamental research issues such as new technologies for intrusion detection and more practical issues linked to the deployment and operation of intrusion detection systems in a real environment Five sessions have been devoted to intrusion detection technology including modeling data mining and advanced techniques Security for Software Engineers James N. Helfrich, 2018-12-17 Security for Software Engineers is designed to introduce security concepts to undergraduate software engineering students The book is divided into four units each targeting activities that a software engineer will likely be involved in within industry The book explores the key areas of attack vectors code hardening privacy and social engineering Each topic is explored from a theoretical and a practical application standpoint Features Targets software engineering students one of the only security texts to target this audience Focuses on the white hat side of the security equation rather than the black hat side Includes many practical and real world examples that easily translate into the workplace Covers a one semester undergraduate course Describes all aspects of computer security as it pertains to the job of a software engineer and presents problems similar to that which an engineer will encounter in the industry This text will equip students to make knowledgeable security decisions be productive members of a security review team and write code that protects a user's information assets

Information Security Management Systems Heru Susanto, Mohammad Nabil Almunawar, 2018-06-14 This new volume Information Security Management Systems A Novel Framework and Software as a Tool for Compliance with Information Security Standard looks at information security management system standards risk management associated with information security and information security awareness within an organization The authors aim to improve the overall ability of organizations to participate forecast and actively assess their information security circumstances It is important to note that securing and keeping information from parties who do not have authorization to access such information is an extremely important issue To address this issue it is essential for an organization to implement an ISMS standard such as ISO 27001 to address the issue comprehensively The authors of this new volume have constructed a novel security framework ISF and subsequently used this framework to develop software called Integrated Solution Modeling ISM a semi automated system that will greatly help organizations comply with ISO 27001 faster and cheaper than other existing methods In addition ISM does not only help organizations to assess their information security compliance with ISO 27001 but it can also be used as a monitoring tool helping organizations monitor the security statuses of their information resources as well as monitor potential threats ISM is developed to provide solutions

to solve obstacles difficulties and expected challenges associated with literacy and governance of ISO 27001 It also functions to assess the RISC level of organizations towards compliance with ISO 27001 The information provide here will act as blueprints for managing information security within business organizations It will allow users to compare and benchmark their own processes and practices against these results shown and come up with new critical insights to aid them in information security standard ISO 27001 adoption Publications of the National Institute of Standards and Technology ...
