Environmental Science Services Administration, 1968 *Earth Science and Applications from Space* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of NASA's Earth Science Program, 2012-09-03 Understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system NASA responded favorably and aggressively to this survey embracing its overall recommendations for Earth observations missions technology

investments and priorities for the underlying science. As a result, the science and applications communities have made significant progress over the past 5 years. However, the Committee on Assessment of NASA's Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved. Exacerbating the budget shortfalls, NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope, increases in launch vehicle costs, and/or the lack of availability of a medium class launch vehicle. Underestimation of costs by the decadal survey and unfunded programmatic changes that were required by Congress and the Office of Management and Budget. In addition, the National Oceanic and Atmospheric Administration (NOAA) has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls. Earth Science and Applications from Space: A Midterm Assessment of NASA's Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey. The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space, a key recommendation of the 2007 decadal survey that remains unfulfilled.

The Global Insurance Market and Change Anthony A Tarr, Julie-Anne Tarr, Maurice Thompson, Dino Wilkinson, 2023-10-17. This book focuses on the global landscape in which insurance is transacted and where it is evolving, driven from within by transformative technologies and externally by the necessity to address risks like climate change and health crises such as the COVID-19 pandemic. It discusses the dynamic challenges and opportunities that lie ahead for the industry in areas such as on-demand insurance, embedded insurance, parametric insurance, autonomous vehicles, the rise of fintech, the cyber risk landscape, and through initiatives driven by distributed ledger technology or blockchain solutions. Moreover, it covers the major external challenges confronting the global insurance market, such as the growing insurance protection gap in relation to the affordability and insurability of natural catastrophes and climate change and pandemics like COVID-19. This book examines innovations in insurance driven by the industry as well as externally imposed changes and dynamics impacting the industry. It describes these changes, the industry's responses, and the legal framework in which they occur. It canvasses additional regulatory and law reform initiatives that may be necessary to achieve an effective balance between the various competing interests. The book is the first to address these matters holistically, with a particular focus upon insurance law. It will describe these changes and industry responses and the legal framework in which they occur. The Global Insurance Market will be directly relevant to legal professionals, insurers, insurtechs, fintechs, brokers, CEOs of insurance companies, risk managers, legal counsel, academics, researchers, the judiciary, and policy makers. It will also serve as a valuable resource for students of all levels.
