Science in Traditional China Joseph Needham,1981 **China pearls** Joseph Needham, *Science in Traditional China* Joseph Needham,1993 **Breathing Spaces** Nancy N. Chen,2003 The charismatic form of healing called qigong which at its core involves meditative breathing exercises achieved enormous popularity in China during the last two decades Anthropologist Nancy N Chen examines the cultural context of medicine and healing practices in the PRC Taiwan and the United States and the pages of her book come alive with the narratives of the numerous practitioners healers psychiatric patients doctors and bureaucrats she interviewed **World Military History Bibliography** Barton Hacker,2003-06-01 Preclassical and indigenous nonwestern military institutions and methods of warfare are the chief subjects of this annotated bibliography of work published 1967 1997 Classical antiquity post Roman Europe and the westernized armed forces of the 20th century although covered receive less systematic attention Emphasis is on historical studies of military organization and the relationships between military and other social institutions rather than wars and battles Especially rich in references to the periodical literature the bibliography is divided into eight parts 1 general and comparative topics 2 the ancient world 3 Eurasia since antiquity 4 sub Saharan Africa and Oceania 5 pre Columbian America 6 postcontact America 7 the contemporary nonwestern world and 8 philosophical social scientific natural scientific and other works not primarily historical **Non-Western Educational Traditions** Timothy G. Reagan,2004-09-22 This text provides a brief yet comprehensive overview of a number of non Western approaches to educational thought and practice Its premise is that understanding the ways that other people educate their children as well as what counts for them as education may help us think more clearly about some of our own assumptions and values and to become more open to alternative viewpoints about important educational matters The value of this informative mind opening text for preservice and in service teacher education courses is enhanced by Questions for Discussion and Reflection and Recommended Further Readings included in each chapter New in the Third Edition Chapter 2 Conceptualizing Culture I We and The Other is new to this edition It is a response to feedback about the problems inherent in our general discourse about culture and in addition provides an example of a culture that is near to us but nevertheless alien the culture of the Deaf World Chapter 9 which deals with Islam and traditional Muslim education has been substantially revised The subtitle of the Third Edition has been changed to Indigenous Approaches to Educational Thought and Practice reflecting not so much a change in the emphases found in the book but rather a recognition of the growing scholarly interest in indigenous peoples their languages cultures and histories Various points throughout the text have been expanded and clarified and chapters have been updated as needed *International Aid and China's Environment* Katherine Morton,2006-05-17 Rapid economic growth in the world s most populous nation is leading to widespread soil erosion desertification deforestation and the depletion of vital natural resources The scale and severity of environmental problems in China now threaten the economic and social foundations of its

modernization Using case studies Morton analyzes the relationship between international and local responses to environmental problems in China challenging the prevailing wisdom that weak compliance is the only constraint upon local environmental management in China It advances two interrelated discussions first it constructs a conceptual framework for understanding the key dimensions of environmental capacity This is broadly defined to encompass the financial institutional technological and social aspects of environmental management Second the book presents the results of an empirical inquiry into the implementation of donor funded environmental projects in both China s poorer and relatively developed regions By drawing upon extensive fieldwork it seeks to explain how and under what conditions international donors can strengthen China s environmental capacity especially at the local level It will be of interest to those studying Chinese politics environmental studies and international relations

The ^AInnate Mind Peter Carruthers,Stephen Laurence,Stephen Stich,2007-01-04 This is the second volume of a projected three volume set on the subject of innateness The volume is highly interdisciplinary and addresses such question as To what extent are mature cognitive capacities a reflection of particular cultures and to what extent are they a product of innate elements How do innate elements interact with culture to achieve mature cognitive capacities How do minds generate and shape cultures How are cultures processed by minds The volume will be of great importance to anyone interested in the interplay between culture and the innate mind

The Economics of Intellectual Property Rights in China Johannes Liegsalz,2010-12-01 The importance of intellectual property rights in industrialized countries as well as in emerging economies has been increasing considerably over the past two decades An important event in the course of this development was the Agreement on Trade Related Aspects of Intellectual Property Rights TRIPS Especially regarding the economic development of the People s Republic of China PRC intellectual property rights have attracted the attention of scientists and decision makers in business and public policy While China meets the basic legal requirements of a well developed system for the application and examination of intellectual property rights the enforcement of these rights still proves to be a major issue Academic research regarding China s IPR system is still sparse Moreover there are considerable gaps in the literature In previous academic studies the examination process at the Chinese State Intellectual Property Office SIPO has not been researched thoroughly Moreover the fundamental relationship between international trade flows foreign direct investment and the design of the patent system in the People s Republic is in need of more detailed analysis In his dissertation Johannes Liegsalz tackles three specific questions immediately related to this nexus He applies multivariate econometric methods to different data sets which were assembled specifically for the purpose of this thesis The first chapter of the thesis analyzes the duration of the examination process for patent applications at the SIPO

Needles, Herbs, Gods, and Ghosts Linda L. BARNES,2009-06-30 When did the West discover Chinese healing traditions Most people might point to the rediscovery of Chinese acupuncture in the 1970s In Needles Herbs Gods and Ghosts Linda Barnes leads us back instead to the thirteenth century to uncover the story of the West s earliest known encounters with

Chinese understandings of illness and healing A medical anthropologist with a degree in comparative religion Barnes illuminates the way constructions of medicine religion race and the body informed Westerners understanding of the Chinese and their healing traditions Before European Hegemony Janet L. Abu-Lughod,1991-02-21 In this important study Abu Lughod presents a groundbreaking reinterpretation of global economic evolution arguing that the modern world economy had its roots not in the sixteenth century as is widely supposed but in the thirteenth century economy a system far different from the European world system which emerged from it Using the city as the working unit of analysis Before European Hegemony provides a new paradigm for understanding the evolution of world systems by tracing the rise of a system that at its peak in the opening decades of the 14th century involved a vast region stretching between northwest Europe and China Writing in a clear and lively style Abu Lughod explores the reasons for the eventual decay of this system and the rise of European hegemony **Resiliency and Capacity Building in Inner-city Learning Communities** Dawn Leigh

Sutherland,Laura Sokal,2003 The voices that are represented in this book offer differing perspectives on ways to support inner city children and families Each essay offers a unique contribution to our understanding of the interdependence of the people in these communities yet all share the common message that inner city children and families have strengths that can be built on to maximize their positive outcomes This book is especially relevant to teachers who work with children and families with challenges Accommodating the Chinese Michelle Campbell Renshaw,2005-04-02 This in depth comparative study demonstrates that the hospital established in China its planning and architecture financing and all aspects of day to day operation differed from its counterpart at home These differences were never due to a single or even dominant cause They were a result of a complex process involving accommodation appreciation negotiation opportunism and pragmatism

Cultural Centrality and Political Change in Chinese History Roger V. Des Forges,2003 The Ming period of Chinese history is often depicted as one of cultural aridity political despotism and social stasis Recent studies have shown that the arts continued to flourish government remained effective people enjoyed considerable mobility and China served as a center of the global economy This study goes further to argue that China s perennial quest for cultural centrality resulted in periodic political changes that permitted the Chinese people to retain control over social and economic developments The study focuses on two and a half million people in three prefectures of northeast Henan the central province in the heart of the central plain a common synecdoche for China The author argues that this population may have been more representative of the Chinese people at large than were the residents of more prosperous regions Many diverse individuals in northeast Henan invoked historical models to deal with the present and shape the future Though they differed in the lessons they drew they shared the view that the Han dynasty was particularly relevant to their own time Han and Ming politics were integral parts of a pattern of Chinese historical development that has lasted to the present **Imagined Civilizations** Roger

Hart,2013-08-15 Roger Hart debunks the long held belief that linear algebra developed independently in the West Accounts

of the seventeenth century Jesuit Mission to China have often celebrated it as the great encounter of two civilizations. The Jesuits portrayed themselves as wise men from the West who used mathematics and science in service of their mission. Chinese literati official Xu Guangqi 1562-1633 who collaborated with the Italian Jesuit Matteo Ricci 1552-1610 to translate Euclid's Elements into Chinese reportedly recognized the superiority of Western mathematics and science and converted to Christianity. Most narratives relegate Xu and the Chinese to subsidiary roles as the Jesuits' translators, followers, and converts. *Imagined Civilizations* tells the story from the Chinese point of view. Using Chinese primary sources, Roger Hart focuses in particular on Xu who was in a position of considerable power over Ricci. The result is a perspective startlingly different from that found in previous studies. Hart analyzes Chinese mathematical treatises of the period, revealing that Xu and his collaborators could not have believed their declaration of the superiority of Western mathematics. *Imagined Civilizations* explains how Xu's West served as a crucial resource. While the Jesuits claimed Xu as a convert, he presented the Jesuits as men from afar who had traveled from the West to China to serve the emperor.

How Europe Made the Modern World
Jonathan Daly, 2019-10-03 One thousand years ago a traveler to Baghdad or the Chinese capital Kaifeng would have discovered a vast and flourishing city of broad streets, spacious gardens, and sophisticated urban amenities. Meanwhile, Paris, Rome, and London were cramped and unhygienic collections of villages, and Europe was a backwater. How then did it rise to world preeminence over the next several centuries? This is the central historical conundrum of modern times. *How Europe Made the Modern World* draws upon the latest scholarship dealing with the various aspects of the West's divergence, including geography, demography, technology, culture, institutions, science, and economics. It avoids the twin dangers of Eurocentrism and anti-Westernism, strongly emphasizing the contributions of other cultures of the world to the West's rise while rejecting the claim that there was nothing distinctive about Europe in the premodern period. Daly provides a concise summary of the debate from both sides, whilst also presenting his own provocative arguments. Drawing on a wide range of primary and secondary sources and including maps and images to illuminate key evidence, this book will inspire students to think critically and engage in debates rather than accepting a single narrative of the rise of the West. It is an ideal primer for students studying Western Civilization and World History courses.

Contours of the World Economy 1-2030 AD
Angus Maddison, 2007-09-20 This book seeks to identify the forces which explain how and why some parts of the world have grown rich and others have lagged behind. Encompassing 2000 years of history, part 1 begins with the Roman Empire and explores the key factors that have influenced economic development in Africa, Asia, the Americas, and Europe. Part 2 covers the development of macroeconomic tools of analysis from the 17th century to the present. Part 3 looks to the future and considers what the shape of the world economy might be in 2030. Combining both the close quantitative analysis for which Professor Maddison is famous with a more qualitative approach that takes into account the complexity of the forces at work, this book provides students and all interested readers with a totally fascinating overview of world economic history. Professor

Maddison has the unique ability to synthesise vast amounts of information into a clear narrative flow that entertains as well as informs making this text an invaluable resource for all students and scholars and anyone interested in trying to understand why some parts of the World are so much richer than others *Modes of Thought* Wolfgang Fikentscher, 2004

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 1997-07-31
The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa **Assessing Water Rights in China** Yahua Wang, 2017-09-14 This book presents a model for describing the hierarchical concept of China's water rights structure one which takes into account pioneering theories on natural resources and environmental institutional economics It highlights the basic theory of water rights with a view to helping Chinese policymakers acquire a deeper understanding of water rights and the need for a reform program in the long term development of water poor China To do so it draws on three main sources Cheung SNS's Economic Explanation Douglas C North's New Economic History and Ray Huang's Macro History The book makes two essential contributions it elaborates the hierarchical water governance structure in China which originated in the Qin Dynasty that unified the country 2000 years ago and has been employed without interruption ever since further it constructs a choice model for water governance structures and advances the logic of making structural choices with minimum transaction costs under constraint conditions while also explaining the inherent nature of China's choice for the hierarchical structure from the perspectives of management cost and cooperation cost As such the book enriches and builds on the theories of the water governance school represented by Karl Marx Karl Wittfogel and Ray Huang laying the foundation for the further study of water rights theory in contemporary China
