Jacques Tits,2013-11-15 Jacques Tits was awarded the Wolf Prize in 1993 and the Abel Prize jointly with John Thompson in 2008 The impact of his contributions in algebra group theory and geometry made over a span of more than five decades is incalculable Many fundamental developments in several fields of mathematics have their origin in ideas of Tits A number of Tits papers mark the starting point of completely new directions of research Outstanding examples are papers on quadratic forms on Kac Moody groups and on what subsequently became known as the Tits alternative These volumes contain an almost complete collection of Tits mathematical writings They include in particular a number of published and unpublished manuscripts which have not been easily accessible until now This collection of Tits contributions in one place makes the evolution of his mathematical thinking visible The development of his theory of buildings and BN pairs and its bearing on the theory of algebraic groups for example reveal a fascinating story Along with Tits mathematical writings these volumes contain biographical data survey articles on aspects of Tits work and comments by the editors on the content of some of his papers With the publication of these volumes a major piece of 20th century mathematics is being made available to a wider audience **Group Colorings and Bernoulli Subflows** Su Gao,Stephen C Jackson,Brandon Seward,2016-04-26 In this

paper the authors study the dynamics of Bernoulli flows and their subflows over general countable groups One of the main themes of this paper is to establish the correspondence between the topological and the symbolic perspectives From the topological perspective the authors are particularly interested in free subflows subflows in which every point has trivial stabilizer minimal subflows disjointness of subflows and the problem of classifying subflows up to topological conjugacy Their main tool to study free subflows will be the notion of hyper aperiodic points a point is hyper aperiodic if the closure of its orbit is a free subflow *Maximal $\{PSL\}_2$ Subgroups of Exceptional Groups of Lie Type* David A.

Raymond,2016-05-20 Focusing on the later work of the American photographer Francesca Woodman 1958 1981 Claire Raymond takes up the question of the disintegrative condition of the art she produced in the last year of her life Departing from the techniques of her earlier compositions Woodman worked in the diazotype process for many of these late pieces most importantly the monumental Blueprint for a Temple Raymond shows that through her use of diazotype a medium that breaks down when exposed to light Woodman created art that is both supremely evocative aesthetically and inherently unstable physically Woodman Raymond contends was imaginatively responding to the end of the durable image a historical reality acknowledged in the way her work plays the ephemeral and evanescent against the monumental and enduring Raymond

focuses on the theoretical and the curatorial issues surrounding Woodman's diazotypes a thematic and practical distress that haunts much of her later art especially the artist's book and photo series *Some Disordered Interior Geometries* and *Portrait of a Reputation* Rather than conceiving of Woodman herself as fragile an artist chronicling and seeming to yearn for her own disappearance Raymond juxtaposes Woodman's career spanning documentation of her own image against other post war witnesses of trauma an artist standing in the museum ruins where she emerges most distinctly as a figure of postmodernity
