

ECOLOGY: The Study of the Place We Live

Ecology examines the relationships between the living and non-living at scales ranging from the individual organism to the biosphere.

Biodiversity

A diverse range of life indicates ecological health and often drives ecological studies.

Species Interactions

Types of interactions include predation, mutualism, parasitism, commensalism, and competition.

Energy Flow

Energy from the sun is transformed and moves through the ecosystem in a process illustrated by the food web.

Succession

Over time, an ecosystem experiences changes in biodiversity and nutrient availability.

Human Impact

Through construction, agriculture, and pollution, humans make a significant impact on the ecosystem. Modern ecologists focus on measuring this impact.

Science Of Ecology:

The Science of Ecology Paul R. Ehrlich, Joan Roughgarden, 1987 **The Science of Ecology** Richard Brewer, 1994-01-01
This book presents ecology in an historical context that both majors and non majors will appreciate and comprehend The author offers clear explanations of principles in a logical and balanced sequence and is exceptional in making clear difficult topics such as population growth **The Philosophy of Ecology** David R. Keller, Frank B. Golley, 2000 This is the first introductory anthology on the philosophy of ecology edited by an ecologist and a philosopher It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded Collectively these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization Issues covered include the challenges of defining scientific ecology tracing its genealogy and distinguishing the science from various forms of ecological like thinking the ontology of ecological entities and processes selected concepts of community stability diversity and niche the methodology of ecology rationalism and empiricism reductionism and holism the significance of evolutionary law for ecological science **The Theory of Ecology** Samuel M. Scheiner, Michael R. Willig, 2011-07-15 Despite claims to the contrary the science of ecology has a long history of building theories Many ecological theories are mathematical computational or statistical though and rarely have attempts been made to organize or extrapolate these models into broader theories The Theory of Ecology brings together some of the most respected and creative theoretical ecologists of this era to advance a comprehensive conceptual articulation of ecological theories The contributors cover a wide range of topics from ecological niche theory to population dynamic theory to island biogeography theory Collectively the chapters ably demonstrate how theory in ecology accounts for observations about the natural world and how models provide predictive understandings It organizes these models into constitutive domains that highlight the strengths and weaknesses of ecological understanding This book is a milestone in ecological theory and is certain to motivate future empirical and theoretical work in one of the most exciting and active domains of the life sciences **The Subversive Science** Paul Shepard, 1969
Population explosion pollution suburban sprawl death of the city the vanishing wilderness we keep hearing of these threats but usually manage to ignore them In this book we find instead a number of clear calm discussions of environmental problems providing information and ideas without excessive emotional appeal The 37 papers chosen from a wide variety of journals such as Human Biology Daedalus Landscape American Scientist are obviously intended for the nonspecialist intelligent reader They are divided into five groups of which the first deals with population problems both human and animal The Environmental Encounter is the title of a group of papers discussing man's reaction to his environment what he sees and the way he feels about it Here are included comments on American front yards the shapes of roofs in different European countries the importance of sacred places and an essay by Alan Watts reprinted from The Psychedelic Review The third and

fourth sections are called Man and Other Organisms and Man in Ecosystems Here we learn about the domestication of cattle sidelights on evolution Ren Dubos comments on the germ theory the possible unexpected effects of pesticides and radiation A hopeful note appears in a discussion of the use of solar energy The final part called Ethos Ecos and Ethics includes more philosophical commentaries Especially interesting is a discussion by Lynn White of the historical roots of our ecologic crisis from a review by Marjorie C Meehan in [jama.jamanetwork.com article.aspx?articleid=345416](http://jama.jamanetwork.com/article.aspx?articleid=345416) *Unity Of Nature, The: Wholeness And Disintegration In Ecology And Science* Alan Marshall,2002-10-04 The idea behind The Unity of Nature is a strong theoretical theme in a number of scientific and environmental fields from ecosystems ecology through quantum physics to environmental philosophy and ecopolitics giving rise to an inspiring optimistic socially responsive and environment friendly worldview The fields of science and environmentalism have inherited this theme of natural unity through an intellectual lineage that encompasses many non scientific and non environmental fields such as sociology theology and political philosophy Many of these fields have used natural unity in a way which is in stark opposition to the metaphysical and political desires of those who promulgate the unity of nature for progressive social change This book discusses how this has transpired and examines the social and intellectual processes that have been at work These include the social construction of the Organicism versus Mechanicism debate in ecology the intellectual links between neo classical economic principles and the New Sciences the techno scientific background of Gaia theory and the social conservatism of ecological functionalism
