**Handbook of Theories of Aging, Second Edition** Merrill Silverstein PhD, Vern L. Bengtson PhD, Norella Putney PhD, Daphna Gans PhD, 2008-10-27 The field of gerontology has often been criticized for being data rich but theory poor. The editors of this book address this issue by stressing the importance of theory in gerontology. While the previous edition focused on multidisciplinary approaches to aging theory, this new edition provides cross-disciplinary integrative explanations of aging theory. The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in adjacent fields in studying aging and age-related phenomena. This edition of the Handbook consists of 39 chapters written by 67 internationally recognized experts in the field of aging. It is organized in seven sections reflecting the major theoretical developments in gerontology over the past 10 years. Special Features: Comprehensive coverage of aging theory focusing on the biological, psychological, and social aspects of aging. A section dedicated to discussing how aging theory informs public policy. A concluding chapter summarizing the major themes of aging and offering predictions about the future of theory development. Required reading for graduate students and post-doctoral fellows. This textbook represents the current status of theoretical development in the study of aging.

*The Demography and Epidemiology of Human Health and Aging* Jacob S. Siegel, 2011-09-30 With this book Siegel, an internationally known demographer and gerontologist, has made a unique contribution to the fledgling fields of health demography and the demography and epidemiology of aging. The book represents a felicitous union of epidemiology, gerontology, and demography and appears to be the first and only comprehensive text on this subject now available. Drawing on a wide range of sciences in addition to demography, gerontology, and epidemiology, including medical sociology, biostatistics, public policy, bioethics, and molecular biology, the author treats theoretical and applied issues, links methods and findings, covers the material internationally, nationally, and locally, and while focusing on the elderly, treats the entire life course. The methods, materials, and perspectives of demography and epidemiology are brought to bear on such topics as the prospects for future increases in human longevity, the relative contribution of life style, environment, genetics, and chance in human longevity, the measurement of the share of healthy years in total life expectancy, the role of population growth in the rising costs of health care, and the applications of health demography in serving the health needs of local communities. The separate chapters systematically develop the topics of the sources and quality of health data, mortality, life tables, and the measurement of health status; the interrelationships of health on the one hand and mortality, fertility, migration, and age structure on the other; health conditions in the less developed countries; the concepts and theories of aging and projections of the aged population; and local health applications, public health policy, and bioethical issues in health demography. Given its comprehensiveness, clarity, interdisciplinary scope, and authenticity, this book appeals to a wide range of users, from students and teachers of medical sociology, the demography of aging, and public health studies to practitioners in these areas, both as a text in health demography and the demography, epidemiology of aging, and as a reference work in these fields.

**Public Health and Aging** Steven Mark Albert, 2004

Designated a Doody's Core Title, Public health and aging is a developing field standing between clinical geriatrics and the demography and epidemiology of aging. It has heretofore lacked a unified treatment or single framework; this text provides such a framework and offers a first synthesis of a burgeoning literature in geriatrics, gerontology, occupational therapy, epidemiology, demography, neuropsychology, rehabilitation medicine, social work, and public policy. Key concepts and tools that define the field of public health and aging, such as cohort analysis, the life table, age-sex pyramids, and risk stratification, are presented. A synthesis of the most productive measures of healthy aging, also of successful aging and frailty, sample studies, and clinical trials that address the question of age, health, and healthy old age are also included.

Age-associated Neurological Diseases Lüder Deecke, Peter Dal-Bianco, 2013-03-13. The papers compiled in this supplementum are a selection of the best contributions presented at the 19th Central European Neurological Symposium, CNS 19, held on June 29-July 1, 1989, in Vienna. The main topic of this conference was degenerative and age-associated neurological diseases. In recent decades, life expectancy has dramatically increased, at least in the industrialized countries. This has led to extreme distortions of the so-called population pyramids that no longer look like such but begin to almost resemble cylinders. As a consequence of this overaging of the population, diseases that are associated with age have become much more common than before. It was thus more than reasonable to devote a congress of the CNS series to these important neurological diseases. The following fields of interest are covered: Age-associated memory impairment (AAMI), Alzheimer's and other dementias, Parkinson's disease, and other movement disorders, stroke, and others. Concerning the dementias, some papers deal with diagnosis employing neuroimaging methods such as MRI, CT, PET, and SPECT; others using electrophysiological methods. An important aspect in the early preclinical diagnosis of dementia is the inclusion of neuropsychological tests to enhance the chance of effective early treatment. Also, drugs that are now under clinical investigation are discussed, and preliminary results are presented.

Anti-aging Drugs Alexander M. Vaiserman, 2017-02-01. Aging is a natural phenomenon that is peculiar to all living things. However, accumulating findings indicate that senescence could be postponed or prevented by certain approaches. Substantial evidence has emerged supporting the possibility of radical human health and lifespan extension, in particular through pharmacological modulation of aging. A number of natural dietary ingredients and synthetic drugs have been assumed to have geroprotective potential. In the development of anti-aging therapeutics, several cell, insect, and animal models may provide useful starting points prior to human studies. This book provides an overview of current research aimed to search for life-extending medications and describes pharmacological aspects of anti-aging medicine. Readers are introduced to the fascinating historical background of geroprotection in the first chapter. In-depth information on models for investigating geroprotective drugs precedes a section covering anti-aging properties of pharmaceutical compounds such as calorie restriction mimetics, autophagy inducers, senolytics, and mitochondrial antioxidants. Finally, strategies to translate discoveries from aging research into drugs and healthcare policy

perspectives on anti ageing medicine are provided to give a complete picture of the field A timely and carefully edited collection of chapters by leading researchers in the field this book will be a fascinating and useful resource for pharmacologists gerontologists and any scientifically interested person wishing to know more about the current status of research into anti aging remedies challenges and opportunities **The Biostatistics of Aging** Gilberto Levy, Bruce Levin, 2014-02-11 A practical and clarifying approach to aging and aging related diseases Providing a thorough and extensive theoretical framework The Biostatistics of Aging From Gompertzian Mortality to an Index of Aging Relatedness addresses the surprisingly subtlety with consequential biomedical and public health relevance of what it means for a condition to be related to aging In this pursuit the book presents a new quantitative method to examine the relative contributions of genetic and environmental factors to mortality and disease incidence in a population With input from evolutionary biology population genetics demography and epidemiology this medically motivated book describes an index of aging relatedness and also features Original results on the asymptotic behavior of the minimum of time to event random variables which extends those of the classical statistical theory of extreme values A comprehensive and satisfactory explanation based on biological principles of the Gompertz pattern of mortality in human populations The development of an evolution based model of causation relevant to mortality and aging related diseases of complex etiology An explanation of how and why the description of human mortality by the Gompertz distribution can be improved upon from first principles The amply illustrated analysis of real world data including a program for conducting the analysis written in the freely available R statistical software Technical appendices including mathematical material as well as an extensive and multidisciplinary bibliography on aging and aging related diseases The Biostatistics of Aging From Gompertzian Mortality to an Index of Aging Relatedness is an excellent resource for practitioners and researchers with an interest in aging and aging related diseases from the fields of medicine biology gerontology biostatistics epidemiology demography and public health **And a Time to Die** Sharon

Kaufman, 2005-04-19 A reassuring and illuminating examination on our conflicting wishes about the end of life how the politics and routines of the American hospital have formed our understanding and experience of death and ultimately why what we consider a good death is so hard to attain In a penetrating and revelatory study medical anthropologist Dr Sharon Kaufman uses two years of intensive observations and interviews with scores of patients family members physicians nurses social workers and other staff at several community hospitals in California to explore the heart of a science driven yet fractured and often irrational world of health care delivery where empathetic yet frustrated hard working yet constrained professionals both respond to and create the anxieties and often inchoate expectations of patients and families who must make decisions they are ill prepared to make She sought out the critically ill the dying and their friends and relatives She followed patients from admission to death days weeks or sometimes months later through what is often for them and their families a Kafkaesque journey She asked hospital staff what they were doing and why and stood beside doctors and nurses

observing their work cynicism compassion and frustration And she paid close attention to the most important player of all the hospital bureaucracy and how it impacts the manner and timing of patient death Her investigative research links together the emotional experiences of patients and families the dedicated work of hospital staff and the ramifications of institutional bureaucracy to show the invisible power of the hospital system itself its rules mandates and daily activity in organizing death and individual experience of it The book is the story of real patients and their families an account of what drives the American hospital today and a report on the complex sources and implications of doing something about death *GHRH, GH, and IGF-I* Marc R. Blackman, S. Mitchell Harman, Jesse Roth, Jay R. Shapiro, 1995-06-02 Recent research suggests that adult growth hormone GH deficiency whether of pathological or physiological origin is associated with a distinct syndrome that includes alterations in body composition endocrine metabolic function immune competence and physical and psychosocial well being Not surprisingly substantial investigative effort is currently focused on validating the above hypothesis and on determining whether restoration of a normal GH IGF I axis in various states of adult GH deficiency is clinically useful safe and cost beneficial This book contains the proceedings from the Symposium on GHRH GH and IGF I Basic and Clinical Advances held December 9 to 12 1993 in San Diego California and sponsored by Serono Symposia USA Inc The conference was meant to highlight selected novel and exciting clinical research developments related to possible therapeutic uses of recombinant human GH and IGF I GHRH GH releasing peptides and related GH secretagogues This meeting occurred only one year after a similar Serono symposium that was somewhat more oriented to novel basic science discoveries thus attesting to the current scientific and clinical interest in this area
