The English Coast Peter Murphy,2011-10-20 This book examines the interaction between people and the coast of England It spans from 700 000 years ago and the earliest evidence of humans in this remote corner of north west Europe to the end of the 20th century The coastline has witnessed interesting and significant events throughout history and looks set to do so in the future Often it is the first place where changes can be seen for example the effects of climate change It is also where evidence for human adaptation to environmental changes can most readily be seen The coast has of course also been a cultural contact zone for millennia in terms of trade industry immigration and conflict We are certainly at a time of great environmental and economic transition so it is apt to now take a long view and place current events in context Some changes

happening today may seem unprecedented but in fact are not while others are entirely new One thing we can be sure of is that the coast and sea will become increasingly important to us both as an economic benefit and as a threat *Guide to the Manuscripts in the National Maritime Museum: Public records, business records and artificial collections* National Maritime Museum (Great Britain),1977 Volume one describes 300 collections of personal papers held by the Museum
