Anu Bashamboo, Kenneth David McElreavey, 2012-04-20 Male infertility is a multifaceted disease where genetic epigenetic and environmental factors all contribute to the development of the phenotype In recent years there has been an increasing concern about a decline in reproductive health paralleled by an increase in demand for infertility treatments This calls for a detailed and thorough understanding of normal and aberrant testicular function and the environmental influences on the establishment and integrity of the male germ cell This is crucial for understanding the complex pathophysiology of male infertility and eventual success of Assisted Reproductive Technologies *Reproductomics* José A. Horcajadas, Jaime Gosálvez, 2018-07-13 Recent advances in genomic and omics analysis have triggered a revolution affecting nearly every field of medicine including reproductive medicine obstetrics gynecology andrology and infertility treatment *Reproductomics The Omics Revolution and Its Impact on Human Reproductive Medicine* demonstrates how various omics technologies are already aiding fertility specialists and clinicians in characterizing patients counseling couples towards pregnancy success informing embryo selection and supporting many other positive outcomes A diverse range of chapters from international experts examine the complex relationship between genomics transcriptomics proteomics and metabolomics and their role in human reproduction identifying molecular factors of clinical significance With this book Editors Jaime Gosálvez and José A Horcajadas have provided researchers and clinicians with a strong foundation for a new era of personalized reproductive medicine Thoroughly discusses how genomics and other omics approaches aid clinicians in various areas of reproductive medicine Identifies specific genomic and molecular factors of translational value in treating infertility and analyzing patient data Features chapter contributions by leading international experts **A Comprehensive Handbook of IVF** Sushma Deshmukh, Bindu Chimote, 2024-02-03 In vitro fertilisation IVF is one of several techniques available to help people with fertility problems have a baby During IVF an egg is removed from the woman's ovaries and fertilised with sperm in a laboratory The fertilised egg called an embryo is then returned to the woman's womb to grow and develop This book is a complete guide to IVF for specialists and trainees in reproductive medicine Divided into two parts the first sections discuss clinical aspects of IVF including laboratory set up patient selection and preparation drugs and stimulation protocols male infertility the operating theatre and assisted reproductive technology ART techniques special situations such as endometriosis and recurrent implantation failure and recent advances in ART The second part of the book covers laboratory aspects explaining the physical and practical processes of IVF including management of culture conditions quality control male and female gametes embryo gradation and implantation cryopreservation and sperm freezing and advanced embryology With a recognised international team of authors this comprehensive text is further enhanced by diagrams and figures to assist learning Reactive Oxygen Species and Male Fertility Cristian O'Flaherty, 2020-12-02 Reactive oxygen species ROS are inevitable by products of aerobic cells A delicate balance between ROS production and antioxidant defences is essential to assure cell function This requirement is also true for the spermatozoon the male gamete with the unique goal of carrying

and delivering the paternal genome into the oocyte Oxidative stress promotes damage in lipids proteins and DNA of spermatozoa and this oxidative damage is associated with infertility The ROS dependent damage could occur at different stages of the production and maturation of the sperm On the other hand low and controlled levels of ROS are necessary to trigger and regulate sperm function When ejaculated spermatozoa are incapable of fertilizing the egg They must reside in the oviduct of the female genital tract to undergo a yet to be understood the biochemical process called capacitation Once capacitated the spermatozoon undergoes the exocytotic event called acrosome reaction and fertilize the oocyte ROS regulate the different molecular mechanisms such as sperm motility capacitation and acrosome reaction to assure fertilization This Special Issue includes original research and reviews of literature concerning the role of reactive oxygen species in male reproduction particularly the role of antioxidants in the regulation of male fertility as well as basic and clinical studies using antioxidant based strategies for the treatment of male infertility

**Human Semen Analysis** Ashok Agarwal, Florence Boitrelle, Ramadan Saleh, Rupin Shah, 2024-07-16 Infertility is an important public health problem affecting around 15% of couples worldwide A male factor contributes to about 50% of all cases of infertility Male infertility could be related to a variety of congenital or acquired causes that lead to abnormal reproductive potential and poor sperm quality and function To this date semen analysis remains the cornerstone of male infertility evaluation Clinicians widely reference the World Health Organization WHO Laboratory Manual for the Examination and Processing of Human Semen which provides a detailed description of a variety of semen tests However the manual does not provide a sufficient clinical context for the various tests that are described This book is intended to bridge the gap between the laboratory manual and the clinician by explaining in detail the test indication its clinical utility interpretation of results and presenting a decision algorithm based on the test results The book has 19 chapters grouped under seven sections that follow the chapters of the sixth edition of the WHO manual Each chapter is written and reviewed by a team of senior clinicians thus bringing a perspective that is truly clinically relevant This book will be of great value to all clinicians involved in the management of male infertility and will also be of interest to laboratory scientists involved in semen testing by providing them with clinical perspectives of the test they perform Human Semen Analysis From the WHO Manual to the Clinical Management of Infertile Men is a useful guide for utilizing the WHO manual interpreting test results and deciding what subsequent clinical actions to take

Male Fertility and Infertility T. D. Glover, C. L. R. Barratt, 2009-03-19 This contemporary account of male fertility provides a much needed bridge between those seeking to understand the subject from an evolutionary and biological perspective and those with clinical responsibility for the investigation and treatment of infertility Accordingly the first half of the book deals with the evolutionary aspects of male reproduction and sperm competition sperm production and delivery in man and other animals spermatogenesis and epididymal function sperm transport in the female tract and the apparent decline in human sperm count The second part of the book puts greater emphasis on clinical problems and opens with a discussion of

intracytoplasmic sperm injection its value and limitations This is followed by a review of modern developments in the genetics of male fertility and proceeds to a further chapter on the role of surgical procedures used in the treatment Semen analysis is critically reviewed and the molecular techniques now being used in preimplantation diagnosis and in the study of mitochondrial inheritance are fully described Taken together these chapters written by an international team of authors illustrate the breadth of vision needed to tackle the problem of male fertility

**Male Infertility** T.B. Hargreave, 2012-12-06
