Extinction Douglas H. Erwin, 2015-03-22 Some 250 million years ago the earth suffered the greatest biological crisis in its history Around 95 percent of all living species died out a global catastrophe far greater than the dinosaurs demise 185 million years later How this happened remains a mystery But there are many competing theories Some blame huge volcanic eruptions that covered an area as large as the continental United States others argue for sudden changes in ocean levels and chemistry including burps of methane gas and still others cite the impact of an extraterrestrial object similar to what caused the dinosaurs extinction Extinction is a paleontological mystery story Here the world s foremost authority on the subject provides a fascinating overview of the evidence for and against a whole host of hypotheses concerning this cataclysmic event that unfolded at the end of the Permian After setting the scene Erwin introduces the suite of possible perpetrators and the types of evidence paleontologists seek He then unveils the actual evidence moving from China where much of the best evidence is found to a look at extinction in the oceans to the extraordinary fossil animals of the Karoo Desert of South Africa Erwin reviews the evidence for each of the hypotheses before presenting his own view of what happened Although full recovery took tens of millions of years this most massive of mass extinctions was a powerful creative force setting the stage for the development of the world as we know it today In a new preface Douglas Erwin assesses developments in the field since the book s initial publication *Treatise on Geomorphology* ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this *Treatise on Geomorphology* will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the

historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned
