Natural Gas Vehicles:

Alternative Fuel Vehicles Brian Anthony Abbanat, 2001 Natural Gas Vehicles John G. Ingersoll, 1996 This important reference addresses every critical aspect of natural gas vehicles including cost parameters environmental benefits and an examination of market penetration strategies The book provides a comprehensive assessment of natural gas as a vehicular fuel covering availability issues recent breakthroughs in vehicle on board storage and comparison with other low polluting fuel technologies The roles for federal state and local governments auto manufacturers and natural gas suppliers in making both natural gas vehicles and the fuel to operate them widely available are examined **Natural Gas-Powered Cars and Trucks** Hayley Ackerman, 2015 The increase in domestic supplies of natural gas has raised new interest in expanding its use in the transportation sector This book considers issues related to wider use of natural gas as a fuel in passenger cars and commercial vehicles This book is designed to help fleets understand the cost factors associated with fueling infrastructure for compressed natural gas CNG vehicles It provides estimated cost ranges for various sizes and types of CNG fueling stations and an overview of factors that contribute to the total cost of an installed station and describes how the National Renewable Energy Laboratory NREL used the VICE model to establish guidance for fleets making decisions about using CNG

engines designed to run on gasoline or diesel can also be modified to operate on natural gas a clean burning fuel Natural gas vehicles NGVs can be dedicated to natural gas as a fuel source or they can be bi fuel running on either natural gas or gasoline or natural gas or diesel although most natural gas engines are spark ignited Natural gas engine technologies can differ in the following ways the method used to ignite the fuel in the cylinders the air fuel ratio the compression ratio and the resulting performance and emissions capabilities Natural gas has a high octane rating which in spark ignition engines usual for CNG allows an increase in power However natural gas occupies a larger volume in the cylinder than liquid fuels reducing the number of oxygen molecules share of air in the cylinder which reduces power The net effect on natural gas power vs gasoline is relatively neutral However since it is a gaseous fuel at atmospheric pressure and occupies a considerably larger storage volume per unit of energy than refined petroleum liquids it is stored on board the vehicle in either a compressed gaseous or liquefied state The storage requirements are still much greater than for refined petroleum products This increases vehicle weight which tends to reduce fuel economy To become compressed natural gas CNG it is pressurized in a tank at up to 3 600 pounds per square inch Typically in sedans the tank is mounted in the trunk or replaces the existing fuel tank on trucks the tank is mounted on the frame and on buses it is mounted on top of the roof Although tanks can be made completely from metal they are typically composed of metal liners reinforced by a wrap of composite fiber material with pressure relief devices designed to withstand impact Tanks do increase the vehicle weight and with the lower energy density of natural gas vehicle ranges are generally reduced To become liquefied natural gas LNG natural gas is cooled to 260 F and filtered to remove impurities LNG is stored in double wall vacuum insulated pressure tanks and is primarily used on heavy duty trucks providing increased range over CNG NGVs and their respective fueling systems must meet stringent industry and government standards for compression storage and fueling They are designed to perform safely during both normal operations and crash situations Nozzles and vehicle receptacles are designed to keep fuel from escaping

Natural Gas Vehicles (NGV) ,1984 **Paving the Way to Natural Gas Vehicles** James Spencer Cannon,1993 *Compressed Natural Gas Vehicles* Kevin Edward McCarthy,2008 Discusses how compressed natural gas CNG vehicles work what has the state done to promote these vehicles and why aren t there more CNG vehicles in use in the state *Natural Gas for Cars and Trucks* Congressional Research Service,2014-11-19 The increase in domestic supplies of natural gas has raised new interest in expanding its use in the transportation sector This report considers issues related to wider use of natural gas as a fuel in passenger cars and commercial vehicles The attractiveness of natural gas as a vehicle fuel is premised in large part on its low price on an energy equivalent basis compared to gasoline and diesel fuel When prices for gasoline and diesel are relatively low or natural gas prices are relatively high natural gas based fuels lose much of their price advantage While natural gas has other benefits such as producing lower emissions than gasoline and diesel and protecting users of transportation fuels from the volatility of the international oil market it is largely the cost advantage if any that will determine the future attractiveness

of natural gas vehicles There are a number of technology pathways that could lead to greater use of natural gas in transportation Some require pressurized systems to use natural gas in a gaseous state and others convert natural gas to a liquid Two of the most widely discussed options use compressed natural gas CNG and liquefied natural gas LNG Other technological approaches use liquefied petroleum gas LPG propane and hydrogen In addition natural gas can be used to generate electricity to power electric vehicles Increasing the use of natural gas to fuel vehicles would require creation of an extensive nationwide refueling infrastructure Although a small number of CNG vehicles have been on U S roads for more than 20 years CNG use has been limited to vehicles that return to a central garage for refueling each day such as refuse trucks short haul trucks and city buses LNG on the other hand requires large insulated tanks to keep the liquefied gas at a very low temperature and is therefore seen as more suitable for long haul trucks In both cases the limited availability of refueling stations has limited the distances and routes these vehicles may travel Congress has taken a strong interest in spurring production and use of natural gas vehicles Legislation has been introduced on a wide range of proposals that would equalize the tax treatment of LNG and diesel fuels provide tax credits for natural gas vehicles and refueling equipment require the production of vehicles that could run on several different fuels such as gasoline and CNG increase federal research and development on natural gas vehicle tank and fuel line technologies and revise vehicle emission regulations to encourage manufacturers to produce more CNG passenger cars Legislation pending in the 113th Congress includes proposals that would extend expired tax credits for refueling property and fuel cell vehicles S 2260 authorize the use of energy savings performance contracts to support the use of natural gas and electric vehicles S 761 and require the U S Postal Service to study the feasibility of using natural gas and propane in long haul trucks S 1486
