Native American Scientists:

Native American Scientists Jetty St. John, 1996-03 Lively informative text provides a fascinating look at creative people and their scientific work Each of these volumes contains five brief profiles Personalities profiled include African American scientists Native American scientists Hispanic scientists and African American inventors Each book contains an index bibliography glossary **Science and Native American Communities** Keith James, 2001-01-01 Education among American Indians has lagged behind that of almost all other groups in both the United States and Canada and it generally has not offered what Indian communities need It is this disturbing state of affairs along with the intractable realities unexamined assumptions and cultural conflicts and misunderstandings behind it that **Science and Native American Communities** confronts Representing an unprecedented gathering of Native American professionals working in the sciences and advanced technology the book combines theory and practice firsthand experience and strategic thinking in a provocative exploration of the uneasy meeting ground between science and Native American communities In highly personal deeply informed and frequently moving essays the authors wrestle with a legacy of mistrust and violence They ask Is a common ground between science and Native America possible The problems and prospects that emerge from such a meeting and that these essays address include the impact of science and technology on Native lands and environment economic and technological opportunities and challenges for reservation communities and the differences and similarities between Native and scientific thought and practice The authors not only showcase different reactions to the consequences of science but also energetically propose strategies for renegotiating Native communities relationships with science seizing control of their destinies and moving forward in the twenty first century **U.S. Scientists and Engineers** ,1986 **Women and Minorities in Science and Engineering** ,1992 *Women and Minorities in Science and Engineering* Michael F. Crowley, National Science Foundation (U.S.), 1986 **Patronage, Practice, and the Culture of American Science** Hugh Richard Sloten, 1994-06-24 In this book Hugh Richard Sloten explores the institutional and cultural history of science in the United States The main focus is on the activities of Alexander Dallas Bache great grandson of Benjamin Franklin and the acknowledged chief of the American scientific community during the second third of the nineteenth century Bache played a central role in the organization and management of a number of key scientific institutions including the American Association for the Advancement of Science the Smithsonian Institution and the National Academy of Sciences But his dominance in these institutions was made possible through his control of an organization less well known today the United States Coast Survey which he superintended from 1843 until his death in 1867 Under Bache's command the Coast Survey became the central scientific institution in antebellum America Using richly detailed archival records Sloten pursues an analysis of Bache and the Coast Survey that illuminates important historiographic themes We gain a better understanding of the particular style of nineteenth century American science by examining the role of the Coast Survey as a source of patronage

Perhaps most important this study explores the ways in which scientific knowledge and practice are embedded within local contexts Although Bache sought to use the Coast Survey to raise the status of American science partly by emulating European scientific elites his efforts also reflected the cultural and political values of antebellum America Sloten thus analyzes the interrelationship between political culture patterns of patronage and the institutional practice of science in the United States

Douglas L. Medin,Megan Bang,2014-01-03 Analysis and case studies show that including different orientations toward the natural world makes for more effective scientific practice and science education The answers to scientific questions depend on who s asking because the questions asked and the answers sought reflect the cultural values and orientations of the questioner These values and orientations are most often those of Western science In Who s Asking Douglas Medin and Megan Bang argue that despite the widely held view that science is objective value neutral and acultural scientists do not shed their cultures at the laboratory or classroom door their practices

reflect their values belief systems and worldviews Medin and Bang argue further that scientist diversity the participation of researchers and educators with different cultural orientations provides new perspectives and leads to more effective science and better science education Medin and Bang compare Native American and European American orientations toward the natural world and apply these findings to science education The European American model they find sees humans as separated from nature the Native American model sees humans as part of a natural ecosystem Medin and Bang then report on the development of ecologically oriented and community based science education programs on the Menominee reservation in Wisconsin and at the American Indian Center of Chicago Medin and Bang s novel argument for scientist diversity also has important implications for questions of minority underrepresentation in science
