decline to different areas The effects of the crisis on individual regions is examined in detail and the author emphasizes that it is not only the traditional areas of recession such as the North East that were affected but also the manufacturing centres of the Midlands and the normally prosperous South East Alternative explanations of the distribution of employment are examined and the adequacy of previous explanations of unequal growth and decline are questioned The book also looks at the extent to which New Towns have suffered in the crisis and whether the well established consensus about the merits of regional planning has been broken down by the recession

The UK Regional-National Economic Problem Philip McCann, 2016-03-10 In recent years the United Kingdom has become a more and more divided society with inequality between the regions as marked as it has ever been In a landmark analysis of the current state of Britain's regional development Philip McCann utilises current statistics examines historical trends and makes pertinent international comparisons to assess the state of the nation The UK Regional National Economic Problem brings attention to the highly centralised top down governance structure that the UK deploys and demonstrates that it is less than ideally placed to rectify these inequalities The North South divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity incomes

employment status and wealth Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland in contrast the Midlands the North of England Northern Ireland and Wales lag behind by most measures of prosperity This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored The UK s economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends although this definitive study suggests that some areas of improvement are possible if they are well implemented This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government Health and disease in tropical Africa Akhtar R,1987-01-31

Decision Making in Britain ,1971 English Folk Poetry Roger deV. Renwick,2016-11-11 Drawing on the long tradition of folklore study Roger deV Renwick examines three genres traditional English folksongs local songs of regional interest and working class poetry In the span of time that extends from the eighteenth to the twentieth century he finds govern world views underlying a large sampling of poems related by common language imagery or topic and then shows how these world views relate to the everyday lives and beliefs of the poetry s makers and users There is in addition a pattern of historical continuity that links the rural folksongs of the eighteenth century with the part rural part urban local songs of the nineteenth and twentieth centuries and with the fully urban working class poetry of the present day English Folk Poetry is an immensely important contribution to folklore scholarship in its examination of contemporary working class poetry in its approach to questions of tacit meaning and in its exploration of the relationship of inferential meanings to real everyday lives

'Whither regional studies?' Andy Pike,2013-09-13 Regional studies are at a vibrant conjuncture Regions continue to provide a conceptual and analytical focus for often overlapping concerns with economic social political cultural and ecological change In the context of increased interest in inter and multi disciplinary approaches regions remain an arena in which synthesis across disciplines economics geography planning politics and sociology can take place Yet recent work has raised fundamental questions about how we think about and research regions and regional change development governance and regulation First emergent conceptual ideas have introduced new thinking about space place and scale that interprets regions as unbounded relational spaces This work has disturbed notions of regions as bounded territories and questioned hierarchical systems of scale through more complex multi scalar approaches Second research methodology has grown in sophistication and sensitivity but remains somewhat polarised between the binaries of positivist often quantitative and more theoretically diverse typically qualitative approaches Last regional governance policy and politics are wrestling with the conceptual methodological and political complexities of new modes and geographies of governance and emergent multi agent and multi level institutional architectures This book brings together important voices in regional studies to contribute to and reflect upon these current issues and debates While we are at an early stage in beginning to think through what such conceptual theoretical methodological governance policy and political innovations and developments mean for regional studies the magnitude and resonance of such issues underpin the vitality of research on the region This book was published as a special issue of Regional Studies
