of public international law in today's complex and highly dynamic global security environment. Which concepts of security are anchored in international law? How is the global security environment shaping international law and how is international law in turn influencing other normative frameworks? The Oxford Handbook of the International Law of Global Security provides a ground-breaking overview of the relationship between international law and global security. It constitutes a comprehensive and systematic mapping of the various sub-fields of international law dealing with global security challenges and offers authoritative guidance on key trends and debates around the relationship between public international law and global security governance. This Handbook highlights the central role of public international law in an effective global security architecture and in doing so addresses some of the most pressing legal and policy challenges of our time. The Handbook features original contributions by leading scholars and practitioners from a wide range of professional and disciplinary backgrounds reflecting the fluidity of the concept of global security and the diversity of scholarship in this area. **New**

**Technologies and the Law of Armed Conflict** Hitoshi Nasu, Robert McLaughlin, 2013-12-23 Modern technological development has been both rapid and fundamentally transformative of the means and methods of warfare and of the broader environment in which warfare is conducted. In many cases technological development has been stimulated by and dedicated to addressing military requirements. On other occasions technological developments outside the military sphere affect or inform the conduct of warfare and military expectations. The introduction of new technologies such as information technology, space technologies, nanotechnology and robotic technologies into our civil life and into warfare is expected to influence the application and interpretation of the existing rules of the law of armed conflict. In this book scholars and practitioners working in the fields critically examine the potential legal challenges arising from the use of new technologies and future directions of legal development in light of the specific characteristics and challenges each technology presents with regard to foreseeable humanitarian impacts upon the battlespace. **A National Security Strategy of Engagement and**
