Gee, Alison Vogelaar, 2018-07-04 The turn of the 1960s 70s characterized by the rapid acceleration of globalization prompted a radical transformation in the perception of urban and natural environments The urban revolution and related prospect of the total urbanisation of the planet in concert with rapid population growth and resource exploitation instigated a surge in environmental awareness and activism One implication of this moment is a growing recognition of the integration and interconnection of natural and urban entities The present collection is an interdisciplinary inquiry into the changing modes of representation of nature in the city beginning from the turn of the 1960s 70s Bringing together a number of different disciplinary approaches including architectural studies and aesthetics heritage studies and economics environmental science and communication the collection reflects upon the changing perception of socio natures in the context of increasing urban expansion and global interconnectedness as they are were manifest in specific representations Using cases studies from around the globe the collection offers a historical and theoretical understanding of a paradigmatic shift whose material and symbolic legacies are still accompanying us in the early 21st century **Climate Change in the Age of Artificial Intelligence** Alexandru Balasescu, 2025-06-14 This book invites the reader to follow seemingly unrelated paths towards the same goal making sense of what it means to be human in a world that casually blends discourses on nature technology and biology with ideas of progress optimization and their capitalization at the centre The author critically analyses current thinking which often looks at technological solutions to the challenges posed by climate change and where artificial intelligence is instrumental in fulfilling the promise of ecological capitalism He instead advocates that we take a closer look at the politics of optimization within and outside managerial perspectives which could reveal that one of the main sources of our repeated failures related to governance and climate change lies not intrinsically in the qualities of the tools we use but in the underlying assumptions with which we design and in the scope of their use Therefore the book looks at possible solutions for humanity that may lie between the rock of technology and the hard place of nature That is it asks for a revision in our implicit assumptions for building our tools critiques the thinking about our relationships with them and re assesses their use Richly documented imaginatively argued and captivantly written this book explores unexpected entanglements of nature culture and technology that emerge in A I s unruly and unforeseen trajectories George Paul Meiu Professor of Anthropology University of Basel Balasescu develops wide ranging thick descriptions that provocatively draw together lotus flowers and data banks snakes and algorithms to delve into how bodies cultures and power are invisibly ensconced in every aspect of the digital realm Susan Ossman Distinguished Professor of Anthropology University of California Riverside This important work traces the evolution and development of the paradigms that made artificial intelligence possible and perhaps even inevitable Guy Nasmyth Associate faculty Royal Roads University Alec Balasescu skillfully broadens our horizons for not just nuanced

thinking and diverse ways of knowing but in a fast changing landscape how we might more consciously choose to act and relate to nature Wanda Krause award winning author program head Global Leadership and associate professor Royal Roads University **Nature** Sir Norman Lockyer,1902 **Francis Hutcheson: An Inquiry Concerning Beauty, Order, Harmony, Design** F. Hutcheson,2012-12-06 THE SENSE OF BEAUTY A FIRST APPROXIMATION It is generally acknowledged that during the first half of the eighteenth century a profound change was wrought in the theory of art and natural beauty To this period we owe the establishment of the modern system of the arts 1 In England the notion of a separate and autonomous discipline devoted solely to art and to beauty came into being through the concept of aesthetic disinterestedness 2 In addition emphasis in the theory of art shifted from object to subject from the work of art to the perceiver and critic Focal point for this change was the sense of beauty which in concert with the moral sense of the British school represented a dominant force in Enlightenment value theory It is Francis Hutcheson who more than anyone else can be thought of as the founder and principal spokesman of this philosophical coterie If the aesthetic sense was instrumental in the transfer of interest in the philosophy of art from object to perceiver the aesthetic and moral senses together were no less important in a parallel transference of value judgment from the rational to the sensitive **Handbook of Bottom Founded Offshore Structures** Jan H. Vugts,2013-12-01 Offshore Engineering continues to develop and expand rapidly While in the public eye its focus has shifted towards subsea and floating developments in ever deeper waters bottom founded structures are still at the industry's heart The fixed structure remains its dependable workhorse and even today newly installed fixed structures far outnumber subsea and floating applications Additionally the knowledge and technology that have literally pushed the boundaries of Offshore Engineering into ever more demanding environments and water depths have been largely pioneered by bottom founded structures An engineer's central skill is to develop coherent and balanced models for the problems encountered Regrettably due to availability of ever more sophisticated computer applications this expertise is at risk of getting lost and adopting computer outcomes without truly understanding the models and their limitations is naive risky and unprofessional Therefore every engineer needs fundamental knowledge and understanding of underlying theories and technologies This Handbook is intended to help offshore engineers acquire and sustain relevant expertise in some notoriously difficult subjects It attempts to stimulate reflection and critical evaluation of the models used and the strengths and weaknesses of the solutions found While dealing more specifically with bottom founded structures the material is generally applicable to offshore structures of all types The Handbook can be used as a textbook for Master's students and as a manual and reference guide for practising professionals **The Publishers' Circular and Booksellers' Record** ,1928
