Environmental Change in Mountains and Uplands Martin Beniston, 2016-05-06 Mountain environments are often perceived to be austere isolated and inhospitable In fact these areas are of immense value to mankind providing direct life support to close to 10 percent of the

world's population and sustaining a wide variety of species many of which are endemic to this environment Environmental Change in Mountains and Uplands provides detailed account of the fragile and marginal physical and socio economic systems which make up the world's mountain regions Discussing the direct and indirect impacts of human interference on environmental ecosystems it then turns to the social and economic consequences of such environmental change both upon the mountain environment itself and upon the populations who depend on mountain resources for their economic sustenance This book includes a review of possible implications for adaption and mitigation strategies in a global context Working within a broad temporal scale it draws upon paleoenvironmental records to document past changes which have occurred in the absence of major anthropogenic influences as well as utilising modelling as a means to assessing future environmental change

*Late Quaternary Environmental Change* Martin Bell,M.J.C. Walker,2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment

Berkhout, 2003-01-01 The ESRC GEC programme has made a major contribution in terms of environmental social science research The chapters in this book provide incisive detailed and reflective critiques of the development of knowledge over the last ten years and provide powerful and important messages about the challenges presented by the complex relationship between environmental and social change The book should be essential reading for all researchers and also for all policymakers who are grappling with questions about how to respond to environment society controversies Judith Petts Birmingham University UK and Member of the Royal Commission on Environmental Pollution Global environmental change will be with us forever But how it happens in

the future and with what effect on the planet and its peoples depends to a large extent on how the international agreements national politics and local actions play out This collection provides the most comprehensive assessment yet of these critical interconnections and reveals how social scientists are making an invaluable contribution to the creation of more science and just livelihoods in a future world Tim O Riordan University of East Anglia UK An aphrodisiac to the tepid response of positivist social science People are not merely actors perpetrators and victims in an environmental drama The critical social theorists in this book constructively show us how people are improvising the stage and the script as we update our understanding of nature what constitutes a good life and our individual and collective options Richard B Norgaard University of California Berkeley US Negotiating Environmental Change is a child of the ESRCs Global Environmental Change Programme by far the biggest piece of work by social scientists in the United Kingdom during the 1990s At the beginning of the twenty first century the balance sheet needs to be drawn up what do our policies insights and values owe to the collaborative efforts of social scientists This book suggests that ideas and approaches that were conceived at a time when the Ozone Hole Global Warming and Biodiversity Losses were beginning to resonate in academic and policy circles have now entered the British and European psyche The challenge of forward thinking in the twenty first century in which the environment is central to most of the issues that concern social science is to demonstrate that the environment is not a separate territory Environmental thinking and practice affects us in various guises governance and democracy business and management risk and everyday consumption the substance of this book Negotiating Environmental Change makes clear the contribution that new thinking is making to problems that were not looked upon as environmental a decade ago but which we now see as being at the forefront of global research and policy agendas Michael Redclift King s College London UK Major advances have been made recently in environmental social science but the context and importance of this research has also changed Social and natural science studies of the environment have begun to interact more closely with each other and many analysts now agree that an understanding of environmental problems often depends on an understanding of the attitudes and behaviour of people and organisations Moreover policy and public debates have also shown that many assumptions that underpin arguments about sustainable development need to be reconsidered and re framed This book by leading researchers presents a critical review of debates in environmental social science over the past decade Three broad areas are covered in ten chapters the problems of scientific uncertainty and its role in shaping environmental policy and decisions the development of institutional frameworks for governing natural resources and the link between economic and technological change and the environment The book begins with an overview essay exam **Natural Climate Variability and Global Warming** Richard W. Battarbee, Heather A. Binney, 2009-01-26 Whilst there is now overwhelming evidence that greenhouse gas pollution is becoming the dominant process responsible for global warming it is also clear that the climate system varies quite naturally on different time scales Predicting the course of future climate change consequently requires an understanding

of the natural variability of the climate system as well as the effects of human induced change This book is concerned with our current understanding of natural climate change its variability on decadal to centennial time scales the extent to which climate models of different kinds simulate past variability and the role of past climate variability in explaining changes to natural ecosystems and to human society over the later part of the Holocene The book highlights the need to improve not only our understanding of the physical system through time but also to improve our knowledge of how people may have influenced the climate system in the past and have been influenced by it both directly and indirectly This ground breaking text addresses predictable modification in the climate system in the context of global warming Ideal for researchers and advanced students it explores current thinking on natural climate change Addresses the natural variability of the climate system in the context of global warming Contributes substantially to the ongoing discussion on global warming Integrates state of the art research and brings together modeling and data communities in a balanced way Considers questions of climate change on different time scales Natural climate variability and global warming is clearly an important book well focused and distinctive with fundamental things to say about Holocene science and its interface with the practical problem of global warming It is an authoritative up to date summary and synthesis of current knowledge in this area and is attractively produced with clear colour illustrations throughout It is a must for all university libraries and our private book collections The Holocene 2009

**Natural environment white paper** Great Britain: Parliament: House of Commons: Environment, Food and Rural Affairs Committee, 2012-07-17 The Environment Food and Rural Affairs Committee express concern that more than one year on from publication of the natural environment white paper The Natural Choice securing the value of nature Cm 8082 ISBN 9780101808224 Defra has failed to set out clear plans to ensure that government decision making fully values the services nature provides All government policy should fully value natural capital Government Ministers must also publish an action plan with a timetable to deliver each of the White Paper's 92 commitments give planners and developers guidance on how the National Planning Policy Framework can be used to protect Nature Improvement Areas fully assess the benefits and costs of environmental regulation to prevent a perception that environmental protection imposes a drag on the UK economy publish the Government's response to advice from the Natural Capital Committee The report also concludes that biodiversity offsetting can deliver positive impacts on the natural environment the target to end all peat use by 2030 shows a lamentable lack of ambition and a review of progress must be brought forward to 2014 Defra must set a target to increase public engagement with nature since local authorities NGOs and charities can only secure funding for environmental projects when they can demonstrate measurable success the Department for Health and the Department for Education must define measurements which demonstrate how greater public engagement with nature delivers gains in public health and educational attainment the entire coastal path around England should be in place within 10 years Identity and the Natural Environment Susan Clayton, 2003-11-07 The often impassioned nature of environmental conflicts can be attributed to

the fact that they are bound up with our sense of personal and social identity Environmental identity how we orient ourselves to the natural world leads us to personalize abstract global issues and take action or not according to our sense of who we are We may know about the greenhouse effect but can we give up our SUV for a more fuel efficient car Understanding this psychological connection can lead to more effective pro environmental policymaking Identity and the Natural Environment examines the ways in which our sense of who we are affects our relationship with nature and vice versa This book brings together cutting edge work on the topic of identity and the environment sampling the variety and energy of this emerging field but also placing it within a descriptive framework These theory based empirical studies locate environmental identity on a continuum of social influence and the book is divided into three sections reflecting minimal moderate or strong social influence Throughout the contributors focus on the interplay between social and environmental forces as one local activist says We don't know if we're organizing communities to plant trees or planting trees to organize communities
