

Rooftop Astronomer

The background of the book cover is a painting of a night sky with a vibrant purple and blue aurora borealis. A bright, glowing celestial body, possibly a comet or a bright planet, streaks across the sky. In the foreground, a silhouette of a person is shown from the waist up, sitting on a rooftop and looking up at the sky. The person's hair is tied up, and they are wearing a dark garment. The rooftop has a wooden railing, and in the background, the silhouettes of city buildings are visible under the night sky.

Rooftop Astronomer A Story About Maria Mitchell:

Rooftop Astronomer Stephanie Sammartino McPherson, 2011-08-01 It was a clear autumn night in 1847 Maria Mitchell stood on the roof of her parents house on the island of Nantucket focusing her telescope on a faraway star Suddenly she realized that the faint blurry light wasn't a star at all it was a comet Maria Mitchell's discovery changed her life She became famous as the first acknowledged woman astronomer in the United States During her many travels Maria came to realize that most women did not have the same opportunities as men She thought that women should be encouraged to be anything they wanted to be This was a lesson she taught her students as an astronomy professor at Vassar College and a message she stressed as the president of the Association for the Advancement of Women From the rooftops of Nantucket to the great observatories of Europe Stephanie Sammartino McPherson skillfully chronicles the life of this outstanding woman

Bergland, 2008 New England blossomed in the nineteenth century producing a crop of distinctively American writers along with distinguished philosophers and jurists abolitionists and scholars A few of the female stars of this era Emily Dickinson Margaret Fuller and Susan B Anthony for instance are still appreciated but there are a number of intellectual women whose crucial roles in the philosophical social and scientific debates that roiled the era have not been fully examined Among them is the astronomer Maria Mitchell She was raised in isolated but cosmopolitan Nantucket a place brimming with enthusiasm for intellectual culture and hosting the luminaries of the day from Ralph Waldo Emerson to Sojourner Truth Like many island girls she was encouraged to study the stars Given the relative dearth of women scientists today most of us assume that

science has always been a masculine domain But as Renee Bergland reminds us science and humanities were not seen as separate spheres in the nineteenth century indeed before the Civil War women flourished in science and mathematics disciplines that were considered less politically threatening and less profitable than the humanities Mitchell apprenticed with her father an amateur astronomer taught herself the higher math of the day and for years regularly swept the clear Nantucket night sky with the telescope in her rooftop observatory In 1847 thanks to these diligent sweeps Mitchell discovered a comet and was catapulted to international fame Within a few years she was one of America's first professional astronomers as computer of Venus a sort of human calculator for the U S Navy's Nautical Almanac she calculated the planet's changing position After an intellectual tour of Europe that included a winter in Rome with Sophia and Nathaniel Hawthorne Mitchell was invited to join the founding faculty at Vassar College where she spent her later years mentoring the next generation of women astronomers Tragically opportunities for her students dried up over the next few decades as the increasingly male scientific establishment began to close ranks Mitchell protested this cultural shift in vain The woman who has peculiar gifts has a definite line marked out for her she wrote and the call from God to do his work in the field of scientific investigation may be as imperative as that which calls the missionary into the moral field or the mother into the family The question whether women have the capacity for original investigation in science is simply idle until equal opportunity is given them In this compulsively readable biography Renee Bergland chronicles the ideological academic and economic changes that led to the original sexing of science now so familiar that most of us have never known it any other way The best thing in its line since Dava Sobel's *Longitude* Maria Mitchell and the Sexing of Science tells a great if too little known story of an intellectual woman in 19th century New England And it is beautifully told I simply could not put it down Anyone who cares about women's education in America should read this compelling and indispensable book Robert D Richardson author of *Henry Thoreau A Life of the Mind* Emerson *The Mind on Fire* and William James *In the Maelstrom of American Modernism* Renee Bergland recounts the story of Maria Mitchell's life and work in glorious and careful detail One feels and hears the sounds of Mitchell's native Nantucket her adopted Vassar and comes to understand how one of the gentler sex advanced astronomy in her day Londa Schiebinger author of *Has Feminism Changed Science* *What Miss Mitchell Saw* Hayley Barrett, 2019-09-03 Discover the amazing true story of Maria Mitchell America's first professional female astronomer Every evening from the time she was a child Maria Mitchell stood on her rooftop with her telescope and swept the sky And then one night she saw something unusual a comet no one had ever seen before Miss Mitchell's extraordinary discovery made her famous the world over and paved the way for her to become America's first professional female astronomer Gorgeously illustrated by Diana Sudyka this moving picture book about a girl from humble beginnings who became a star in the field of astronomy is sure to inspire budding scientists everywhere **Great Books for Girls** Kathleen Odean, 2002 Evaluates fiction and nonfiction books featuring girls and women in positive roles ranking each entry
