Proof Methods For Modal And Intuitionistic Logics:

Proof Methods for Modal and Intuitionistic Logics M. Fitting, 1983-04-30 Necessity is the mother of invention Part I What is in this book details There are several different types of formal proof procedures that logicians have invented The ones we consider are 1 tableau systems 2 Gentzen sequent calculi 3 natural deduction systems and 4 axiom systems We present proof procedures of each of these types for the most common normal modal logics S5 S4 B T D K K4 D4 KB DB and also G the logic that has become important in applications of modal logic to the proof theory of Peano arithmetic Further we present a similar variety of proof procedures for an even larger number of regular non normal modal logics many introduced by Lemmon We also consider some quasi regular logics including S2 and S3 Virtually all of these proof procedures are studied in both propositional and first order versions generally with and without the Barcan formula Finally we present the full variety of proof methods for Intuitionistic logic and of course Classical logic too We actually give two quite different kinds of tableau systems for the logics we consider two kinds of Gentzen sequent calculi and two kinds of natural deduction systems Each of the two tableau systems has its own uses each provides us with different information about the logics involved They complement each other more than they overlap Of the two Gentzen systems one is of the conventional sort common in the literature

Proof Methods for Modal and Intuitionistic Logics M. Fitting, 2014-01-15 [The Method of Socratic Proofs](#) Dorota Leszczyńska-Jasion, 2025-06-13 This book contains a systematic and formal attempt to model solutions to problems such as Is it possible to prove a question Is it possible to prove something by the use of questions Do the existing paradigms in the logic of questions allow one to combine questions and proofs What are the results in this field In developing answers the book focuses on the applications of the method of Socratic proofs and goes beyond that It starts out with an overview of the leading paradigms issues problems and ready solutions in the logic of questions and places Inferential Erotetic Logic and the method of Socratic proofs against a wider background It then introduces these two methods in more detail and explains how they can be used for classical logic intuitionistic propositional logic and for basic modal logics Next the book deals with issues specific to the field of the logic of questions introducing the tools of Minimal Erotetic Semantics MiES The final chapters describe the translations between proof systems from a Socratic transformation derived in an erotetic calculus into a sequent system

Automated Proof Search in Non-classical Logics Lincoln A. Wallen, 1990 This book

develops and demonstrates efficient matrix proof methods for automated deduction within an important and comprehensive class of first order and intuitionistic logics Traditional techniques for the design of efficient proof systems are abstracted from their original setting which allows their application to a wider class of mathematical logic The logics discussed are used throughout computer science and artificial intelligence Contents Introduction I Automated Deduction in Classical Logic Proof search in classical sequent calculi A matrix characterization of classical validity II Automated Proof Deduction in Modal Logics The semantics and proof theory of modal logics Proof search in modal sequent calculi Matrix characterizations of modal validity Alternative proof methods for modal logics Matrix based proof search III Automated Deduction in Intuitionistic Logic A Matrix proof method Conclusions

Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2002-11-30 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been

over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then. The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas. The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic. We are confident that the second edition will prove to be just as good. The first edition was the second handbook published for the logic community. It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise. The four volume Handbook of Philosophical Logic published 1983-1989 came at a fortunate temporal junction at the evolution of logic. This was the time when logic was gaining ground in computer science and artificial intelligence circles. These areas were under increasing commercial pressure to provide devices which help and/or replace the human in his daily activity. This pressure required the use of logic in the modelling of human activity and organization on the one hand and to provide the theoretical basis for the computer program constructs on the other.

Logic Colloquium 2005 Costas Dimitracopoulos, Ludomir Newelski, Dag Normann, John R. Steel, 2007-12-03. The Annual European Meeting of the Association for Symbolic Logic generally known as the Logic Colloquium is the most prestigious annual meeting in the field. Many of the papers presented there are invited surveys of developments and the rest of the papers are chosen to complement the invited talks. This 2007 volume includes surveys, tutorials and selected research papers from the 2005 meeting. Highlights include three papers on different aspects of connections between model theory and algebra, a survey of major advances in combinatorial set theory, a tutorial on proof theory and modal logic and a description of Bernays's philosophy of mathematics.

Advanced Topics in Artificial Intelligence John K. Slaney, 1998-10-07. This book constitutes the refereed proceedings of the 10th Australian Joint Conference on Artificial Intelligence (AIJ97) held in Perth, Australia, in November/December 1997. The volume presents 48 revised full papers selected from a total of 143 submissions. Also included are three keynote talks and one invited paper. The book is divided into topical sections on constraint satisfaction and scheduling, computer vision, distributed AI, evolutionary computing, knowledge based systems, knowledge representation and reasoning, learning and machine vision, machine learning, NLP and user modeling, neural networks, robotics and machine recognition, and temporal/qualitative reasoning.

Artificial Intelligence IV P. Jorrand, V. Sgurev, 2016-01-22. Presenting recent results and ongoing research in Artificial Intelligence, this book has a strong emphasis on fundamental questions in several key areas: programming languages, automated reasoning, natural language processing, and computer vision. AI is at the source of major programming language design efforts. Different approaches are described with some of their most significant results: languages combining logic and functional styles, logic and parallel functional and parallel logic with constraints. A central problem in AI is automated reasoning and formal logic is historically at the root of research in this domain. This book presents results in automatic deduction, non-monotonic reasoning, non-standard logic, machine learning, and common sense reasoning. Proposals for

knowledge representation and knowledge engineering are described and the neural net challenger to classical symbolic AI is also defended Finally AI systems must be able to interact with their environment in a natural and autonomous way Natural language processing is an important part of this Various results are presented in discourse planning natural language parsing understanding and generation The autonomy of a machine for perception of its physical environment is also an AI problem and some research in image processing and computer vision is described

political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought
