

An aerial photograph of a cityscape featuring a rooftop building. The building is a multi-story structure with a flat roof, situated on a sloped roof of an existing building. It has a yellowish-brown facade and a small, light-colored roof section. Several red suspension cables are visible, extending from the top of the frame down to the building. The background shows a dense urban environment with various buildings, including a prominent church with a dome and a tall, thin chimney. The sky is overcast with grey clouds.

Rooftop Architecture Building On An Elevated Surface:

Rooftop Architecture Ed Melet, Eric Vreedenburgh, 2005 The land in big cities has been used more intensively but the possibilities are limited One of the leading options for the future is the use of the flat roofs of residential buildings and office blocks as a building site Rooftop buildings can intensify the existing city inject it with new vitality and break through the monofunctionality of a neighbourhood So far the exploitation of rooftop space has been incidental This book analyses and describes the opportunities for realizing projects of this kind as well as the potential difficulties using interesting examples of construction on top of existing buildings in the Netherlands and abroad It will therefore be influential in establishing a benchmark for architecture and urban planning that is a necessity if rooftop architecture is to have a serious future

[The Complex City: Social and Built Approaches and Methods](#) Caroline Donnellan, 2022-10-31 The Complex City Social and Built Approaches and Methods explores different ways of understanding the city The social city approach proceeds from the ground up it focuses on human interactions shaped by economic and environmental processes The built city method looks through a top down lens examining policy and planning for buildings

and infrastructure including utilities and energy networks This volume is different from other city anthologies in that it explores them through their differences by presenting each chapter in one of the two categories While there is invariably an overlap between the two areas they are distinct positions In doing so the book identifies how despite their often adversarial approaches they both belong to the same city As essential components of the city they should not necessarily be resolved as it is in this friction where creativity and innovation happens The Complex City Social and Built Approaches and Methods is concerned about the ideas and solutions that they both offer The book's originality stems from this duality and from its recognition that cities are living organic protean places of opportunity crisis conflict and challenge The chapters demonstrate the complexity of cities as a set of ideas concerning what they engender how they function and why they continue to act as a catalyst for different kinds of human activity They explore issues of socio political import and questions of the city as a physically constructed space The themes are diverse and include the inception of the city as a place of competition to centres of regeneration and urban withdrawal They cover a range of city and urban regions from Athens to Wellington from site specific singular perspectives to comparative assessments The questions they raise include how do we inhabit urban areas how do we make plans for them and how do we at times ignore them entirely

Towards Nearly Zero Energy Annarita Ferrante, 2016-02-18 Towards Nearly Zero Energy Urban Settings in the Mediterranean Climate discusses tactics that can be used to effectively reduce energy consumption towards zero energy With energy usage in buildings accounting for over 40% of primary energy use and 24% of greenhouse gas emissions worldwide this remains an unavoidable objective The book looks at the life of the systems of energy production from renewable sources amidst the exceptionally challenging global economic crisis that the Mediterranean areas and other societies are currently experiencing By using an innovative and interdisciplinary approach of socio oriented technological design the book indicates tools and measures that can be developed at the public legislative and market levels to counterbalance the large pay back times of energy efficiency measures In particular the book displays guidelines and best practices to activate new forms of economic incentives in order to attract potential investors that demonstrate that a large set of possible solutions is technically feasible to achieve nearly zero energy even in high energy consuming circumstances and urban settings Furthermore by discussing and comparing the economic and energy impact of different technology options this work offers guidelines and best practices to activate new cost effective forms and social incentives in order to attract both potential investors and motivate the urban stakeholders toward nearly zero energy Strategies and zero energy solutions for practitioners Policy's and economic resolutions to combat legislative barriers Examples and case studies of nearly zero energy urban environments
