**The Origins of Health and Disease** Michael E. Hyland, 2011-04-21 Some phenomena in medicine and psychology remain unexplained by current theory Chronic fatigue syndrome repetitive strain injury and irritable bowel syndrome for example are all diseases or syndromes that cannot be

explained in terms of a physiological abnormality In this intriguing book Michael E Hyland proposes that there is a currently unrecognised type of illness which he calls dysregulatory disease Hyland shows how such diseases develop and how the communication and art of medicine good nursing care complementary medicine and psychotherapy can all act to reduce the dysregulation that leads to dysregulatory disease The Origins of Health and Disease is a fascinating book that develops a novel theory for understanding health and disease and demonstrates how this theory is supported by existing data and how it explains currently unexplained phenomena Hyland also shows how his theory leads to new testable predictions that in turn will lead to further scientific advancement and development

Circulating Regulatory Factors and Neuroendocrine Function Daniela Jezová,John C. Porter,2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents on the brain met at a satellite symposium of the XXXI International Congress of Physiological Sciences This symposium entitled Circulating Regulatory Factors and Neuroendocrine Function was held in Smolenice Castle Czechoslovakia June 26 July 1 1989 and reviews delivered at this symposium as invited presentations are published in this volume Presentations given as free communications have been published separately and are available in Endocrinologia Experimentalis 24 1 273 1990

**Cumulated Index Medicus** ,1995      *Temperature Regulation* A.S. Milton,2012-12-06 Many advances have been made in the field of thermoregulation in the past few years These include our understanding of Fever which is now considered not simply a rise in deep body temperature following infection but just one aspect though perhaps the most easily measured of the Acute Phase of the Immune Response Classification and identification of the Cytokines and the availability of recombinant material has greatly aided this research Similarly our understanding of the Hypothalamo Pituitary Adrenal Axis has altered our way of thinking about temperature regulation Of importance are the problems associated with adverse climatic conditions and survival and the problems encountered by the neonate and the hibernator At the biochemical level our knowledge of the control of heat production and the role of brown adipose tissue is rapidly advancing All these issues and many others were discussed at a Symposium Thermal Physiology 1993 held in Aberdeen Scotland in August 1993 under the

auspices of the Thermal Physiology Commission of the International Union of Physiological Sciences Six main aspects of the subject of temperature regulation are included in this book namely Fever including the Acute Phase of the Immune Response and Thermoregulatory Peptides Neurophysiology of Thermoregulation Neonatal Thermoregulation Mechanisms of Heat Production Ecological and Behavioural Thermoregulation and Emerging Themes in Thermoregulation Immunity in Compromised Newborns Per T. **Brain Control of Responses to Trauma** Nancy J. Rothwell, Frank Berkenbosch, 1994-09-15 Originally published in 1994 this was the first volume to look in depth at the way the brain responds to trauma and subsequently integrates and influences behavioural metabolic neurohumoral cardiovascular and immune functions At the time the role of the brain in the control and integration of the responses to injury and infection was becoming increasingly clear It had been established that some of these responses such as fever and neuroendocrine changes responded to the direct influence of the central nervous system These and other advances provided fresh insights into this area and formed a basis for the more effective understanding and clinical management of trauma patients In this volume the authors all international authorities in their fields discuss data from experimental and clinical studies and considered the implications of these findings for the treatment of the trauma patient
