Nuclear Corrosion Science and Engineering Damien Feron, 2012-02-21 Corrosion of nuclear materials i e the interaction between these materials and their environments is a major issue for plant safety as well as for operation and economic competitiveness Understanding these corrosion mechanisms the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry Combining assessment techniques and analytical models into this understanding allows operators to predict the service life of corrosion affected nuclear plant materials and to apply the most appropriate maintenance and mitigation options to ensure safe long term operation This book critically reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Initial sections introduce the complex field of nuclear corrosion science with detailed chapters on the different types of both

aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them This is complemented by reviews of monitoring and control methodologies as well as modelling and lifetime prediction approaches Given that corrosion is an applied science the final sections review corrosion issues across the range of current and next generation nuclear reactors and across such nuclear applications as fuel reprocessing facilities radioactive waste storage and geological disposal systems With its distinguished editor and international team of expert contributors Nuclear corrosion science and engineering is an invaluable reference for nuclear metallurgists materials scientists and engineers as well as nuclear facility operators regulators and consultants and researchers and academics in this field Comprehensively reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Chapters assess different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them Considers monitoring and control methodologies as well as modelling and lifetime prediction approaches Effects of Radiation on Materials R. K. Nanstad,1999 Performance Assessment of Concrete Structures and Engineered Barriers for Nuclear Applications Valérie L'Hostis,Robert Gens,2016-09-06 The main outcomes of RILEM TC 226 CNM are summarized in this book Key input was provided by researchers from countries that are main contributors in the R degradation processes phenomenological modelling field experiences tests approaches instrumentation and monitoring methods dedicated to performance assessments service life models aging Management of Nuclear Power Plants repair techniques codes and standards specific to radioactive waste facilities **Report 19: Considerations for Use in Managing the Aging of Nuclear Power Plant Concrete Structures: State-of-the-Art Report of RILEM Technical Committee 160-MLN** Dan J. Naus,1999 Ninth International Symposium on Environmental Degradation of Materials in Nuclear Power Systems Steve Bruemmer,Peter Ford,Gary Was,2013-10-18 This collection presents an exchange of ideas among scientists and engineers about the economic and safety concerns surrounding environmentally induced materials problems which lead to nuclear power plant outages Scientists and engineers concerned with the environmental degradation processes corrosion mechanical and radiation effects present their latest results on such topics as life extension relicensing and materials problems associated with spent fuel storage and radioactive waste disposal This collection will be of interest to utility engineers reactor vendor engineers plant architect engineers researchers concerned with materials degradation and consultants involved in design construction and operation of water reactors **Understanding and Mitigating Ageing in Nuclear Power Plants** Philip G Tipping,2010-10-26 Plant life management PLiM is a methodology focussed on the safety first management of nuclear power plants over their entire lifetime It incorporates and builds upon the usual periodic safety reviews and licence renewals as part of an overall framework designed to assist plant operators and regulators in assessing the operating conditions of a nuclear power plant and establishing the technical and economic requirements for safe long term operation Understanding and mitigating ageing in nuclear power plants critically reviews the fundamental ageing

degradation mechanisms of materials used in nuclear power plant structures systems and components SSC along with their relevant analysis and mitigation paths as well as reactor type specific PLiM practices Obsolescence and other less obvious ageing related aspects in nuclear power plant operation are also examined in depth Part one introduces the reader to the role of nuclear power in the global energy mix and the importance and relevance of plant life management for the safety regulation and economics of nuclear power plants Key ageing degradation mechanisms and their effects in nuclear power plant systems structures and components are reviewed in part two along with routes taken to characterise and analyse the ageing of materials and to mitigate or eliminate ageing degradation effects Part three reviews analysis monitoring and modelling techniques applicable to the study of nuclear power plant materials as well as the application of advanced systems structures and components in nuclear power plants Finally Part IV reviews the particular ageing degradation issues plant designs and application of plant life management PLiM practices in a range of commercial nuclear reactor types With its distinguished international team of contributors Understanding and mitigating ageing in nuclear power plants is a standard reference for all nuclear plant designers operators and nuclear safety and materials professionals and researchers Introduces the reader to the role of nuclear power in the global energy mix Reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures systems and components SSC Examines topics including elimination of ageing effects plant design and the application of plant life management PLiM practices in a range of commercial nuclear reactor types

Nuclear Power in Stagnation David Toke, Geoffrey Chun-Fung Chen, Antony Froggatt, Richard Connolly, 2021-03-08 This book studies the extent to which nuclear safety issues have contributed towards the stagnation of nuclear power

development around the world and accounts for differences in safety regulations in different countries In order to understand why nuclear development has not met widespread expectations this book focusses on six key countries with active nuclear power programmes the USA China France South Korea the UK and Russia The authors integrate cultural theory and theory of regulation and examine the links between pressures of cultural bias on regulatory outcomes and political pressures which have led to increased safety requirements and subsequent economic costs They discover that although nuclear safety is an important upward driver of costs in the nuclear power industry this is influenced by the inherent need to control potentially dangerous reactions rather than stricter nuclear safety standards The findings reveal that differences in the strictness of nuclear safety regulations between different countries can be understood by understanding differences in cultural contexts and the changes in this over time This book will be of great interest to students scholars and policymakers working on energy policy and regulation environmental politics and policy and environment and sustainability more generally

Comprehensive Nuclear Materials, 2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues
