Reliability And Uncertainty Analyses In Hydraulic Design:

Reliability and Uncertainty Analyses in Hydraulic Design Ben Chie Yen, Yeou-Koung Tung, 1993-01-01 Prepared by the Subcommittee on Uncertainty and Reliability Analyses in Design of Hydraulic Structures of the Technical Committee on Probabilistic Approaches to Hydraulics of ASCE This report contains 13 papers presenting the application of reliability analysis to the design and safety of hydraulic structures Several recent major failures of engineering systems have raised public concern on the safety and reliability of engineering structures Decades ago a quantitative evaluation of the reliability of structures was not possible and engineers used safety factors that were determined mainly through experience and judgement Recent advances in probability methods and computers make it feasible to evaluate the contributions of various technologic and natural factors to the safety and reliability of structures The first four papers in this report discuss techniques pertinent to reliability and uncertainty analyses The next nine papers explore how these techniques can be applied to dam safety coastal floods and hydraulic structures The report concludes with a reprint of an article by Vrijling on the Eastern Scheldt Storm Surge Barrier of the Delta Project in the Netherlands and the use of reliability analysis for sewer design

Reliability and Uncertainty Analyses in Hydraulic Design Ben Chie Yen, American Society of Civil Engineers. Ayyub, 1997-12-29 With the expansion of new technologies materials and the design of complex systems the expectations of society upon engineers are becoming larger than ever Engineers make critical decisions with potentially high adverse consequences The current political societal and financial climate requires engineers to formally consider the factors of uncertainty e g floods earthquakes winds environmental risks in their decisions at all levels Uncertainty Modeling and Analysis in Civil Engineering provides a thorough report on the immediate state of uncertainty modeling and analytical methods for civil engineering systems presenting a toolbox for solving problems in real world situations Topics include Neural networks Genetic algorithms Numerical modeling Fuzzy sets and operations Reliability and risk analysis Systems control Uncertainty in probability estimates This compendium is a considerable reference for civil engineers as well as for engineers in other disciplines computer scientists general scientists and students

Hydrosystems Engineering Uncertainty Analysis Yeou-Koung Tung, Ben-Chie Yen, 2005-04-14 Failure of hydrosystems such as dams levees storm sewers or pollution control systems pose threats to the public safety and health as well as potentially inflict enormous damages on properties and environments Many failures of hydrosystems are mainly attributed by the existence of various uncertainties including inherent natural randomness and the lack of complete understanding of involved geophysical processes It is therefore

essential to systematically quantify the degree of uncertainty for the problem in hand so that reliability assessment and risk based design of hydrosystems can be made The conventional approach of frequency analysis of heavy rainfalls or large floods consider only portion of the uncertainties involved in hydrosystem engineering problems Over the past two decades or so there has been a steady growth on the development and application of uncertainty analysis techniques in hydrosystems engineering and other disciplines The aim of this book is to bring together these uncertainty analysis techniques in one book and to demonstrate their applications and limitations for a wide variety of hydrosystem engineering problems

Flood Issues in Contemporary Water Management J. Marsalek,W. Ed Watt,Evzen Zeman,Friedhelm Sieker,2012-12-06 In 1997 disastrous flooding running through the Czech Republic Poland Germany took the lives of a great number of people and caused economic damage estimated in tens of billions of dollars Flooding of the Yangtze river in 1998 killed more than 3000 people dislocated 230 million souls and caused direct damage of more than 45 billion Both the general public and the experts are asking what we can learn from these recent events to reduce loss of life and flood damage The 1997 floods were dealt with by experts from the Czech Republic Poland and Germany who presented timely reports on combatting floods both success stories and shortcomings This experience is further extended by reports from experts drawn from 13 other countries developing a broad overview of flood risk management covering the ecosystem approach to flood management including socioeconomic issues flood impacts on water quality human health and natural ecosystems

Application of Frequency and Risk in Water Resources V.P. Singh, 2012-12-06 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are responsible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14-17 1986 at Louisiana State University Baton Rouge Louisiana

Biomimetic Membranes for Sensor and Separation Applications Claus Hélix-Nielsen, 2012-01-02 This book addresses the possibilities and challenges in mimicking biological membranes and creating membrane based sensor and separation devices Recent advances in developing biomimetic membranes for technological applications will be presented with focus on the use of integral membrane protein mediated transport for sensing and separation It describes the fundamentals of biosensing as well as separation and shows how the two processes are working in a cooperative manner in biological systems Biomimetics is a truly cross disciplinary approach and this is exemplified using the process of forward osmosis will be presented as an illustration of how advances in membrane technology may be directly stimulated by an increased understanding of biological membrane transport In the development of a biomimetic sensor separation technology both channels ion and water channels and carriers transporters are important An ideal sensor separation device requires the supporting biomimetic matrix to be virtually impermeable to anything but the solute in question In practice however a biomimetic support matrix will generally have finite permeabilities to water electrolytes and non electrolytes These non protein mediated membrane transport contributions will be presented and the implications for biomimetic device construction will be discussed New developments in our understanding of the reciprocal coupling between the material properties of the biomimetic matrix and the embedded proteins will be presented and strategies for inducing biomimetic matrix stability will be discussed Once reconstituted in its final host biomimetic matrix the protein stability also needs to be maintained and controlled Beta barrel proteins exemplified by the E Coli outer membrane channels or small peptides are inherently more stable than alpha helical bundle proteins which may require additional stabilizing modifications The challenges associated with insertion and stabilization of alpha helical bundle proteins including many carriers and ligand and voltage gated ion and water channels will be discussed and exemplified using the aquaporin protein Many biomimetic membrane applications require that the final device can be used in the macroscopic realm Thus a biomimetic separation device must have the ability to process hundred of liters of permeate in hours effectively demanding square meter size membranes Scalability is a general issue for all nano inspired technology developments and will be addressed here in the context biomimetic membrane array fabrication Finally a robust working biomimetic device based on membrane transport must be encapsulated and protected yet allowing massive transport through the encapsulation material This challenge will be

discussed using microfluidic design strategies as examples of how to use microfluidic systems to create and encapsulate biomimetic membranes The book provides an overview of what is known in the field where additional research is needed and where the field is heading *Climate* Igor Linkov, Todd S. Bridges, 2011-08-26 Rising sea levels and altered weather patterns are expected to significantly alter coastal and inland environments for humans infrastructure and ecosystems Potential land use changes and population increases coupled with uncertain predictions for sea level rise and storm frequency intensity represent a significant planning challenge While efforts to mitigate climate change continue plans must be made to adapt to the risks that climate change poses to humans infrastructure and ecosystems alike This book addresses integrated environmental assessment and management as part of the nexus of climate change adaptation Risk analysis has emerged as a useful approach to guide assessment communication and management of security risks However with respect to climate change an integrated multi criteria multi hazard risk informed decision framework is desirable for evaluating adaptation strategies The papers in Part 1 summarize societal and political needs for climate change adaptation Part 2 includes papers summarizing the state of the art in climate change adaptation Three further parts cover the process of change in coastal regions in inland regions and finally the potential challenges to homeland security for national governments Each of these parts reviews achievements identifies gaps in current knowledge and suggests research priorities
