The Nation's Physician Workforce Committee on the U.S. Physician Supply, Institute of Medicine, 1996-02-02
Enormous changes are occurring in the organization and financing of the U S health care system rapid changes that are being driven by market forces rather than by government initiatives Although it is difficult to predict what they system will look like once it begins to stabilize the changes will affect all components of the health care workforce and the numbers and types of health care professionals that will be needed in the future as well as the roles they will fill will surely be much different than they were in the past Despite numerous studies in the past 15 years showing that we might have more doctors than we need the number of physicians in residency training continues to grow At the same time there is evidence that the demand for physician services will decrease as a result of growth of managed care All of this is evidence that the demand for physician services will decrease as a result of growth of managed care All of this is taking place at a time when coincident with the result of failure of comprehensive health care reform there is no coordinated and widely accepted physician workforce policy in the United States The present study examines the following three questions 1 Is there a physician policy in the United States 2 If there a surplus what is its likely impact on the cost quality and access to health care and on the efficient use of human resources 3 What realistic steps can be taken to deal with a physician surplus December *Physician workforce physician supply increased in metropolitan and nonmetropolitan areas but geographic disparities persisted.* ,
