Autonomous Robot Vehicles Ingemar J. Cox, Gordon T. Wilfong, 2012-12-06

Autonomous robot vehicles are vehicles capable of intelligent motion and action without requiring either a guide or teleoperator control. The recent surge of interest in this subject will grow even further as their potential applications increase. Autonomous vehicles are currently being studied for use as reconnaissance, exploratory vehicles for planetary exploration, undersea land and air environments, remote repair and maintenance, material handling systems for offices and factories, and even intelligent wheelchairs for the disabled. This reference is the first to deal directly with the unique and fundamental problems and recent progress associated with autonomous vehicles. The editors have assembled and combined significant material from a multitude of sources and in effect now conveniently provide a coherent organization to a previously scattered and ill-defined field.
