

Eukaryotic RNA Polymerases and General Transcription Factors

RNA polymerase II synthesizes mRNA and has been the focus of most transcription studies.

Unlike prokaryotic RNA polymerase, it requires initiation factors that (in contrast to bacterial σ factors) are not associated with the polymerase.

RNA Polymerase and Associated Factors, Part A Sankar Adhya, 1996-09-16 The critically acclaimed laboratory standard for more than forty years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry. Since 1955 each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. More than 270 volumes have been published, all of them still in print, and much of the material is relevant even today. Truly an essential publication for researchers in all fields of life sciences. **Key Features:** Promoter elements and RNA polymerase components; RNA polymerase and its subunits in prokaryotes; Biochemical assays of transcription initiation; RNA polymerase and associated factors from eukaryotes; Genetic analysis of transcription and its regulation. **RNA Polymerases as**

Molecular Motors Robert Landick, Terence Strick, Jue Wang, 2021-11-23 To thrive, every living cell must continuously gauge and respond to changes in its environment. These changes are ultimately implemented by modulating gene expression, a process that relies on transcription by Nature's most multivalent molecular machine, the RNA polymerase. This book covers progress made over the past decade, understanding how this machine functions to compute the cellular state from the atomistic structural level responsible for chemistry to the integrative level at which RNA polymerase interacts with the other key molecular machineries of the cell. *The Nucleolus* Mark O. J. Olson, 2004-08-03 As the first comprehensive overview of the nucleolus since 1985, *The Nucleolus* covers our current understanding of the cell nucleolus, including its role in ribosome assembly and its additional newly discovered activities. The eighteen chapters have been written by experts who are actively engaged in research on the nucleolus and have an in-depth review of the following topics: nucleolar ultrastructure and dynamics; behavior during mitosis; ribosomal DNA; gene and chromatin structure; pre-ribosomal RNA transcription; processing and modification; ribosome assembly; small nucleolar RNAs; proteomics; and non-traditional functions of the nucleolus. Separate chapters are also provided for yeast and higher eukaryotes on many topics. *The Nucleolus* will appeal not only to scientists directly engaged in nucleolar research but also to those working in related areas such as gene expression, protein biosynthesis, ribosome structure, transcription, chromatin structure, molecular genetics, and the structure and functions of the cell nucleus in general.

The Lesser Known World of RNA Polymerases Francisco Navarro, Athar Ansari, Olga Calvo, 2023-10-30 Transcription by RNA polymerases is a well known process in many organisms mainly at the level of transcription initiation elongation and termination Transcriptional process has been well studied in the case of the eukaryotic RNA polymerase II that synthesizes all mRNAs and also for the bacterial RNA polymerase However many aspects of RNA polymerases including their biogenesis function and even their impact in different cellular processes or in health are still unknown Moreover it is interesting to delve deeper into knowledge of less investigated RNA polymerases such as those from plants or from cellular organelles to unravel also how these enzymes mediate transcription process and how they impact cellular RNA content and gene expression
