From conflict to collaboration in natural resource management Röttinger, L., Janáen, A., Knupp, C., Griestop, L., Natural resource management is closely linked to conflict management prevention and resolution Managing natural resources involves reconciling diverging interests that often lead to conflict which can undermine management institutions and lead to exploitation environmental destruction and deteriorating livelihoods If conflicts turn violent they can rip apart the entire fabric of society Thus managing conflicts in a peaceful manner is decisive not only for successful and sustainable resource management but for societal stability in general Despite this connection the knowledge and experience gained in the fields of

conflict transformation and peacebuilding in the last decades are often not used by natural resource managers One reason is that this knowledge has not been translated into user friendly resources that can be easily understood by practitioners without prior experience in these fields This handbook and toolkit helps fill this gap providing an orientation to the issues and a suite of practical exercises and tools to support participatory processes Potentials and Obstacles in the Arena of

and preferences the public's position often appears as unclear Coglianese 1997 Rossi 1997 Participatory processes are thus needed that combine technical expertise rational decision making and public values and preferences How can and should natural resource managers collect public preferences integrate public input into the management process and assign the appropriate roles to technical experts stakeholders i e Governance, Natural Resources and Post-Conflict Peacebuilding Carl Bruch, Carroll Muffett, Sandra Nichols, 2016-04-07 When the guns are silenced those who have survived armed conflict need food water shelter the means to earn a living and the promise of safety and a return to civil order Meeting these needs while sustaining peace requires more than simply having governmental structures in place it requires good governance Natural resources are essential to sustaining people and peace in post conflict countries but governance failures often jeopardize such efforts This book examines the theory practice and often surprising realities of post conflict governance natural resource management and peacebuilding in fifty conflict affected countries and territories It includes thirty nine chapters written by more than seventy researchers diplomats military personnel and practitioners from governmental intergovernmental and nongovernmental organizations The book highlights the mutually reinforcing relationship between natural resource management and good governance Natural resource management is crucial to rebuilding governance and the rule of law combating corruption improving transparency and accountability engaging disenfranchised populations and building confidence after conflict At the same time good governance is essential for ensuring that natural resource management can meet immediate needs for post conflict stability and development while simultaneously laying the foundation for a sustainable peace Drawing on analyses of the close relationship between governance and natural resource management the book explores lessons from past conflicts and ongoing reconstruction efforts illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives and presents an emerging theoretical and practical framework for policy makers researchers practitioners and students Governance Natural Resources and Post Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post conflict peacebuilding and natural resource management The project has generated six books of case studies and analyses with contributions from practitioners policy makers and researchers Other books in this series address high value resources land water livelihoods and assessing and restoring natural resources Managing Natural Resource Conflicts with Participatory Mapping and PGIS Applications Peter A.
