### **The Psychology of Control and Aging**

Margret M. Baltes, Paul B. Baltes, 2014-08-01 Originally published in 1986 the central topic of this book is the analysis and application of control related beliefs and behaviours for theory and practice in the psychology of aging The volume was written for two specific interrelated purposes aimed at cross fertilization between the psychology of control and the field of gerontology The first purpose was to summarise available research and theory on the psychology of control for researchers and professionals interested in gerontology at the time The second was to enrich the field of the psychology of control

**Relationships as Developmental Contexts** W. Andrew Collins, Brett Laursen, 1999-03-01 The volume's topic was chosen in part because of the rapidly growing salience of dyadic research perspectives in developmental psychology but also in social psychology and in fields such as communication and family studies It provides the most complete representation now available on current theory and research on the significance of personal relationships in child and adolescent development This volume addresses the ways in which the study of social development has been altered by an emphasis on research questions and techniques for studying children and adolescents in the context of their significant dyadic relationships Leading scholars many of them pioneers in the concepts and methods of dyadic research have contributed chapters in which they both report findings from recent research and reflect on the implications for developmental psychology Their work encompasses studies of relationships with parents siblings friends and romantic partners Opening chapters set the stage by describing the key characteristics of social development research from a dyadic perspective and outlining key themes and contemporary issues in the field It concludes with commentaries from distinguished senior scholars identifying important directions for future research

Kindermann,Jaan

Valsiner,2013-06-17 Traditionally developmental psychology has its focus on individuals Developmentalists aim to describe regularities in individuals change and development across time to explain the processes and mechanisms that are involved in producing change and regularity and eventually to design strategies for optimization and modification of developmental pathways Although the role of contexts has always been of central concern for these purposes it is nevertheless quite surprising to note that compared to the effort devoted to individuals relatively little attention has been paid to the study of the nature and organization of their contexts This volume is an exploration of the idea that how we describe and explain human development will be closely tied to our understanding of what contexts are how individuals and contexts become influential for one another what contexts do to and with individuals and how contexts and their influences change themselves across time A major theme is whether the traditional dichotomy between individuals and their contexts may be artificial perhaps culturally biased and after psychologists have adhered to it for about a century may have become an impediment to increasing our understanding of developmental processes With this volume the editors contribute a serious consideration of development and systematic change to emerging models of person context relations and provide suggestions about how it may be possible to incorporate these notions in developmental research and theorizing **Understanding**

Parks, 2017-09-25 The effort to understand personal relationships has traditionally focused on the individual characteristics of participants Personal Relationships and Personal Networks takes this analysis a step further focusing on research linking participants feelings and actions within a given personal relationship to the larger social context surrounding it Author Malcolm R Parks expands on the idea that the initiation development maintenance and dissolution of relationships are inextricably connected to each participant's social network a perspective that allows for a better appreciation of our connection to the world and a greater understanding of our significant power as social actors This book offers a new way to consider basic notions about how relationships form such as how particular people meet and how relationships are started Among many findings the volume demonstrates that individuals in relationships feel closer and generally more connected when they also have a greater amount of contact with the members of each other's personal networks and when they believe that network members support their relationship Additional topics discussed include how this social context model is applicable to different types of relationships how participants interact with network members how social networks are involved in the deterioration of personal relationships and what drives change in relationships Students researchers and professionals in a wide variety of disciplines such as communication psychology sociology anthropology family studies clinical psychology public health nursing education and social work will find this book useful as will anyone seeking to better understand their own personal relationships
