The Complete Story of Civilization Will Durant, 2014-01-21 The Complete Story of Civilization by Will Durant represents the most comprehensive attempt in our times to embrace the vast panorama of man s history and culture This eleven volume set includes Volume One Our Oriental Heritage Volume Two The Life of Greece Volume Three Caesar and Christ Volume Four The Age of Faith Volume Five The Renaissance Volume Six The Reformation Volume Seven The Age of Reason Begins Volume Eight The Age of Louis XIV Volume Nine The Age of Voltaire Volume Ten Rousseau and Revolution Volume Eleven The Age of Napoleon **Patronage and Royal Science in Seventeenth-Century France** David S. Lux, 2019-06-30 A unique study in the culture of seventeenth century French science Patronage and Royal Science in Seventeenth Century France focuses on the brief revolutionary period 1650 1680 that launched Europe s New Age of Academies David S Lux provides a lively account of one of the most intriguing scientific institutions in Louis XIV s France the Academie de Physique de Caen organized in 1662 Lux investigates why this promising institution with a talented membership and sympathetic

private patrons foundered after it was provided royal support finally to close its doors in 1672 Drawing upon hitherto unexploited archival materials the author discovers the circumstances of one institution's failure and develops a provocative new interpretation of the shift from privately funded to state funded science in France during the second half of the seventeenth century *Lux* provides a rare view of the everyday concerns of seventeenth century science as it was practiced by those other than the immortals of the Scientific Revolution Patronage and Royal Science in Seventeenth Century France will interest sociologists of science and philosophers of science as well as historians particularly those who work on early modern science and scientific institutions and French cultural history Power and Politics in Old Regime France, 1720-1745 Peter Campbell, 2003-10-04 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company Science and Social Status David J. Sturdy, 1995 This comprehensive survey of the members of France's Academie des Sciences to the 1750s takes up the challenge to search for a way to connect history of science with social and cultural history at the bottom the level of the scientists rather than at the top the level of philosophical debate about science and culture T L Hankins In Defence of Biography the Use of Biography in the History of Science in History of Science 17 1979 1 16 The book focuses primarily on the academicians themselves and although it has much to say about the Academie as an institution it does so in the light of the changing positions which the academicians occupied in the social hierarchy of early modern France It explores the implications of those changes for the development of the Academie down to the mid 1700s and it argues that throughout this period the the relationship which the Academie had with the Bourbon regime and with French society in general was governed to a large extent by the personal circumstances of the academicians The Social Philosophy of Ernest Gellner, 2023-12-28 **The Rise of the Fiscal State in Europe c.1200-1815** Richard Bonney, 1999-09-02 In this volume an international team of scholars builds up a comprehensive analysis of the fiscal history of Europe over six centuries It forms a fundamental starting point for an understanding of the distinctiveness of the emerging European states and highlights the issue of fiscal power as an essential prerequisite for the development of the modern state The study underlines the importance of technical developments by the state its capacity to innovate and however imperfect the techniques the greater detail and sophistication of accounting practice towards the end of the period New taxes had been developed new wealth had been tapped new mechanisms of enforcement had been established In general these developments were made in western Europe the lack of progress in some fiscal systems especially those in eastern Europe is an issue of historical importance in its own right and lends particular significance to the chapters on Poland and Russia By the eighteenth century mountains of debt and high debt revenue ratios had become the norm in western Europe yet in the east only Russia was able to adapt to the western model by 1815 The capacity of governments to borrow and the interaction of the constraints on borrowing and the power to tax had become the real test of the fiscal powers of the modern state by 1800 15 1668 Peter Sahlins, 2017-11-09 When animals and their symbolic representations in the Royal Menagerie in art

in medicine in philosophy helped transform the French state and culture Peter Sahlins's brilliant new book reveals the remarkable and understudied animal moment in and around 1668 in which authors including La Fontaine whose Fables appeared in that year anatomists painters sculptors and especially the young Louis XIV turned their attention to nonhuman beings At the center of the Year of the Animal was the Royal Menagerie in the gardens of Versailles dominated by exotic and graceful birds In the unfolding of his original and sophisticated argument Sahlins shows how the animal bodies of the menagerie and others were critical to a dramatic rethinking of governance nature and the human The animals of 1668 helped to shift an entire worldview in France what Sahlins calls Renaissance humanimalism toward more modern expressions of classical naturalism and mechanism In the wake of 1668 came the debasement of animals and the strengthening of human animality including in Descartes's animal machine highly contested during the Year of the Animal At the same time Louis XIV and his intellectual servants used the animals of Versailles to develop and then to transform the symbolic language of French absolutism Louis XIV came to adopt a model of sovereignty after 1668 in which his absolute authority is represented in manifold ways with the bodies of animals and justified by the bestial nature of his human subjects 1668 explores and reproduces the king's animal collections in printed text weaving poetry and engraving all seen from a unique interdisciplinary perspective Sahlins brings the animals of 1668 together and to life as he observes them critically in their native habitats within the animal palace itself by Louis Le Vau the paintings and tapestries of Charles Le Brun the garden installations of Andr  Le N tre the literary work of Charles Perrault and the natural history of his brother Claude the poetry of Madeleine de Scud ry the philosophy of Ren  Descartes the engravings of Sbastien Leclerc the transfusion experiments of Jean Denis and others The author joins the nonhuman and human agents of 1668 panthers and painters swans and scientists weasels and weavers in a learned and sophisticated treatment that will engage scholars and students of early modern France and Europe and readers broadly interested in the subject of animals in human history [The Reproduction of Life Death](#)

Dawne McCance, 2019-07-02 During the 1975-76 academic year Jacques Derrida delivered a seminar *La vie la mort* Life Death at the cole normale sup rieure in Paris Based on archival translations of this untapped but soon to be published seminar *The Reproduction of Life Death* offers an unprecedented study of Derrida's engagement with molecular biology and genetics particularly the work of the biologist Fran ois Jacob Structured as an itinerary of three rings each departing from and coming back to Nietzsche Derrida's seminar ties Jacob's logocentric account of reproduction to the reproductive program of teaching that characterizes the academic institution challenging this mode of teaching as auto reproduction along with the concept of academic freedom on which it is based McCance also brings Derrida's critique of Jacob's theory of auto reproduction together with his reading of reproductivity the tendency to repeat reproduce that is theorized and enacted in Freud's *Beyond the Pleasure Principle* The book further shows how Derrida's account of life death relates to his writings on autobiography and the signature and to such later concerns as the question of the animal McCance brings extensive archival

research together with a deep knowledge of Derrida's work a background in genetics to offer a fascinating new account of an encounter between philosophy and the hard sciences that will be of interest to theorists in a wide range of disciplines concerned with the question of life

The Collapse of Mechanism and the Rise of Sensibility Stephen

Gaukroger, 2010-11-25 Understanding the emergence of a scientific culture one in which cognitive values generally are modelled on or subordinated to scientific ones is one of the foremost historical and philosophical problems with which we are now confronted The significance of the emergence of such scientific values lies above all in their ability to provide the criteria by which we come to appraise cognitive enquiry and which shape our understanding of what it can achieve The period between the 1680s and the middle of the eighteenth century is a very distinctive one in this development It is then that we witness the emergence of the idea that scientific values form a model for all cognitive claims It is also at this time that science explicitly goes beyond technical expertise and begins to articulate a world view designed to displace others whether humanist or Christian But what occurred took place in a peculiar and overdetermined fashion and the outcome in the mid eighteenth century was not the triumph of reason as has commonly been supposed but rather a simultaneous elevation of the standing of science and the beginnings of a serious questioning of whether science offers a comprehensive form of understanding The Collapse of Mechanism and the Rise of Sensibility is the sequel to Stephen Gaukroger's acclaimed 2006 book The Emergence of a Scientific Culture It offers a rich and fascinating picture of the development of intellectual culture in a period where understandings of the natural realm began to fragment
