Natural Gas for Vehicles in Canada Brian D. Sumner, 1985 From the Executive Summary This report compares the NGV markets in Italy New Zealand the United States and Canada with the emphasis on identifying reasons why natural gas is an attractive fuel for vehicles in Italy and New Zealand while apparently much less so in the U S and Canada Identifying the reasons for low NGV penetration in Canada suggests means by which NGV can be made more competitive with conventional sources of transportation energy The research has indicated that serious obstacles have so far prevented NGV from becoming the fuel of choice for many potential vehicle convertors. These include fuel price differential uncertainty high vehicle conversion costs high compression equipment costs tough competition from propane a demonstrated lack of government vehicle conversion commitment a low key marketing effort certain institutional barriers to NGV use and lack of technological developments Towards a Continental Natural Gas Market Kevin J. Brown, 1988 Study reviews the market forces providing impetus for deregulation in Canada and the US discusses the deregulatory initiatives taken to date in both countries problems that are being encountered in their implementation and their impact on the marketplace and describes the basic structure of the gas industry from a supply demand perspective Also presents a long term appraisal of the future development prospects for the Canadian gas industry within the increasingly integrated North American gas market including future gas prices in domestic and US markets the identification of future export markets both locationally and volumetrically the need for new or expanded pipeline facilities to serve new or incremental export and or domestic markets the adequacy of conventional gas supplies to meet future demand and the timing of unconventional and frontier gas production to augment these supplies Continental Natural Gas Market Leonard Arthur Coad, David H. Maerz, Canadian Energy Research Institute, 1989 Report on the level and timing of pipeline capacity additions that will best serve long term requirements for natural gas trade between Canada and the U S A fundamental determinant in the analysis is the resource base believed to exist within the various supply regions in North America. The findings are divided into those affecting markets in California the U S Midwest and the U S Northeast and the impacts of alternative resource base assumptions

Oil and Gas Finding Cost in Alberta, 1970-1985 Janice L. Pasay, Canadian Energy Research Institute, 1987 The primary purpose of this report is to provide estimates of hydrocarbonfinding costs for Alberta for the 1970 to 1985 period The methodologyemployed and the major results are summarized Canadiana, 1987 Canadian Books in Print, 2000 An Evaluation of Crude Oil Supply in Saskatchewan James N. Tanner, 1987 The recent volatility of crude oil prices has raised concerns over the volume of oil which can be expected to be discovered in the various supply regions in Canada This study focuses on the likely implication of crude oil volatility on future oil supply from Saskatchewan The study constructed a model to help analyze the effects of price changes on established reserves and also reserve additions from both new discoveries and extensions of older pools The model uses the provincial well data base and research on the royalty rates taxes and operation

costs in Saskatchewan to analyze the effects of price changes on established reserves defined as short run supply over a 19 year period The long run analysis includes both current established reserves and reserves which are likely to be discovered Critical Issues in Electric Power Planning in the 1990s K. Morgan MacRae, Canadian Energy Research in the future Alternative Transportation Fuels Michelle Heath, Canadian Energy Research Institute, 1991 In early 1990 a Institute, 1989 study was undertaken to examine and compare the usefulness of natural gas propane methanol and ethanol in relation to gasoline and diesel fuel for potential use in the transportation industry. The study evaluated the potential environmental and economic benefits of each of the fuels examined including the characteristics of each alternative fuel the current and proposed regulations and emission requirements for the vehicle fleet the use of alternate fuels internationally and conversion scenarios for each fuel Canadian Books in Print. Author and Title Index ,1975 The Effect of the Western Accord and Recent Provincial Royalty Changes on Petroleum Industry Capital Expenditures Janice L. Pasay, 1986 This report presents the results of a January 1986 survey of oiland gas companies regarding the impact of the Western Accord and provincial royalty changes introduced in 1985 on their capital expenditure intentions. The results presented here do notrepresent a forecast of capital expenditures but rather providean indication of the capital investment intentions of the oil andgas industry prior to the dramatic decline in world oil pricesand of how those intentions were influenced by the Western Accordand the provincial government royalty changes Energy Research Abstracts ,1989 **Energy Abstracts for** Fuel Cells in the Waste-to-Energy Chain Stephen J. McPhail, Viviana Cigolotti, Angelo Policy Analysis ,1989-07 Moreno, 2012-01-04 As the availability of fossils fuels becomes more limited the negative impact of their consumption becomes an increasingly relevant factor in our choices with regards to primary energy sources. The exponentially increasing demand for energy is reflected in the mass generation of by products and waste flows which characterize current society s development and use of fossil sources The potential for recoverable material and energy in these ever increasing refuse flows is huge even after the separation of hazardous constituent elements allowing safe and sustainable further exploitation of an otherwise wasted resource Fuel Cells in the Waste to Energy Chain explores the concept of waste to energy through a 5 step process which reflects the stages during the transformation of refuse flows to a valuable commodity such as clean energy By providing selected integrated alternatives to the current centralized wasteful fossil fuel based infrastructure Fuel Cells in the Waste to Energy Chain explores how the concept of waste to energy can be constructed and developed into a realistic solution The entire spectrum of current and future energy problems is illuminated through the explanation of the operational integration and marketing implications of high efficiency technological solutions using the real context of developed regions such as Europe Up to date reviews are provided on the status of technology and demonstration implementation and marketing perspectives The detailed technological information and insight gathered from over twenty years of experience in the field makes Fuel Cells in the Waste to Energy Chain a valuable resource for all engineers and researchers in the fields of
