Morgan, 2015-08-24 Travelers and traders taking the Santa Fe Trail s routes from Missouri to New Mexico wrote vivid eyewitness accounts of the diverse and abundant wildlife encountered as they crossed arid plains high desert and rugged mountains Most astonishing to these observers were the incredible numbers of animals many they had not seen before buffalo antelope pronghorn prairie dogs roadrunners mustangs grizzlies and others They also wrote about the domesticated animals they brought with them including oxen mules horses and dogs Their letters diaries and memoirs open a window onto an animal world on the plains seen by few people other than the Plains Indians who had lived there for thousands of years Phyllis S Morgan has gleaned accounts from numerous primary sources and assembled them into a delightfully informative narrative She has also explored the lives of the various species and in this book tells about their behaviors and characteristics the social relations within and between species their relationships with humans and their contributions to the environment and humankind With skillful prose and a keen eye for a priceless tale Morgan reanimates the story of life on the Santa Fe Trail s well worn routes and its sometimes violent intersection with human life She provides a stirring view of the land and of the animals visible as far as the eye could reach as more than one memoirist described She also champions the many contributions animals made to the Trail s success and to the opening of the American West *A Field Guide to Birds of the Desert Southwest* Barbara L. Davis, 1997-03-01

This field guide takes you to the desert and grassland areas of Arizona California and New Mexico where the total number of bird species reaches a staggering 440 Included are 21 desert birding hot spots in depth descriptions and behavioral information 8 bird charts and much more

Reflections of the Brazos Valley D. Gentry Steele, M. Jimmie Killingsworth, 2007-10-19 Many years ago John Graves said goodbye to a wild river that tumbled out of the Hill Country and was forever changed by dams and people In this book we say hello to that same river farther down its course in the valley that carries its name When naming the

signature landscapes of Texas if you have never said Brazos Valley in the same breath as Hill Country or Big Bend this book could change your mind In the fine penetrating photography of D Gentry Steele and the revealing affectionate reflections of M Jimmie Killingsworth the Brazos Valley has found its champions in two adopted sons who have learned to love its quiet uncelebrated beauty In words and pictures Killingsworth and Steele remind us that this valley was the birthplace of a republic was once the agricultural heart of Texas and was the ancestral home of a great alluvial river Here the Brazos is and isn't John Graves's river the one with clear running waters flowing beneath limestone cliffs A little south of Waco the river gets bigger slower muddier In its middle reaches it creates a wide swath of bottomlands and prairies where if you take the time to look you will discover the natural virtues of this place peaceful glens watered forests flowers birds and backyard wildlife This book will inspire all who live and work here and those who just visit to see the Brazos Valley anew and form a fuller appreciation of what it offers

Seven Names for the Bellbird Mark Bonta, 2003-06-17 Offering intimate and unforgettable descriptions of the birds and people that inhabit Honduran landscapes *Seven Names for the Bellbird* showcases the deep rooted local traditions of bird appreciation and holds them up as a model for sound management of the environment Through his appreciative recounting of local lore author Mark Bonta makes the interaction between culture and avifauna in Latin America a key to better understanding the practice of biodiversity protection He makes a significant contribution to the scarce anthropological and geographical literature on human environment relationships in Central America and also provides wonderful stories of native birds and their human observers After a decade in the field in Honduras Mark Bonta came to realize that contrary to outsiders general beliefs the society he observed was predisposed to like birds to observe birds to weave them into folklore and to protect them on private property Bonta argues that if North Americans and Europeans paid real attention to local knowledge and practice instead of condemning them out of hand and imposing new beliefs and techniques they would learn that rural cultures offer alternative ways of accommodating habitats and wildlife Bonta uses the concept of conservation geography the study of human beings and their landscapes with natural resource conservation in the forefront to advance his argument He describes many cases where local individuals and their traditional knowledge of birds contribute to a de facto variety of bird conservation that precedes or parallels official bird protection efforts This book is not offered as proof that all birds have happy futures in the Neotropics Bonta recognizes the ravages of both human pressures and natural disasters on the birds and forests But he shows that in many instances birds are safe and even thrive in the presence of local people who celebrate them just as often as they persecute them

Limbic Mechanisms K. Livingston, 2013-12-11 This volume records the proceedings of a Limbic System Symposium held at the University of Toronto November 5-6th 1976 as a satellite event to the Sixth Annual Meeting of the Society of Neuroscience The Symposium was designed in part as a tribute to James Papez on the 40th anniversary of the publication of his epochal paper *A Proposed Mechanism of Emotion* Papers by MacLean Yakovlev and Angevine provide personal recollections of Papez

and an assessment of the significant contribution he made to breaking down the still formidable barriers that separate our concepts of brain mind emotion and behavior Against this background subsequent speakers presented new information that further illuminates the anatomical physiological and biochemical mechanisms underlying limbic system function Viewed in juxtaposition this new information from disparate fields of neuroscience provides an increasingly coherent picture of the neuronal organization subserving a dynamic limbic system that we can now begin to visualize in operational and transactional terms The final section of the symposium focusses on the recently identified kindling phenomenon which is viewed as a general model of neural plasticity and more particularly as a model of experimentally induced limbic system dysfunction Using this model it is possible to display analyse and experimentally manipulate long lasting changes in limbic system activity which develop over extended periods of time and are expressed in a variety of behavioral end points involving learning and memory seizure activity and changes in emotionality and behavior
