River And Stream Ecosystems Of The World:

River and Stream Ecosystems of the World Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 2006-02-06 This is a synopsis and review of the major rivers of the world **Ecosystems of the World** David W. Goodall, 1977 *The Biology of Streams and Rivers* Paul S. Giller, Bjorn Malmqvist, 1998-11-26 The aim of this book is to provide an accessible up to date introduction to stream and river biology Beginning with the physical features that define running water habitats the book goes on to look at these organisms and their ecology **River and Stream Ecosystems** Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 1995 Hardbound This volume is a compilation of data from streams throughout the world using the template of the River Continuum Concept RCC as a model for analysis Various models have been offered to explain the structure and function of flowing water systems as holistic ecosystems including the catchment basin in which they are found The first widely used such model was the RCC and despite the several modifications and adjustments that have been made to it it continues to be a most useful model for streams in North America and in Europe Other useful concepts include Nutrient Spiraling Stream Patch Dynamics Hydraulic Stream Ecology Riparian Influence and the newly formulated Flood Pulse Concept Each of these offer useful corollaries to the RCC and it is highly likely that the integration of tenants of all of these models will contribute to more meaningful generalizations of how flowing water ecosystems function Each chapter in this book evaluates **River Ecosystem Ecology** Gene E. Likens, 2010-03-29 A derivative of the Encyclopedia of Inland Waters River Ecosystem Ecology reviews the function of rivers and streams as ecosystems as well as the varied activities and interactions that occur among their abiotic and biotic components Because the articles are drawn from an encyclopedia the articles are easily accessible to interested members of the public such as conservationists and environmental decision makers Includes an up to date summary of global aquatic ecosystems and issues Covers current environmental problems and management solutions Features full color figures and tables to support the text and aid in understanding *Global Change and River Ecosystems - Implications for Structure, Function and Ecosystem Services* R. Jan Stevenson, Sergi Sabater, 2015-03-21 Rivers around the world are threatened by changes in land use climate hydrologic cycles and biodiversity Global changes in rivers include but are not restricted to water flow interruptions temperature increases loss of hydrological connectivity altered water residence times changes in nutrient loads increasing arrival of new chemicals simplification of the physical structure of the systems occurrence of invasive species and biodiversity losses All of them affect the structure and functioning of the river ecosystem and thereby their ecosystem services Understanding the responses of river ecosystems and their services to global change is essential for protecting human well being in all corners of the planet Rivers provide critical benefits by providing food from fisheries and irrigation regulating biogeochemical balances and enriching our aesthetic and cultural experience Predicting responses of rivers to global change is challenged by the complexity of interactions among these man made drivers across a mosaic of natural hydrogeomorphic and climatic settings This book

explores the broad range of determinants defining global change and their effects on river ecosystems Authors have provided thoughtful and insightful treatments of specific topics that relate to the broader theme of global change regulation of river ecosystems

The Biology and Ecology of Streams and Rivers Alan Hildrew, Paul Giller, 2023-06-19 The challenges that the world's running water systems now face have never been more numerous or acute at the same time these complex habitats remain absolutely crucial to human wellbeing and future survival If rivers can ever be anything like sustainable ecology needs to take its place as an equal among the physical sciences such as hydrology and geomorphology A real understanding of the natural history and ecology of running waters must now be brought even more prominently into river management The primary purpose of this textbook is to provide the up to date overview that students and practitioners will require to achieve this aim The book's unifying focus is on rivers and streams as ecosystems in which the particular identity of organisms is not the main emphasis but rather the processes in which they are involved specifically energy flow and the cycling of materials It builds on the physicochemical foundations of the habitat template and explores the diversity and adaptations of the biota progressing from the population and community ecology of organisms and linking them to ecosystem processes and services in the wider biosphere via the complexities of species interactions and food webs These include water quality and patterns of river discharge as well as aesthetics waste disposal and environmental health While the book is not primarily focused on application per se each chapter addresses how humans affect rivers and in turn are affected by them A final future oriented chapter identifies key strategic areas and sets a roadmap for integrating knowledge of natural history and ecology into policy and management

The Biology and Ecology of Streams and Rivers is an accessible text suitable for both senior undergraduate and graduate students taking courses in both lotic and general ecology as well as more established researchers practitioners managers and conservationists requiring a concise and contemporary overview of running waters

River and Stream Ecosystems Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 1995

Global Biodiversity in a Changing Environment F. Stuart Chapin, Osvaldo E. Sala, Elisabeth Huber-Sannwald, 2013-12-01 The scientific community has voiced two general concerns about the future of the earth Climatologists and oceanographers have focused on the changes in our physical environment changes in the climate the oceans and the chemistry of the air we breathe Environmental biologists on the other hand have addressed issues of conservation and the extinction of species There is increasing evidence that these two broad concerns are intertwined and mutually dependent Past changes in biodiversity have both responded to and caused changes in Earth's environment In its discussions of ten key terrestrial biomes and freshwater ecosystems this volume uses our broad understanding of global environmental change to present the first comprehensive scenarios of biodiversity for the twenty first century Combining physical earth science with conservation biology Future Scenarios of Global Biodiversity provides a starting point for regional assessments on all scales The book will be of interest to those concerned with guiding research on the changing environment of the earth and with planning future policy especially in accordance with the Global

Biodiversity Convention *Ecology of Streams and Rivers* Eugene Angelier, 2019-05-07 Aiming to describe the role of dominant ecological factors and of human activities on the organisms of running water and the functioning of the ecosystem this work covers the few European water courses that are well known in ecological studies
