Humber, 2003-03-10 Prominent bioethicists whose work is rooted in philosophy religion medicine nursing literature history and policy analysis join together to discuss their methods and professional insights as well as to better define the field and its future development Writing from the perspective of their own specialties the authors review just how their personal disciplines have contributed to bioethics debate the current and future bioethical issues they face and identify the most significant strengths and weaknesses in the current practice of bioethics Seeking a sound foundation for the discipline they also consider what basic knowledge and skills are necessary to be competent in bioethics what methods and theoretical approaches are most promising for its future development and what issues or perspectives have been neglected

The Future of Bioethics

Howard Brody, 2009 Drawing on his previous work Brody argues that most of the issues concerned involve power disparities Bioethics response ought to combine new concepts that take power relationships seriously with new practical activities that give those now lacking power a greater voice A chapter on community dialogue outlines a role for the general public in bioethics deliberations Lessons about power initially learned from feminist bioethics need to be expanded into new areas cross cultural racial and ethnic and global and environmental issues as well as the concerns of persons with disabilities Bioethics has neglected important ethical controversies that are most often discussed in primary care such as patient centered care evidence based medicine and pay for performance

Franklin G. Miller, John C. Fletcher, James M. Humber, 2014-01-15 **Altering Nature** B. A. Lustig, B.A. Brody, Gerald P. McKenny, 2008-11-01 B Andrew Lustig Baruch A Brody and Gerald P McKenny In this second volume of the Altering Nature project we situate specific religious and policy discussions of four broad areas of biotechnology within the context of our interdisciplinary research on concepts of nature and the natural in the first volume Altering Nature Concepts of Nature and the Natural in Biotechnology Debates In the first volume we invited five groups of scholars to explore the diverse conceptions of nature and the natural that shape moral judgments about human alterations of nature as especially exemplified by recent developments in biotechnology A careful reading of such developments reveals that assessments of them whether positive or negative are often informed by different conceptual interpretations of nature and the natural with differing implications for judgments about the appropriateness of particular alterations of nature These varying interpretations of nature and the natural often result from the distinctive perspectives that characterize various scholarly disciplines Therefore in an effort to explore the variety of meanings that attend discussions of the concepts of nature and the natural the contributors to the first volume of Altering Nature addressed those concepts from five different disciplinary vantages A first group of scholars analyzed a range of religious and spiritual perspectives on concepts of nature and the natural Their research highlighted the thematic historical and methodological touchstones in those traditions that shape their perspectives on nature

Human Nature Jürgen Habermas, 2014-10-15 Recent developments in biotechnology and genetic research are raising complex ethical questions concerning the legitimate scope and limits of genetic intervention As we begin to contemplate the possibility of intervening in the human genome to prevent diseases we cannot help but feel that the human species might soon be able to take its biological evolution in its own hands Playing God is the metaphor commonly used for this self transformation of the species which it seems might soon be within our grasp In this important new book Jürgen Habermas the most influential philosopher and social thinker in Germany today takes up the question of genetic engineering and its ethical implications and subjects it to careful philosophical scrutiny His analysis is guided by the view that genetic manipulation is bound up with the identity and self understanding of the species We cannot rule out the possibility that knowledge of one's own hereditary factors may prove to be restrictive for the choice of an individual's way of life and may undermine the symmetrical relations between free and equal human beings In the concluding chapter which was delivered as a lecture on receiving the Peace Prize of the German Book Trade for 2001 Habermas broadens the discussion to examine the tension between science and religion in the modern world a tension which exploded with such tragic violence on September 11th

Schweda, Michael Coors, Claudia Bozzaro, 2020-01-11 This book focuses on ageing as a topic of philosophical theological and historical anthropology It provides a systematic inventory of fundamental theoretical questions and assumptions involved in the discussion of ageing and old age What does it mean for human beings to grow old and become more vulnerable and dependent How can we understand the manifestations of ageing and old age in the human body How should we interpret the processes of change in the temporal course of a human life What impact does old age have on the social dimensions of human existence In order to tackle these questions the volume brings together internationally distinguished scholars from the fields of philosophy theology cultural studies social gerontology and ageing studies The collection of their original articles makes a

twofold contribution to contemporary academic discourse On one hand it helps to clarify and deepen our understanding of ageing and old age by examining it from the fundamental point of view of philosophical theological and historical anthropology At the same time it also enhances and expands the discourses of philosophical theological and historical anthropology by systematically taking into account that human beings are essentially ageing creatures
