Vertical Natural Gas Transportation Capacity, Upstream Commodity Contracts, and EU Competition Law Kim Talus, 2011-01-01 Because the EU depends on a very small number of external suppliers for its natural gas energy security issues inevitably arise In theory competition law should regulate and adjudicate such issues Yet because contracts between EU companies and producers are highly sensitive and politically charged the application of EU competition law to natural gas contracts is far from clear This important book drawing on ECJ case law Commission administrative cases and inquiries and the full range of relevant legal and economic theory provides an extremely valuable and detailed study of how EU competition law can be applied to long term natural gas capacity reservation and commodity contracts Issues and topics such as the following arise in the course of the analysis Third Gas Market Directive provisions Article 102 TFEU cases on strategic under investment pre liberation or legacy gas contracts e g with Algeria and Russia right of first refusal take or pay requirement third party access ownership unbundling effect of elimination of priority access regimes short term trading spot markets and law and economics of vertical restraints Focusing on the foreclosing effect of long term upstream commodity contracts the author recommends restrictions on the use of capacity reservation contracts and analyses the efficacy of security of supply as a competition law defence in cases relating to such contracts **Oil & Gas Production in Nontechnical Language** Martin Raymond, William L.
