Science and the arts Jacob Oppen, 1973 *Science and the Arts* Jacob Oppen, 1973 Deals with the philosophical implications of natural science in the various humanistic disciplines during the 17th 18th and 19th centuries Remarkable in combining and relating numerous disparate disciplines in the arts and sciences *Information Arts* Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use and even influence science and technology A new breed of contemporary artist engages science and technology not just to adopt the vocabulary and gizmos but to explore and comment on the content agendas and possibilities Indeed proposes Stephen Wilson the role of the artist is not only to interpret and to spread scientific knowledge but to be an active partner in determining the direction of research Years ago C P Snow wrote about the two cultures of science and the humanities these developments may finally help to change the outlook of those who view science and technology as separate from the general culture In this rich compendium Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics the physical sciences biology kinetics telecommunications and experimental digital systems such as artificial intelligence and ubiquitous computing In addition to visual documentation and statements by the artists Wilson examines relevant art theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future He also provides lists of resources including organizations publications conferences museums research centers and Web sites

Samuel Johnson's Pragmatism and Imagination Stefka Ritchie, 2018-11-07 The central theme of this book is an under studied link between the canon of Francis Bacon's and Isaac Newton's scientific and philosophical thought and Samuel Johnson's critical approach that can be traced in a textual study of his literary works The interpretive framework adopted here encourages familiarity with the history and philosophy of science confirming that the history of ideas is an entirely human construct that constitutes an integral part of intellectual history This further endorses the argument that

intermediality can only be of benefit to future research into the richness of Johnson's literary style As perceived boundaries are crossed between conventionally distinct communication media the profile of Johnson that emerges is of a writer of passionate intelligence who was able to combine a pragmatic approach to knowledge with flights of imagination as a true artist *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70

Environmental Apocalypse in Science and Art Sergio Fava, 2013 At a time when it is clear that climate change adaptation and mitigation are failing this book examines how our assumptions about valid and usable knowledge are preventing effective climate action Through a cross disciplinary empirically based analysis of climate science and policy the book situates the failures of climate policy in the cultural history of prediction and its interfaces with policy Fava calls into question the current interfaces between scientific research and climate policy by tracing multiple connections between modelling epistemology politics food security religion art and the apocalyptic Demonstrating how the current domination of climate policy by models and scenarios is part of the problem the book examines how artistic practices are a critical location to ask questions differently rethink environmental futures and activate social change The analysis starts with another moment of climatic change in recent western history the overlap of the Little Ice Age and the scientific revolution during which intense climatic scientific and political change were contemporary with mathematical calculation of the apocalypse Dealing with the need for complex answers to complex and urgent questions this is essential reading for those interested in climate action interdisciplinary research and methodological innovation The empirical analyses amount to a methodological experiment across history of science theology art theory and history architecture future studies climatology computer modelling and agricultural policy This book is a major contribution to understanding how we are precluding effective climate action and designing futures that resemble our worst nightmares Instrumental Teaching in Nineteenth-Century Britain David Golby, 2016-06-17 First published in 2004 this book demonstrates that while Britain produced many fewer instrumental virtuosi than its foreign neighbours there developed a more serious and widespread interest in the cultivation of music throughout the nineteenth century Taking a predominantly historical approach the book moves from a discussion of general developments and issues to a detailed examination of violin pedagogy method and content which indicates society's influence on cultural trends and informs the discussion of other instruments and institutional training that follows In the first study of its kind it examines in depth the inextricable links between trends in society education and levels of achievement It also extends beyond profession and art music to amateur and popular spheres A useful chronology of developments in nineteenth century British music education is also included This book will be of interest to those studying the history of instrumental teaching and Victorian music **Bibliography of the History of Medicine** ,
