## **Sewall Wright And Evolutionary Biology:**

**Sewall Wright and Evolutionary Biology** William B. Provine, 1989      **Evolution** Sewall Wright, 1986 All of Sewall Wright's published papers on evolution up to 1950 and a few published later are gathered in this volume William Provine's introductions to each paper include pertinent references to related portions of Provine's *Sewall Wright and Evolutionary Biology* and Wright's four volume masterwork *Evolution and the Genetics of Populations* By comparing the papers in this volume with the corresponding topics in the larger work it is possible to determine the respects in which Wright extended, changed or remained constant in his ideas over a period of sixty years Wright's shifting balance theory of evolution first conceived in 1925 has proved enormously useful in modern evolutionary biology Wright's international prestige has never been higher than it is currently and the time is ripe for a rereading of his seminal papers These papers are not only historically important for understanding the period of the evolutionary synthesis of the 1930s and 1940s but continue to be stimulating and useful to working evolutionary biologists today      **Sewall Wright Taught Me: Evolution** Robert Evan Sloan, Joe Cain, Sewall Wright, 2007 While a master's student at the University of Chicago in 1951-1952 Robert Sloan attended Sewall Wright's lecture courses He made copious notes which provide a detailed record of Wright's teaching This book reprints those notes      **Sewall Wright Taught Me** Robert Evan Sloan, Joe Cain, Sewall Wright, 2007 While a master's student at the University of Chicago in 1951-1952 Robert Sloan attended Sewall Wright's lecture courses He made copious notes which provide a detailed record of Wright's teaching This book reprints those notes      *The Adaptive Landscape in Evolutionary Biology* Erik I. Svensson, Ryan Calsbeek, 2012-05-17 The Adaptive Landscape has been a central concept in population genetics and evolutionary biology since this powerful metaphor was first formulated in 1932 This volume brings together historians of science, philosophers, ecologists and evolutionary biologists to discuss the state of the art from several different perspectives      **Sewall Wright, Geneticist and Evolutionist** William B. Provine, Arthur James Cain, William B. Provine Collection on Evolution and Genetics, 1986 Typescript preliminary draft of a book lightly edited in a few places The book was later published under the title *Sewall Wright and evolutionary biology* An alternate version of pages 562-588 is laid in following the spiral bound text      *The Founders of Evolutionary Genetics* S. Sarkar, 2012-12-06 genetics It is simply the appropriation of that term very likely with insufficient knowledge and respect for its past usage For that the Editor alone is responsible and requests tolerance He has as far as he can tell no intention or desire to use it for any historiographical purposes other than that just mentioned Even more important the decision to consider Muller together with Fisher, Haldane and Wright is also not original Crow 1984 has already done so arguing persuasively that Muller was keenly interested in evolution and made substantial contributions to the development of the neo-Darwinian view Crow's reasons for considering these four figures together and the reasons discussed above are complementary This book continues a historiographical choice he initiated others will have to judge whether it is appropriate The foregoing considerations were intended to show

why Fisher Haldane Muller and Wright should be considered together in the history of theoretical evolutionary genetics I By a welcome stroke of luck from the point of view of the Editor all four of these figures were born almost together between 1889 and 1892 and almost exactly a century ago It therefore seemed appropriate to use their birth centenaries to consider their work together A conference was held at Boston University on March 6 1990 under the auspices of the Boston Center for the Philosophy and History of Science to discuss their work This book has emerged mainly from that conference

**Evolution and the Genetics of Populations, Volume 4** Sewall Wright, 1984-06-15 These volumes discuss evolutionary biology through the lense of population genetics **Evolution and the Genetics of Populations, Volume 1** Sewall

Wright, 1984-06-15 These volumes discuss evolutionary biology through the lense of population genetics **Evolutionary Biology: Contemporary and Historical Reflections Upon Core Theory** Thomas E. Dickins, Benjamin J.A.

Dickins, 2023-03-08 This book is reflecting upon core theories in evolutionary biology in a historical as well as contemporary context It exposes the main areas of interest for discussion but more importantly draws together hypotheses and future research directions The Modern Synthesis MS sometimes referred to as Standard Evolutionary Theory SET in evolutionary biology has been well documented and discussed but was also critically scrutinized over the last decade Researchers from diverse disciplinary backgrounds have claimed that there is a need for an extension to that theory and have called for an Extended Evolutionary Synthesis EES The book starts with an introductory chapter that summarizes the main points of the EES claim and indicates where those points receive treatment later in the book This introduction to the subjects can either serve as an initiation for readers new to the debate or as a guide for those looking to pursue particular lines of enquiry The following chapters are organized around historical perspectives theoretical and philosophical approaches and the use of specific biological models to inspect core ideas Both empirical and theoretical contributions have been included The majority of chapters are addressing various aspects of the EES position and reflecting upon the MS Some of the chapters take historical perspectives analyzing various details of the MS and EES claims Others offer theoretical and philosophical analyses of the debate or take contemporary findings in biology and discuss those findings and their possible theoretical interpretations All of the chapters draw upon actual biology to make their points This book is written by practicing biologists and behavioral biologists historians and philosophers many of them working in interdisciplinary fields It is a valuable resource for historians and philosophers of biology as well as for biologists Chapters 8 20 22 and 33 are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) **Evolution and the Genetics of Populations** Sewall Wright, 1968 *The Evolution Controversy in America* George E. Webb, 2021-05-11 A comprehensive intellectual history of America's century old debate over teaching evolution in public schools For well over a century the United States has witnessed a prolonged debate over the teaching of organic evolution in the nation's public schools The controversy that began with the publication of Darwin's *Origin of the Species* had by the 1920s expanded to include

theologians politicians and educators The Scopes trial of 1925 provided the growing antievolution movement with significant publicity and led to a decline in the teaching of evolution In The Evolution Crisis in America George E Webb details how efforts to improve science education in the wake of Sputnik resurrected antievolution sentiment and led to the emergence of creation science as the most recent expression of that sentiment Creationists continue to demand balanced treatment of theories of creation and evolution in public schools even though their efforts have been declared unconstitutional in a series of federal court cases Their battles have been much more successful at the grassroots level garnering support from local politicians and educators Webb attributes the success of creationists primarily to the lack of scientific literacy among the American public

**Philosophy of Evolutionary Biology** Stefan Linquist, 2017-03-02 The impact of evolutionary theory on the philosophy of science has been no less profound than its impact on the science of biology itself Advances in this theory provide a rich set of examples for thinking about the nature of scientific explanation and the structure of science Many of the developments in our understanding of evolution resulted from contributions by both philosophers and biologists engaging over theoretical questions of mutual interest This volume traces some of the most influential exchanges in this field over the last few decades Focal topics include the nature of biological functions adaptationism as an explanatory and methodological doctrine the levels of selection debate the concepts of fitness and drift and the relationship of evolutionary to developmental biology

Descended from Darwin Joe Cain, Michael Ruse, 2009 This vol has its origins in a conference held October 22-23 2004 at the Amer Philosophical Society APS Library Phila The main focus was on evolutionary studies in America before during and after the famous synthesis period of the 1930s and 1940s The synthesis period has been the focus of substantial new research and important new thinking This vol brings together 15 specialists to explore these developments and to press further Questions shaping these essays focus on the following broad themes Continuity and breaks across generations Emerging narratives for the period New research opportunities at the APS New ideas from the research front Placing evolutionists in the broader context of biology and Future directions Also includes a thoughtful intro by Michael Ruse

**Evolution** Michael Ruse, Joseph Travis, 2009-02-28 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope Evolution opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development evo devo and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linneaus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Piltdown Man to the Scopes trial and social Darwinism Readers

will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the *Origin of Species* this volume is a fitting tribute to the science Darwin set in motion

**Towards a Theory of Development** Alessandro Minelli, Thomas Pradeu, 2014 Is it possible to explain and predict the development of living things What is development Articulate answers to these seemingly innocuous questions are far from straightforward To date no systematic targeted effort has been made to construct a unifying theory of development This novel work offers a unique exploration of the foundations of ontogeny by asking how the development of living things should be understood It explores the key concepts of developmental biology asks whether general principles of development can be discovered and examines the role of models and theories The two editors one a biologist with long interest in the theoretical aspects of his discipline the other a philosopher of science who has mainly worked on biological systems have assembled a team of leading contributors who are representative of the scientific and philosophical community within which a diversity of thoughts are growing and out of which a theory of development may eventually emerge They analyse a wealth of approaches to concepts models and theories of development such as gene regulatory networks accounts based on systems biology and on physics of soft matter the different articulations of evolution and development symbiont induced development as well as the widely discussed concepts of positional information and morphogenetic field the idea of a programme of development and its critiques and the long standing opposition between preformationist and epigenetic conceptions of development *Towards a Theory of Development* is primarily aimed at students and researchers in the fields of evo devo developmental biology theoretical biology systems biology biophysics and the philosophy of science

**Evolutionary Genetics** Charles W. Fox, Jason B. Wolf, 2006-04-27 Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting edge primer introducing readers to the major concepts in modern evolutionary genetics This book spans the continuum of scale from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution and the continuum of time from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in depth enough to be of value to established researchers in evolution biology

Masterminding Nature Margaret E. Derry, 2015-01-01 Canadian historian Margaret Derry examines the evolution of modern animal breeding from the invention of improved breeding methods in 18th century England to the application of molecular genetics in the 1980s and 1990s

*Genes in Ecology* R. J. Berry, T. J. Crawford, G. M. Hewitt, 1992-08 Geneticists and ecologists confront the implications of the other's discipline for their own work

*The Earth Encompassed* Peter J. Bowler, 2000 An accessible and comprehensive history of discoveries and outlooks that culminated in the modern discipline of environmental studies
