Rooted in Dust Pamela Riney-Kehrberg, 1994 Examines the social impact of drought and depression in Kansas illustrating how both farm and town families dealt with the deprivation by finding odd jobs working in government programmes or depending on federal and private assistance

The Big Empty R. Douglas Hurt, 2011-09 The Great Plains known for grasslands that stretch to the horizon is a difficult region to define Some classify it as the region beginning in the east at the ninety eighth or one hundredth meridian Others identify the eastern boundary with annual precipitation lines soil composition or length of the grass In *The Big Empty* leading historian R Douglas Hurt defines this region using the towns and cities Denver Lincoln and Fort Worth that made a difference in the history of the environment politics and agriculture of the Great Plains Using the voices of women homesteaders agrarian socialists Jewish farmers Mexican meatpackers New Dealers and Native Americans this book creates a sweeping survey of contested race relations radical politics and agricultural prosperity and decline during the twentieth century This narrative shows that even though Great Plains history is fraught with personal and group tensions violence and distress the twentieth century also brought about compelling social economic and political change The only book of its kind this account will be of interest to historians studying the region and to anyone inspired by the story of the men and women who found an opportunity for a better life in the Great Plains **PA.**, 1968

Gupta,2015-10-30 This book provides extensive and comprehensive information to researchers and academicians who are interested in radionuclide contamination its sources and environmental impact It is also useful for graduate and undergraduate students specializing in radioactive waste disposal and its impact on natural as well as manmade environments A number of sites are affected by large legacies of waste from the mining and processing of radioactive minerals Over recent decades several hundred radioactive isotopes radioisotopes of natural elements have been produced artificially including ^{90}Sr ^{137}Cs and ^{131}I Several other anthropogenic radioactive elements have also been produced in large quantities for example technetium neptunium plutonium and americium although plutonium does occur naturally in trace amounts in uranium ores The deposition of radionuclides on vegetation and soil as well as the uptake from polluted aquifers root uptake or irrigation are the initial point for their transfer into the terrestrial environment and into food chains There are two principal deposition processes for the removal of pollutants from the atmosphere dry deposition is the direct transfer through absorption of gases and particles by natural surfaces such as vegetation whereas showery or wet deposition is the transport of a substance from the atmosphere to the ground by snow hail or rain Once deposited on any vegetation radionuclides are removed from plants by the airstream and rain either through percolation or by cuticular wash The increase in biomass during plant growth does not cause a loss of activity but it does lead to a decrease in activity concentration due to effective dilution There is also systemic transport translocation of radionuclides within the plant subsequent to foliar uptake leading the transfer of chemical components to other parts of the plant that have not been contaminated directly **Annual Report of the Commissioner and the Board of Agriculture and Immigration** Virginia.
