Speculative Everything, With a new preface by the authors Anthony Dunne, Fiona Raby, 2024-04-02 How to use design as a tool to create not only things but ideas to speculate about possible futures Today designers often focus on making technology easy to use sexy and consumable In Speculative Everything Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas For them design is a means of speculating about how things could be to imagine possible futures This is not the usual sort of predicting or forecasting spotting trends and extrapolating these kinds of predictions have been proven wrong again and again Instead Dunne and Raby pose what if questions that are intended to open debate and discussion about the kind of future people want and do not want Speculative Everything offers a tour through an emerging cultural landscape of design ideas ideals and approaches Dunne and Raby cite examples from their own design and teaching and from other projects from fine art design architecture cinema and photography They also draw

on futurology political theory the philosophy of technology and literary fiction They show us for example ideas for a solar kitchen restaurant a flypaper robotic clock a menstruation machine a cloud seeding truck a phantom limb sensation recorder and devices for food foraging that use the tools of synthetic biology Dunne and Raby contend that if we speculate more about everything reality will become more malleable The ideas freed by speculative design increase the odds of achieving desirable futures
