Science Activities Using The World Wide Web:

The Art of Teaching Science Jack Hassard, Michael Dias, 2013-07-04 The Art of Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical learning tools. These tools involve inquiry and experimentation, reflection through writing and discussion, as well as experiences with students, science curriculum and pedagogy. Becoming a science teacher is a creative process, and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, professionals, and instructors, and through hands-on activities designed to foster a collaborative, thoughtful learning environment. *Internet Environments for Science Education* Marcia C. Linn, 2013-07-04 Internet Environments for Science Education synthesizes 25 years of research to identify effective technology-enhanced ways to convert students into lifelong science learners, one inquiry project at a time. It offers design principles for development of innovations, features tested, customizable inquiry projects that students, teachers, and professional developers can enact and refine, and introduces new methods and assessments to investigate the impact of technology on inquiry learning. The methodology design-based research studies enables investigators to capture the impact of innovations in the complex, inertia-laden educational enterprise and to use these findings to improve the innovation. The approach technology-enhanced inquiry takes advantage of global networked information resources, sociocognitive research, and advances in technology combined in responsive learning environments. Internet Environments for Science Education advocates leveraging inquiry and technology to reform the full spectrum of science education activities, including instruction, curriculum, policy, professional development, and assessment. The book offers the knowledge integration perspective on learning, featuring the interpretive, cultural, and deliberate natures of the learner, the scaffolded knowledge integration framework on instruction, summarized in meta-principles and pragmatic principles for design of inquiry instruction, a series of learning environments including the Computer as Learning Partner (CLP), the Knowledge Integration Environment (KIE), and the Web-based Inquiry Science Environment (WISE) that designers can use to create new inquiry projects, customize existing projects, or inspire thinking about other learning environments, curriculum design patterns for inquiry projects, describing activity sequences to promote critique, debate, design, and investigation in science, a partnership model establishing activity structures for teachers, pedagogical researchers, discipline experts, and technologists to jointly design and refine inquiry instruction, a professional development model involving mentoring by an expert teacher, projects about contemporary controversy enabling students to explore the nature of science, a customization process guiding teachers to adapt inquiry projects to their own students, geographical characteristics, curriculum framework, and personal goals, and a Web site providing additional links, resources, and community tools at www.InternetScienceEducation.org. Geoethics S. Peppoloni, G. Di Capua, 2015-08-24 This Special Publication will be an important tool for geoscientists aimed at increasing the awareness of their societal role and responsibility in conducting education research and practice activities What are the responsibilities of a geoscientist And what motivations are needed to push geoscientists to practice the Earth sciences in an ethical way The major environmental challenges affecting human communities require not only a strictly scientific and technical preparation by the geoscientists but also a reflection on their broader obligations towards society It is important that geoscientists consider geoethics as an indispensable framework on which to base their training and activity The principles of geoethics can guide them to pursue the common good by weighing the benefits and costs of each choice and identifying eco friendly and society friendly solutions that guarantee the respect of the right balance between human life and the dynamics of the Earth Communication and dissemination of geosciences should become core activities in building a knowledge based society which is able better to protect itself and the Earth ecosystems in order to guarantee a life in harmony with our planet for future generations
