with missteps in management In efforts to avoid similar failures in the future government agencies and policy practitioners have looked to recast emergency management and community resilience has emerged as a way for to better prevent manage and recover from these disasters How is disaster resilience perceived by local government officials and translated into their disaster response and recovery efforts Ashley D Ross systematically explores and measures disaster resilience across the Gulf Coast to gain a better understanding of how resilience in concept is translated into disaster management practices particularly on the local government level In doing so she presents disaster resilience theory to the Gulf Coast using existing data to create county level baseline indicators of Gulf Coast disaster resilience and an original survey of county emergency managers and elected municipal officials in 60 counties and 120 municipalities across the Gulf States The findings of the original survey measure the disaster resilience perceptions held by local government officials which are examined to identify commonalities and differences across the set of cases Additional analyses compare these perceptions to objective baseline indicators of disaster resilience to assess how perceptions align with resilience realities Local Disaster Resilience not only fills a critical gap in the literature by applying existing theories and models to a region that has experienced the worst disasters the United States has faced in the past decade but it can also be used as a tool to advance our knowledge of disasters in an interdisciplinary manner

Disaster Resiliency Naim Kapucu, Christopher V. Hawkins, Fernando I. Rivera, 2013-05-02 Natural disasters in recent years have brought the study of disaster resiliency to the forefront The importance of community preparedness and sustainability has been underscored by such calamities as Hurricane Katrina in 2005 and the Japanese tsunami in 2011 Natural disasters will inevitably continue to occur but by understanding the concept of resiliency as well as the factors that lead to it communities can minimize their vulnerabilities and increase their resilience In this volume editors Naim Kapucu Christopher V Hawkins and Fernando I Rivera gather an impressive array of scholars to provide a much needed re think to the topic disaster resiliency Previous research on the subject has mainly focused on case studies but this book offers a more systematic and empirical assessment of resiliency while at the same time delving into new areas of exploration including vulnerabilities of mobile home parks the importance of asset mapping and the differences between rural and urban locations Employing a variety of statistical techniques and applying these to disasters in the United States and worldwide this book examines resiliency through comparative methods which examine public management and policy community planning and development and on the individual level the ways in which culture socio economic status and social networks contribute to resiliency The analyses drawn will lead to the development of strategies for community preparation response and recovery to natural disasters

Combining the concept of resiliency the factors that most account for the resiliency of communities and the various policies and government operations that can be developed to increase the sustainability of communities in face of disasters the editors and contributors have assembled an essential resource to scholars in emergency planning management and policy as well as upper level students studying disaster management and policy Green CITYnomics Kenny Tang, 2017-09-08 Today more than half of the world's population are living in cities that are now contributing 80% of global greenhouse gas emissions They cover less than 3% of the earth's surface And urbanization continues apace With such a massive carbon footprint it is vital that cities are part of the solution Despite this scarcely any consideration has been given to the potential impact of climate change on urban dwellers especially in the developing countries and burgeoning megacities of Africa Asia and Latin America where a wide variety of environmental and development challenges are likely to further exacerbate their vulnerability to climatic effects Green CITYnomics presents a rich set of contributions by a highly diverse group of 45 of the world's leading urban experts on climate change In particular it illustrates the desire some cities are already demonstrating in engaging in this war Standing still is not an option Budgets have to be fought for minds have to be won over old untenable and unsustainable ideas and solutions must be challenged green and sustainable solutions must be given the chance to develop and to prove themselves Each of the cities and urban centres discussed from Hong Kong to Dresden from Mexico City to Qatar are in their own ways heroes and examples to us all This book provides a compelling manifesto for the world's cities in their Urban War against Climate Change It is essential reading for climate scientists national and local policy makers and scholars worldwide
