Micro House

According to studies houses answer to a certain number of needs for a human.

- 1.Shelter
- 2.Food and Water
- 3.Sanitation
- 4.Sleep
- 5.Others(social communications)

When it comes to terms of designing micro houses, it is usual that because of lacking of space the areas that are supposed to go under the category of OTHERS such as spaces for micro scale social interaction will be diminished. Referencing to so many unsuccessful capsule housings which are inhabitable lacking the high qualities of living, we are designing plugin housing with consideration of revival of In-Between spaces named as Serendipity in this project.

People tend to define houses for dwelling based on different essential behaviours.

1. Need for Privacy
2. Need for semi-private, close relationships
3. Need for Micro scale social communications
4. Need for Mega scale social communications

The first two needs are responded by whatever happens inside the walls of a house, but the need to make familiar social interactions seem to vanish in Modern era.

Before overgrowing of mega cities and the birth of residential towers, houses were connected to the street with a coherent hierarchy of smaller streets and Alleys which was giving the dwellers an opportunity to interact with people of the neighbourhood. Meanwhile, the modern pattern of living connects the apartments vertically by different number of staircases and elevators which are in lack of rich qualities needed for **SERENDIPITY**

Lewis, Tong Heng Lee, Zhao Yang Dong, 2017-07-28 In an era of intense competition where plant operating efficiencies must be maximized downtime due to machinery failure has become more costly To cut operating costs and increase revenues industries have an urgent need to predict fault progression and remaining lifespan of industrial machines processes and systems An engineer who mounts an acoustic sensor onto a spindle motor wants to know when the ball bearings will wear out without having to halt the ongoing milling processes A scientist working on sensor networks wants to know which sensors are redundant and can be pruned off to save operational and computational overheads These scenarios illustrate a need for new and unified perspectives in

system analysis and design for engineering applications Intelligent Diagnosis and Prognosis of Industrial Networked Systems proposes linear mathematical tool sets that can be applied to realistic engineering systems The book offers an overview of the fundamentals of vectors matrices and linear systems theory required for intelligent diagnosis and prognosis of industrial networked systems Building on this theory it then develops automated mathematical machineries and formal decision software tools for real world applications The book includes portable tool sets for many industrial applications including Forecasting machine tool wear in industrial cutting machines Reduction of sensors and features for industrial fault detection and isolation FDI Identification of critical resonant modes in mechatronic systems for system design of R D Probabilistic small signal stability in large scale interconnected power systems Discrete event command and control for military applications The book also proposes future directions for intelligent diagnosis and prognosis in energy efficient manufacturing life cycle assessment and systems of systems architecture Written in a concise and accessible style it presents tools that are mathematically rigorous but not involved Bridging academia research and industry this reference supplies the know how for engineers and managers making decisions about equipment maintenance as well as researchers and students in the field Report United States. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is a brilliant and suspenseful novel that will keep you guessing until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
