The Heat Will Kill You First Jeff Goodell,2023-07-11 New York Times best selling journalist Jeff Goodell presents a masterful bracing David Wallace Wells examination of the impact that temperature rise will have on our lives and on our planet offering a vital new perspective on where we are headed how we can prepare and what is at stake if we fail to act

When heat comes it's invisible. It doesn't bend tree branches or blow hair across your face to let you know it's arrived. The sun feels like the barrel of a gun pointed at you. The world is waking up to a new reality: wildfires are now seasonal in California; the Northeast is getting less and less snow each winter; and the ice sheets in the Arctic and Antarctica are melting fast. Heat is the first order threat that drives all other impacts of the climate crisis. And as the temperature rises, it is revealing fault lines in our governments, our politics, our economy, and our values. The basic science is not complicated: Stop burning fossil fuels tomorrow, and the global temperature will stop rising tomorrow. Stop burning fossil fuels in 50 years, and the temperature will keep rising for 50 years, making parts of our planet virtually uninhabitable. It's up to us. The hotter it gets, the deeper and wider our fault lines will open. *The Heat Will Kill You First* is about the extreme ways in which our planet is already changing. It is about why spring is coming a few weeks earlier and fall is coming a few weeks later, and the impact that will have on everything from our food supply to disease outbreaks. It is about what will happen to our lives and our communities when typical summer days in Chicago or Boston go from 90 F to 110 F. A heatwave, Goodell explains, is a predatory event: one that culls out the most vulnerable people. But that is changing. As heatwaves become more intense and more common, they will become more democratic. As an award-winning journalist who has been at the forefront of environmental journalism for decades, Goodell's new book may be his most provocative yet, explaining how extreme heat will dramatically change the world as we know it. Masterfully reported, mixing the latest scientific insight with on-the-ground storytelling, Jeff Goodell tackles the big questions and uncovers how extreme heat is a force beyond anything we have reckoned with before.

Wading Through Many Voices Harold Recinos, 2011-04-16 *Wading Through Many Voices* brings together the voices of Latino, African American, Asian American, Native American, and Euro American scholars to produce a dialogue of public theology: how faith communities divided by race, class, ethnicity, and gender can find a common ground for life together. The authors articulate a multiethnic perspective on public theology that counters the divisive identity politics of U.S. public life with systematic thinking that strengthens the commitment to critically transform social relations in light of a shared vision of public good. The contributors develop a shared public theology that addresses social divisions while offering readers a broad vision to collaborate and struggle for an improved understanding of the common good for our pluralistic society. In light of emerging social issues, the contributors suggest that a fundamental respect for difference is a required first value for living together in a common social and political space.

Voices from the Ancestors Lara Medina, Martha R. Gonzales, 2019-10-08 *Voices from the Ancestors* brings together the reflective writings and spiritual practices of Xicanx, Latinx, and Afro Latinx womxn and male allies in the United States who seek to heal from the historical traumas of colonization by returning to ancestral traditions and knowledge. Bernstein,2006-02 Addresses the evolution of consciousness describing the emergence of the Borderland consciousness and the challenge this presents to the Western medicine s concept of pathology *Water and Urbanism in Roman Britain* Jay Ingate,2019-03-28 The establishment of large scale water infrastructure is a defining aspect of the process of urbanisation In places like Britain the Roman period represents the first introduction of features that can be recognised and paralleled to our modern water networks Writers have regularly cast these innovations as markers of a uniform Roman identity spreading throughout the Empire and bringing with it a familiar modern sense of what constitutes civilised urban living However this is a view that has often neglected to explain how such developments were connected to the important symbolic and ritual traditions of waterscapes in Iron Age Britain *Water and Urbanism in Roman Britain* argues that the creation of Roman water infrastructure forged a meaningful entanglement between the process of urbanisation and significant local landscape contexts As a result it suggests that archetypal Roman urban water features were often more related to an active expression of local hybrid identities rather than alignment to an incoming continental ideal By questioning the familiarity of these aspects of the ancient urban form we can move away from the unhelpful idea that Roman precedent is a central tenet of the current unsustainable relationship between water and our modern cities This monograph will be of interest to academics and students studying aspects of Roman water management urbanisation in Roman Britain and theoretical approaches to landscape It will also appeal to those working more generally on past human interactions with the natural world *Head Cases* Michael Paul Mason,2008-04 Mason gives a series of vivid glimpses into brain science the last frontier of medicine and explores fragility of the brain and the sense of self life and order that resides there *Religion in Today's World* Melissa M.
