Natural Connections:

Natural Connections David Western, Michael Wright, 2013-03-19 Both realism and justice demand that efforts to conserve biological diversity address human needs as well. The most promising hope of accomplishing such a goal lies in locally based conservation efforts: an approach that seeks ways to make local communities the beneficiaries and custodians of conservation efforts. *Natural Connections* focuses on rural societies and the conservation of biodiversity in rural areas. It represents the first systematic analysis of locally based efforts and includes a comprehensive examination of cases from around the world where the community based approach is used. The book provides an overview of community based conservation in the context of the debate over sustainable development, poverty and environmental decline; case studies from the developed and developing worlds: Indonesia, Peru, Australia, Zimbabwe, Costa Rica, the United Kingdom; that present detailed examples of the locally based approach to conservation; a review of the principal issues arising from community based programs; an agenda for future action.

Natural Connections 2 Emily M. Stone, 2019-03-15 Do you also love finding adventure and intrigue in strange places? Emily Stone's second book transports you across the moat into a magical world where nature is better than fiction. By using science to tell stories, Emily wields a magic that makes the whole world feel more alive.

Emerging Approaches in Design and New Connections With Nature Özdamar, Esen Gökçe, Tandoğan, Okşan, 2021-12-03 In today's changing and transforming socio-economic, political, cultural, and technological paradigms, we encounter many methodologies, approaches, proposals, and practices in reconsidering the disappearing or emerging relations in the human-nonhuman environment-nature interaction. These approaches, proposals, and practices range from new methods of urban gardening to biophilic design and augmented immersive environments. However, these human-centric approaches, which only aim to meet their needs or emerge as technology-oriented replicas and representations of nature, lead to a departure from a holistic approach to the natural and artificial environment. Therefore, how can new and emerging approaches or methodologies draw a holistic framework for environmental health, sustainability, wellness, and co-existence between environments for all living beings? *Emerging Approaches in Design and New Connections With Nature* covers a variety of topics related to the intersection between nature, environment, and ways of living and provides a comprehensive guide to biophilic design and the idea of design and nature, including benefits, theories, and effects. Covering topics such as biophilic design and sustainability, soundscapes and landscapes, and urban environments and design, it is ideal for architects, designers, urban planners, landscape designers, policymakers, engineers, interior designers, practitioners, students, academicians, and researchers.

Parabolic Geometries I Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including

such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant's version of the Bott Borel Weil theorem which is used as an important tool For many examples the complete description of the geometry and its basic invariants is worked out in detail The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry Several applications are discussed throughout the text

Sacred Natural Sites Bas Verschuuren, Robert Wild, Jeffrey McNeely, Gonzalo Oviedo, 2012-06-25 Sacred Natural Sites are the world's oldest protected places This book focuses on a wide spread of both iconic and lesser known examples such as sacred groves of the Western Ghats India Sagarmatha Chomolungma Mt Everest Nepal Tibet and China the Golden Mountains of Altai Russia Holy Island of Lindisfarne UK and the sacred lakes of the Niger Delta Nigeria The book illustrates that sacred natural sites although often under threat exist within and outside formally recognised protected areas heritage sites Sacred natural sites may well be some of the last strongholds for building resilient networks of connected landscapes They also form important nodes for maintaining a dynamic socio cultural fabric in the face of global change The diverse authors bridge the gap between approaches to the conservation of cultural and biological diversity by taking into account cultural and spiritual values together with the socio economic interests of the custodian communities and other relevant stakeholders **Trends**

Debunking Moral Generalism Dominikus Sukristiono,2025-01-01 **Faith, Hope, and Love in the Technological Society** Franz A. Foltz,Frederick A. Foltz,2018-07-31 Franz and Frederick Foltz examine how modern technology creates an environment that significantly affects Christianity by reducing the mysteries of faith to manageable techniques The body of their work analyzes the effects of technology on the theological virtues of faith hope and love the triad that believers have used for a common narrative to understand and express their thoughts and experiences They begin by looking at how recent developments have brought us into a post truth era by removing words from their context in nature time place and community Popular theologies such as the power of positive thinking the laws of creation the plan for salvation and the prosperity gospel reflect this change by gearing all for efficiently getting what we want and ignoring tradition The authors then examine each of the virtues separately finding that faith has become a risk management tool that depends on confidence in systems rather than personal relationships hope is defined as the expectation that our present desires shall be granted rather than a vision of the future and love has become an intimacy that provides escape from the real world and community rather than a self denying care for them Finally the authors take a look at some appropriate responses
