Export Product Quality, Renewable Energy, and Sustainable Production Umer Shahzad, Gagan Deep Sharma, Lianbiao Cui, John Mendy, 2023-09-12 Economic development has long been acknowledged for its beneficial effects on human well being. In the context of economic globalization and vertical specialization, increasing the quality of export products is more critical and necessary to export success and sustainable development. The product's quality is inextricably linked to its manufacture and production, which need various types of energy and raw materials. Meanwhile, the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production. Therefore, product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources, sustainable production, and environmental regulations, as well as the nature of export competitiveness. Generally, export product quality has referred to the quality of manufactured products within the product lines. Quality refers to the relative price of a country's varieties within their respective product lines. Product sophistication assesses the composition of the aggregate exports. Different varieties of same product at per quality level are being produced by several developing and emerging economies. Within any given product line, quality converges both conditionally and unconditionally to the world's benchmark. Increases in institutional quality and human capital are associated with faster quality upgrading. In turn, faster growth in quality is associated with more rapid output growth. Vital Signs 2001-2002 Worldwatch Institute, 2014-04-08 This annual volume from the Worldwatch Institute gives prominence to key trends that too often escape the attention of the news media, world leaders, and economic experts. By distilling 45 vital signs of our times from thousands of government, industrial, and scientific sources, the volume allows readers to track key indicators that show social, economic, and environmental progress or the lack of it. Each trend is presented in both text and graphics. **Disaster Resilience and Sustainability** Sangam Shrestha, Riyanti Djalante, Rajib Shaw, Indrajit Pal, 2021-06-24 Disasters undermine societal well-being, causing loss of lives and damage to social and economic infrastructures. Disaster resilience is central to achieving the 2030 Sustainable Development Goals, especially in regions where extreme inequality combines with the increasing frequency and intensity of natural disasters. Disaster risk reduction and resilience requires participation of a wide array of stakeholders, ranging from academicians to policy makers to disaster managers. *Disaster Resilient Cities: Adaptation for Sustainable Development* offers evidence-based problem-solving techniques from social, natural, engineering, and other disciplinary perspectives. It connects data research, conceptual work with practical cases on disaster risk management, capturing the multi-sectoral aspects of disaster resilience, adaptation strategy, and sustainability. The book links disaster risk management with sustainable development under a common umbrella, showing that effective disaster resilience strategies and practices lead to achieving broader sustainable development goals. Provides foundational knowledge on integrated disaster risk reduction and management to show how resilience and its associated concept, such as adaptive and transformative strategies, can foster sustainable development. Brings together disaster risk reduction and resilience scientists.
