## **Making Shaping And Treating Of Steel Ironmaking Volume:**

**The Making, Shaping, and Treating of Steel: Ironmaking volume**, 1999      **The Making, Shaping, and Treating of Steel: Ironmaking volume** R. J. Fruehan, 1998      **Mechanics of Offshore Pipelines** Stelios Kyriakides, Edmundo Corona, 2007-07-26 Offshore oil and gas production was conducted throughout the entire 20th century but the industry's modern importance and vibrancy did not start until the early 1970s when the North Sea became a major producer. Since then the expansion of the offshore oil industry has been continuous and rapid. Pipelines and more generally long tubular structures are major oil and gas industry tools used in exploration, drilling, production, and transmission. Installing and operating tubular structures in deep waters places unique demands on them. Technical challenges within the field have spawned significant research and development efforts in a broad range of areas. Volume I addresses problems of buckling and collapse of long inelastic cylinders under various loads encountered in the offshore arena. Several of the solutions are also directly applicable to land pipelines. The approach of *Mechanics of Offshore Pipelines* is problem oriented. The background of each problem and scenario are first outlined and each discussion finishes with design recommendations. New and classical problems addressed investigated through a combination of experiments and analysis. Each chapter deals with a specific mechanical problem that is analyzed independently. The fundamental nature of the problems makes them also applicable to other fields including tubular components in nuclear reactors and power plants, aerospace structures, automotive and civil engineering structures, naval vehicles and structures.

**IRON MAKING AND STEELMAKING** GHOSH, AHINDRA, CHATTERJEE, AMIT, 2008-02-29 This authoritative account covers the entire spectrum from iron ore to finished steel. It begins by tracing the history of iron and steel production right from the earlier days to today's world of oxygen steelmaking, electric steelmaking, secondary steelmaking, and continuous casting. The physicochemical fundamental concepts of chemical equilibrium, activity, composition relationships, and structure properties of molten metals are introduced before going into details of transport phenomena, i.e., kinetics, mixing, and mass transfer in ironmaking and steelmaking processes. Particular emphasis is laid on the understanding of the fundamental principles of the processes and their application to the optimisation of actual processes. Modern developments in blast furnaces, including modelling and process control, are discussed along with an introduction to the alternative methods of ironmaking. In the area of steelmaking, BOF plant practice, including pre-treatment of hot metal, metallurgical features of oxygen steelmaking processes, and their control, form part of the book. It also covers basic open hearth, electric arc furnace, and stainless steelmaking before discussing the area of casting of liquid steel, ingot casting, continuous casting, and near net shape casting. The book concludes with a chapter on the status of the ironmaking and steelmaking in India. In line with the application of theoretical principles, several worked-out examples dealing with fundamental principles as applied to actual plant situations are presented. The book is primarily intended for undergraduate and postgraduate students of metallurgical engineering. It would also be immensely useful to researchers in
