Physics in Oxford, 1839-1939 Robert Fox, Graeme Gooday, 2005-06-16 Physics in Oxford 1839-1939 offers a challenging new interpretation of pre war physics at the University of Oxford which was far more dynamic than most historians and physicists have been prepared to believe It explains on the one hand how attempts to develop the University's Clarendon Laboratory by Robert Clifton Professor of Experimental Philosophy from 1865 to 1915 were thwarted by academic politics and funding problems and latterly by Clifton's idiosyncratic concern with precision instrumentation Conversely by examining in detail the work of college fellows and their laboratories the book reconstructs the decentralized environment that allowed physics to enter on a period of conspicuous vigour in the late nineteenth and early twentieth centuries especially at the characteristically Oxonian intersections between physics physical chemistry mechanics and mathematics Whereas histories of Cambridge physics have tended to focus on the self sustaining culture of the Cavendish Laboratory it was Oxford's college trained physicists who enabled the discipline to flourish in due course in university as well as college facilities notably under the newly appointed professors J S E Townsend from 1900 and F A Lindemann from 1919 This broader perspective allows us to understand better the vitality with which physicists in Oxford responded to the demands of wartime research on radar and techniques relevant to atomic weapons and laid the foundations for the dramatic post war expansion in teaching and research that has endowed Oxford with one of the largest and most dynamic schools of physics in the world

King, 2001 This is the first comprehensive study of an ingenious number notation from the Middle Ages that was devised by monks and mainly used in monasteries A simple notation for representing any number up to 99 by a single cipher somehow related to an ancient Greek shorthand first appeared in early 13th century England brought from Athens by an English monk A second more useful version due to Cistercian monks is first attested in the late 13th century in what is today the border country between Belgium and France with this any number up to 9999 can be represented by a single cipher The ciphers were used in scriptoria for the foliation of manuscripts for writing year numbers preparing indexes and concordances numbering sermons and the like and outside the scriptoria for marking the scales on an astronomical instrument writing year numbers in astronomical tables

and for incising volumes on wine barrels Related notations were used in medieval and Renaissance shorthands and coded scripts This richly illustrated book surveys the medieval manuscripts and Renaissance books in which the ciphers occur and takes a close look at an intriguing astrolabe from 14th century Picardy marked with ciphers With Indices Mit Kings luzider Beschreibung und Bewertung der einzelnen Funde und ihrer Beziehungen wird zugleich die Forschungsgeschichte die bis dato durch Widerspruechlichkeit und Diskontinuit t gepr gt ist umfassend aufgearbeitet Zeitschrift fuer Germanistik
