Brian Lowry,1997 The Role of Trees in Sustainable Agriculture R.T. Prinsley,2012-12-06 Agroforestry reserach and development in Australia has been largely fragmented and many of the research results have never been published and are unknown The purpose of this volume is to comprehensively review all of the research that has taken place in the field of agroforestry in Australia including previously unpublished results providing readers with the latest technical and economic information about using trees in agriculture for the control of salinity and erosion for shelter and shade and for the production of timber fodder and minor forest products The book provides information concerning planted trees within all of these categories and includes special review of the management of native vegetation on farms These papers also examine research needs where appropriate This book stems from the National Australian Conference on The Role of Trees in Sustainable Agriculture which took place in Albury Victoria Australia in October 1991 Each national review paper is based upon a summary of six or more state review research and development papers prepared specifically for the national conference The book thus provides readers with a comprehensive overview of agroforestry rsearch in Australia which is introduced and summarised in the first chapter *Environmental Project Management* Ebenezer A. Sholarin,Joseph L. Awange,2016-04-22 This book offers a new framework that facilitates the development of more intelligent systems and methods for data analysis and international information sharing such as the use of satellite imaging and geospatial data to predict changes in weather conditions and shifts in water levels and to assess the extent of the forest cover remaining on Earth that is visible from space It brings together the many aspects of science and technology as well as formula and analytical approaches required for more informed decision making It also highlights the vital importance of understanding

the technological economic and social dimensions of environmental projects that have short term results and long term impacts It is unique in that it clearly distinguishes between environmental project management EnvPM and green project management GreenPM and presents an amalgamation of environmental management and project management concepts using geospatial methods to form an EnvPM concept The book sets a benchmark for the professionalism with which environmental projects should be planned executed monitored assessed and delivered While primarily intended for professionals responsible for the management of environmental projects or interested in improving the overall efficiency of such projects it is also a useful handbook for managers in the private public and non for profit sectors It is a valuable resource for students at both undergraduate and master s levels and an indispensable guide for anyone wanting to develop their skills in modern project management environmental management and geospatial techniques We are the first generation to feel the impact of climate change and the last generation that can do something about it US President Obama s address to the United Nations on Climate Change and Global warming 2015 hison This book provides an in depth well researched and science based approach to applying key project management and spatial tools and practices in environmental projects An important read for leaders considering projects that balance social economic growth against minimising its ill effects on Planet Earth Todd Hutchison Global Chairman of Peopleistic group

**Regreening the Bare Hills** David Lamb,2010-10-14 In *Regreening the Bare Hills* Tropical Forest Restoration in the Asia Pacific Region David Lamb explores how reforestation might be carried out both to conserve biological diversity and to improve the livelihoods of the rural poor While both issues have attracted considerable attention in recent years this book takes a significant step by integrating ecological and silvicultural knowledge within the context of the social and economic issues that can determine the success or failure of tropical forest landscape restoration Describing new approaches to the reforestation of degraded lands in the Asia Pacific tropics the book reviews current approaches to reforestation throughout the region paying particular attention to those which incorporate native species including in multi species plantations It presents case studies from across the Asia Pacific region and discusses how the silvicultural methods needed to manage these new plantations will differ from conventional methods It also explores how reforestation might be made more attractive to smallholders and how trade offs between production and conservation are most easily made at a landscape scale The book concludes with a discussion of how future forest restoration may be affected by some current ecological and socio economic trends now underway The book represents a valuable resource for reforestation managers and policy makers wishing to promote these new silvicultural approaches as well as for conservationists development experts and researchers with an interest in forest restoration Combining a theoretical research perspective with practical aspects of restoration the book will be equally valuable to practitioners and academics while the lessons drawn from these discussions will have relevance elsewhere throughout the tropics
