Nato Advanced Study Institutes Series The Continental Permian In Central West And South Europe:

The Continental Permian in Central, West, and South Europe H. Falke, 1976-08-31 Geological research on the continental Permian in West Central and South Europe has been neglected in the former days. Nevertheless, interest in it increased in the last twenty years and became important owing to the problems connected with continental sedimentation and also because of the important discoveries of oil gas and uranium deposits. Therefore, detailed investigations in all countries where continental Permian appears have been made with the help of boreholes. These investigations included sedimentation basins in which the above mentioned deposits are not expected. Consequently, the numerous results received in connection with still unanswered questions led to the idea to invite the specialists to a meeting. The first meeting was held in Pisa 1966 and a further one in Vienna 1969. Both conferences exclusively dealt with the deposits of the Verrucano province both in the Alps and Apennines. With respect to the importance of such meetings, a further one was intended to be arranged in Mainz dealing with the whole continental Permian in West Central and South Europe. With financial help of the NATO Scientific Affairs Division, this meeting could be arranged as a NATO Advanced Study Institute.

The Geology of Egypt Farouk El Baz, 1984-01-01

The British Seas Jack Hardisty, 2024-04-03 Originally published in 1990 and designed as a student text. The British Seas is a clear introduction to the oceanography and resources of the region. It is unique in providing a detailed review of the resources of the north west European continental shelf together with a comprehensive description of the environment. Introducing the shelf region as if it were a new country, Jack Hardisty explores first its physical environment and then summarizes the distribution and exploitation of resources from the environment. Part 1 on the oceanography covers the shape of the shelf, its geological history and its wave and tidal regimes. Part 2 on the resources looks at trade and shipping and the hydrocarbon, fishing and seabed mining industries. It goes on to discuss wave and tidal power and to consider the problem of pollution in terms of resource utilization. The industrial technology and the environmental potential of each resource are examined and the economic and legislative restrictions are analysed.

The Encyclopedia of the Solid Earth Sciences Philip Kearey, 2009-07-17 From AMETHYST to ARTESIAN SPRING, from COAL GAS to CONTINENTAL DRIFT, from SEISMOGRAM to STROMATOLITE, the Encyclopedia of the Solid Earth Sciences provides a comprehensive modern reference text for all the subdisciplines of the Earth Sciences. The Encyclopedia is primarily intended for professional earth scientists and those specializing in related subjects. However, it will also provide an important reference for students of the Earth Sciences and those needing information on terms in current usage. The book contains three main styles of entry: articles up to 1500 words on major topics such as plate tectonics; standard entries of up to a couple of hundred words on topics such as groups of minerals; and brief definitions of, for instance, individual minerals.

Triassic-Jurassic Rifting W. Manspeizer, 2015-08-26 Extensive field studies on the African and North American plates during this past decade have yielded a wealth of new data and ideas about rift

basins and the origin of passive margins New surface and subsurface basins have been identified fossils abound in strata that only recently were considered barren oil exploration is being actively pursued in continental strata of the Richmond Taylorsville Sanford and Newark basins Late Triassic marine strata have been identified in Georges Bank off the coast of Massachusetts and the roles of wrench tectonics successor basins and listric normal faults have challenged the classical view that these are simple extensional basins This two part work brings together representative examples of these studies It is not intended as an exhaustive synthesis of the subject but rather a vehicle to present new data new ideas and alternative views Some of the papers present regional summaries others attempt to relate local features to regional questions while others describe modern rift basins as possible analogs of early Mesozoic basins Geologic data from the Atlantic passive margins record that continental rifting of central Pangaea occurred during the latest Triassic earliest Jurassic Liassic and that sea floor spreading probably began no later than the Middle Jurassic The primary subject of this book focuses on the Triassic Jurassic rifting events that led to the breakup of Pangaea and the opening of the central Atlantic Ocean Whereas other treatises have focused on the origin of the passive margins inferred primarily from geophysical data of the offshore basins this volume primarily and uniquely focuses on land based field studies of the onshore synrift basins Offshore studies of synrift basins are also included and add substantially to our understanding of the breakup However the onshore data base while complementary is different thus providing researchers with a different insight to the questions at hand The book is organized into four sections Section I Pangaeon Plate in Time and Space first locates Pangaea in space and then places the Triassic basins within an historical context on the Alleghanian Variscan Orogens Section 2 the offshore and onshore basins of the North American and African Plates comprises about 70% of all papers in this book and includes papers on structural geology petrology paleontology sedimentation organic geochemistry vulcanism and mineral resources Section 3 Related Mesozoic Atlantic Rift Basins includes papers on Iberia Western Europe the Benue Trough and Brazil The final section of the book Analogs includes the rift basins of East Africa the Red Sea the Gulf of Elat Aqaba the Dead Sea and the Rio Grande The book is richly illustrated throughout with figures photographs tables and fold out maps including nine in full colour

Coastal Lowlands W.J.M. van der Linden, S.A.P.L. Cloetingh, J.P.H. Kaasschieter, J. Vandenberghe, W.J.E. van de Graaff, J.A.M. van der Gun, 2013-04-17 Coastal Lowlands by virtue of their position across the boundary of land and sea belong to the earth's most dynamic systems This is true in the physical i.e. geological and biological as much as in the cultural and social sense Although the nearness to the sea was and still is fraught with danger coastal lowlands have always attracted human interest providing challenging opportunity holding the promise of profitable enterprise Coastal lowlands especially where rivers enter the region are the cradles of great civilisations and there of old populations reached highest densities As an example Dutch history is a tale of human struggle and endeavour with and against the sea Dutch lowlanders wrestled their land from the sea in turn the sea forged a nation of independent fishermen navigators farmers and traders who built their towns and ships

at the borders of the North and Zuyder Seas As lowlands subside and sea level rises apparently these days at an increasing rate concern about this environment world wide is also rising It certainly was appropriate and timely for the Royal Geological and Mining Society of the Netherlands when celebrating its 75th birthday to organize and call together a symposium focussing attention on the geology and geotechnology of coastal lowlands geology to better understand their formation and evolution geotechnology to better manage and harvest resources as much as protect a unique and crucial environment

Permo-carboniferous Magmatism and Rifting in Europe B. Marjorie Wilson, 2004 Catalogs of the Scripps Institution of Oceanography Library Scripps Institution of Oceanography. Library, 1980 *The Urach Geothermal Project, (Swabian Alb, Germany)* Ralph Haenel, 1982 World demand for energy is currently increasing by about 5% every year Though this rate may diminish somewhat in the future reserves of fossil fuel are continuously decreasing The research for new and alternative sources of energy during the last decade has created great interest in geothermal energy The huge reservoir of geothermal energy is practically inexhaustible but in most cases its economic extraction presents formidable difficulties The estimated contribution of geothermal energy to world energy production is less than 1% Every opportunity should be taken to exploit geothermal energy and thus to reduce man's dependence on hydrocarbons and coal The present volume summarizes the results of these investigations and contains a considerable amount of new information It should be mentioned that the Urach project has encouraged other communities to look into the possibility of using local geothermal energy for heating purposes The practical experience obtained from this first large scale research project on geothermal energy to be carried out in the Federal Republic of Germany will provide other communities and the government too with valuable basic data for future geothermal studies Petroleum Geology of the North Sea K. W. Glennie, 2009-06-29 Since the 3rd edition of this publication emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources This change is reflected in this new 4th edition which has been significantly expanded to accommodate additional material The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea **Mémoires** France.
